In particular, the amount of the share account (s_i) of Clearing Member (i) shall be calculated using the following formula:

$$\mu_i = \max \left(\alpha \cdot \sum_{k=1}^{N(i)} \left(\frac{\sum_{j=1}^{M_{k,i}} M(k,i,j)}{M_{k,i}} \right), \text{Minimum Contribution}(i) \right)$$

where:

$N(i)$: The total number of Clearing Accounts of Clearing Member i in the calculation period.

$M(k,i,j)$: The Margin of Clearing Account k of Clearing Member i computed at the end of session j. If the margin is calculated in a currency other than euro, the value of the margin shall be converted into euros using the exchange rate on the last day of the calculation period.

When adjusting the Default Fund, ATHEXClear shall apply a methodology by which it shall check, for the calculation period, if the amount of the Default Fund as calculated in accordance with the previous paragraph, would be sufficient to cover losses beyond the Margins under extreme but plausible market conditions (stress testing), that may arise in case of default of a Clearing Member in which the System has the greatest risk exposure or of the second and third Clearing Members, if the cumulative exposure is higher, taking into account the dependencies of their groups, based also on applicable provisions. It shall check whether the Default Fund and the Special Own Resources of ATHEXClear would be sufficient to cover loss in case of default of the Clearing Members ranking first and second in terms of exposure, taking into account the dependencies of their groups, based also on applicable provisions. In case of insufficiency, ATHEXClear shall modify the Contribution Rate under Article 6.4.1 of this PART, adjusting the amount of the share account of each Clearing Member, so as to meet, taking into account the adjusted Default Fund, the above requirements.  - b) it shall analyze and monitor the liquidity risk by conducting at least daily stress tests of its liquid financial resources. In case of insufficiency, it shall decide to cover the shortfall by increasing the resources available, which may include increasing the Default Fund, increasing the margins that must be covered by cash for one or more Clearing Accounts or increasing the Special Own Resources or securing liquidity lines with credit institutions.

3. In the cases of the preceding paragraphs ATHEXClear shall, for the purpose of calculating the amount of the extraordinary contributions, apply the procedure under Article 6.4.1 of this Part or, if it finds it necessary, it may establish additional parameters in the calculation to protect the market, and also determine the calculation period as appropriate, taking account of the general conditions of calculation and market conditions. ATHEXClear shall promptly communicate its relevant decision to the HCMC.

3. The Clearing Member may change the percentages of allocation of the Credit Limit of each Clearing Account to the Market Members at the meeting. 4. Where a declaration is made for the increase of the Credit Limit of a Market Member, the allocation of the Credit Limit by a General Clearing Member per Clearing Account shall not exceed, per Market Member or for all the Market Members, whose transactions it clears through the relevant Clearing Account, the Credit Limit of the Clearing Account of the Clearing Member, as such Credit Limit stands each time at the moment of the allocation according to the terms of the next paragraph.
5. During the market session and at regular intervals the Credit Limit shall be recomputed (increase or drop) for each Clearing Account, considering, particularly, the value of the collateral given, the Margin requirement, the (positive or negative) difference in Futures valuation, the trading risk for all relevant Subaccounts pursuant to point 6, and outstanding amounts relating to payments or collections out of the purchase or sale of options throughout the day. ATHEXClear shall by its resolution establish the frequency of and method for recomputing the credit limit per Clearing Account during the meeting.
6. During the session of the Market, ATHEXClear shall gradually subtract from the Credit Limit of each Clearing Member, per Clearing Subaccount and Market Member, the Credit Limit it has consumed based on unexecuted orders entered by the Market Member in the Market, and the transactions it has completed during the relevant meeting and using such method as is established by ATHEXClear in its resolution.
7. If there is no available coverage for the relevant Subaccount and Market Member, the Credit Limit of the Clearing Member shall be zero for them and the consequences of prohibiting the entry of orders shall apply in accordance with Article 7.7 (7) of this PART.
8.
