

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

Forward-Looking Statements

This document contains certain forward-looking statements which can usually be identified by terms used such as 'expect', 'should be', 'will be' and similar expressions or variations thereof or their negative variations, but their absence does not mean that a statement is not forward-looking. Examples of forward looking statements include, but are not limited to, statements relating to the Bank of Cyprus Holdings Group's (the 'Group') near term and longer term future capital requirements and ratios, intentions, beliefs or current expectations and projections about the Group's future results of operations, financial condition, the level of the Group's assets, liquidity, performance, return of tangible equity, projected levels of growth, capital distributions (including policy on dividends and share buybacks), prospects, anticipated growth, provisions, impairments, business strategies and opportunities, any commitments and targets (including environmental, social and governance (ESG) commitments and targets).

By their nature, forward-looking statements involve risk and uncertainty because they relate to events, and depend upon circumstances, that will or may occur in the future. Factors that could cause actual business, strategy and/or results to differ materially from the plans, objectives, expectations, estimates and intentions expressed in such forward-looking statements made by the Group include but are not limited to: general economic and political conditions in Cyprus and other European Union (EU) Member States. Globally, factors that may impact the Group include interest rate and foreign exchange rate fluctuations, legislative, fiscal and regulatory developments, litigation and other operational risks, adverse market conditions, geopolitical developments, imposed and threatened tariffs and changes to global trade policies, acts of hostility or terrorism and response to those acts or other such events, emerging technologies, including information technology, artificial intelligence, technological changes and risks to the security of IT and operational infrastructure, systems, data and information resulting from increased threat of cyber and other attacks and the impact of outbreaks, epidemics or pandemics, as well as uncertainty over the scope of actions that may be required by the Group, governments and other to achieve goals relating to climate, environmental and social matters, as well as the evolving nature of underlying science and industry and governmental standards and regulations. These factors may have significant adverse effects on the market and macroeconomic conditions, including in ways that cannot be anticipated. This creates significantly greater uncertainty about forward-looking statements. Should any one or more of these or other factors materialise, or should any underlying assumptions prove to be incorrect, the actual results or events could differ materially from those currently being anticipated as reflected in such forward-looking statements. Further, forward-looking statements may be affected by changes in reporting frameworks and accounting standards, including practices with regard to the interpretation and application thereof and emerging and developing ESG reporting standards.

The forward-looking statements made in this document are only applicable as at the date of publication of this document. Except as required by any applicable law or regulation, the Group expressly disclaims any obligation or undertaking to release publicly any updates or revisions to any forward-looking statement contained in this document to reflect any change in the Group's expectations or any change in events, conditions or circumstances on which any statement is based.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

1. Executive Summary

The executive summary discloses a high-level summary of the risk profile of Bank of Cyprus Holdings Public Limited Company Group (the 'Group'), and its interaction with its risk appetite. Bank of Cyprus Holdings Public Limited Company (the 'Company' or 'BOCH') is the holding company of Bank of Cyprus Public Company Limited (the 'Bank' or 'BOC PCL'). The Group comprises the Company, its subsidiary BOC PCL and the subsidiaries of BOC PCL. Risk appetite describes the types and level of risk that the Group chooses to accept in pursuit of its strategy whilst at the same time fulfilling regulatory requirements.

The Group is a leading player in the financial sector in Cyprus, with a diversified and sustainable business model. The Group's financial performance for the year ended 31 December 2025 remained strong delivering ROTE of 18.6% and earnings per share of €1.10. The Group experienced strong volume growth in deposits and loans in the year, enhancing the resilience of the Group's net interest income on lower interest rates, and maintained strong cost discipline and asset quality. As a result, the Group's tangible book value per share continued to improve, growing by 6% on prior year to €6.10.

The Group remains focused on growing revenues in a more capital efficient way through growth of high-quality new lending and the growth in areas such as insurance and digital products, that provide further market penetration and diversification through non-banking operations. The Group has continued to provide high quality new lending in 2025 via prudent underwriting standards. Growth in new lending in Cyprus has been focused on selected industries in line with the Bank's target risk profile.

Striving for a lean operating model is a key strategic pillar for the Group in order to deliver shareholder value, without constraining investment in the business and funding of its digital transformation.

Strategy and Outlook

The Group's key priorities are to continue to generate sustainable and resilient profitability and deliver attractive shareholder returns, while simultaneously supporting the Group's stakeholders and the broader economic environment. The main drivers to accomplish these priorities are the following:

- **Generate high quality revenue growth** through domestic loan growth and selective expansion of international loan portfolio and growth in both banking and non-banking areas (such as capital-light insurance revenues) to grow recurring non-interest income and to complement the strength of the domestic franchise.
- **Maintain sustainable and resilient profitability** via ongoing cost management discipline while continuing to invest in IT, including AI and maintaining low cost of risk in order to retain a low-risk business model.
- **Achieve strong capital generation and upscaled distributions** by maintaining high capital strength, whilst gradually returning excess, investing the surplus capital for long-term value and maintaining strategic optionality.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

1. Executive Summary (continued)

The following key metrics reflect largely the Group's risk profile.

	2025	2024 (Pro forma) ^{1, 2}
Key Balance sheet ratios		
NPE ratio	1.20%	2.00%
NPE coverage ratio	139%	82%
Cost of risk (bps)	33	30
Liquidity Coverage Ratio (LCR)	321%	309%
Net Stable Funding Ratio (NSFR)	171%	162%
Capital ratios and Risk Weighted Assets		
	2025 (Regulatory)³	2024 (Regulatory)⁴
Common Equity Tier 1 (CET1) ratio (transitional)	20.96%	19.16%
CET1 (fully loaded)	20.61%	19.14%
Total Capital ratio (transitional)	25.90%	24.02%
Risk weighted assets (RWAs) (€ million)	10,424	10,834
RWAs intensity	36.46%	40.91%

- 1 References to pro forma figures as at 31 December 2024 refer to the agreement for the sale of two non-performing loan portfolios, which was completed in the first half of 2025. The portfolio is classified as non-current assets held for sale with a net book value of €23 million as at 31 December 2024. Numbers on a pro forma basis are based on 31 December 2024 underlying basis figures and assumed completion of the sale.
- 2 As of 30 September 2025, the definition of both gross loans and allowance for expected loan credit losses was updated with respect to the residual fair value adjustment on initial recognition now being deducted from gross loans instead of being included in the allowance for expected loan credit losses. This revision was implemented to align the underlying basis with the statutory basis for gross loans and advances to customers measured at amortised cost and is not material. There is no impact on the net loans as a result of this update in the definitions. Comparative information has been revised to reflect this adjustment to conform with the current period's disclosure format, unless otherwise stated.
- 3 Includes profits for the year ended 31 December 2025 net of the proposed final cash dividend resolved by the Board of Directors in respect of 2025 earnings. More information is provided in Section 5.1 EU CC1 - Composition of regulatory own funds.
- 4 Includes profits for the year ended 31 December 2024 net of distribution resolved by the Board of Directors in respect of 2024 earnings. More information is provided in Section 5.1 EUCC1 – Composition of regulatory own funds.

Throughout this Report, all relevant figures are based on 31 December 2025 financial results, unless otherwise stated. Numbers on a pro forma basis are based on the 31 December 2024 and are adjusted for the portfolios classified as non-current assets held for sale and assumed completion of the sale. Where numbers are provided on a pro forma basis this is explicitly stated as pro forma.

- Credit Risk is managed in accordance with the Risk Appetite which sets targets for several key **asset quality metrics** described below.
 - Non-Performing Exposures (NPEs) were reduced to €127 million at 31 December 2025, compared to €202 million at 31 December 2024. As a result, the NPEs reduced to 1.2% of gross loans as at 31 December 2025, compared to 2.0% of gross loans as at 31 December 2024.
 - Group's priorities focus on maintaining high quality new lending with strict underwriting standards and preventing asset quality deterioration. Loan credit losses for the year ended 31 December 2025 amounted to €35 million, corresponding to a cost of risk of 33 basis points compared to €30 million for the year ended 31 December 2024 and a cost of risk of 30 basis points. The year-on-year increase was mainly due to the recognition of more conservative macroeconomic assumptions on the adverse scenario to account for heightened global economic uncertainty, applied since the first quarter of 2025, and the introduction of an ESG overlay in the last quarter of 2025. Overall, the cost of risk reflects continued robust performance of the credit portfolio.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

1. Executive Summary (continued)

- The NPE coverage ratio stands at 139% at 31 December 2025, compared to 82% at 31 December 2024.
- The Group has in place limits to manage concentration risk which can arise, among others, from sector, product, counterparty, currency, collateral and funding source concentration. Appropriate monitoring and reporting processes are in place and are frequently reviewed. There are restrictions on loan concentrations which are imposed by the Cyprus Banking Law, the relevant Central Bank of Cyprus (CBC) Directives, European Central Bank (ECB) Directives and the Capital Requirements Regulation (CRR). According to these restrictions, a credit institution shall not incur an exposure after taking into account the effect of the credit risk mitigation and exempt exposures to a client or group of connected clients, the value of which exceeds 25% of Tier 1 Capital. The Group's Risk Appetite Statement (RAS) imposes stricter concentration limits and the Group is taking actions to run down those exposures which are in excess of the internal limits over time.
- As at 31 December 2025, the **Liquidity Coverage ratio (LCR)** stood at 321% compared to 309% at 31 December 2024 and was in compliance with the minimum regulatory requirement of 100%.
- As at 31 December 2025, the **Net Stable Funding ratio (NSFR)** stood at 171% compared to 162% at 31 December 2024 and was in compliance with the minimum regulatory requirement of 100%.
- The **Common Equity Tier 1 (CET1) ratio on a transitional basis** stood at 20.96% as at 31 December 2025, compared to 19.16% as at 31 December 2024. During the year ended 31 December 2025, CET1 ratio was mainly affected by pre-provision income, provisions and impairments, the payment of Additional Tier 1 (AT1) coupon, other movements and the decrease in risk-weighted assets primarily as a result of the implementation of CRR III. The implementation of CRR III had a positive impact of approximately 1% on the CET1 ratio (transitional) of the Group on initial application on 1 January 2025. The CET1 ratio is also impacted by the deductions for distribution in respect of 2025 earnings and charges in line with the applicable framework.
- The **CET1 fully loaded ratio** amounted to 20.61% as at 31 December 2025, compared to 19.14% as at 31 December 2024.
- The **Total Capital ratio** stood at 25.90% as at 31 December 2025, compared to 24.02% as at 31 December 2024.
- The Total RWA in 2025 (€10,424 million) decreased in comparison to 2024 (€10,834 million) with the main drivers being the decrease in operational risk RWAs and to a lesser extent in credit risk RWAs following implementation of CRR III, as well as the overall decrease in "Other assets" related exposures (such as stock of properties) partly offset by an increase in customer advances and investments.
- The Standardised Approach has been applied to calculate the Risk Weighted Assets (RWAs) for credit Risk. Credit Risk RWAs continue to be the main component of minimum capital requirements.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

1. Executive Summary (continued)

Risk Profile

The Group is exposed to several key risks that include credit risk, market risk, liquidity and funding risk, concentration risk, business model and strategic risk, geopolitical risk, property price risk, climate related and environmental risk, insurance and reinsurance risk, model risk, and operational risk which includes but not limited to, regulatory compliance risk, legal risk, information security and cyber risk, technology risk, digital transformation risk and third-party risk. Further details on these risks are provided in Section 3 of the current disclosures.

The Board, through the Risk Committee, is responsible to ensure that a coherent and comprehensive Risk Management Framework for the identification, assessment, monitoring and controlling of all risks is in place. The framework, described in detail in Section 3 of the current disclosures, provides the infrastructure, processes and analytics needed to support effective risk management. It also ensures that material risks are identified, including, but not limited to, risks that might threaten the Group's business model, future performance, liquidity, and solvency. Such risks are taken into consideration in defining the Group's overall business strategy ensuring alignment with its risk appetite. In setting its risk appetite, the Group ensures that its risk bearing capacity is considered so that the appropriate capital levels are always maintained. Furthermore, the risk appetite framework sets specific limits on credit risk including the level of NPEs, the cost of risk as well as concentration limits which are considered when defining the level of new lending in the business strategy.

To ensure that the risk profile of the Group is within the approved risk appetite a consolidated risk report and a risk appetite dashboard is regularly reviewed and discussed by the Board and the Risk Committee. Where a breach occurs, the Risk Appetite Framework provides the necessary escalation process to analyse the materiality and nature of the breach, notify the appropriate authorities, and decide the necessary remediation actions.

This Executive Summary section aims to provide a concise risk statement of the Group's overall risk profile in the context of the Group's business strategy which is accepted and approved by the Board as part of the overall Pillar 3 Report.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

2. Introduction

2.1 Corporate Information

The Company was incorporated in Ireland on 11 July 2016, as a public limited company under company number 585903 (LEI code: 635400L14KNHZXPUZM19) in accordance with the provisions of the Companies Act 2014 of Ireland (Companies Act 2014). Its registered office is 10 Earlsfort Terrace, Dublin 2, D02 T380, Ireland.

The Company is the holding company of BOC PCL with principal place of business in Cyprus. The Bank of Cyprus Holdings Group (the 'Group') comprises the Company, its subsidiary, BOC PCL, and the subsidiaries of BOC PCL. Bank of Cyprus Holdings Public Limited Company is the ultimate parent company of the Group.

The principal activities of BOC PCL and its subsidiary companies (the 'BOC Group') involve the provision of banking services, financial services, insurance services and the management and disposal of property predominately acquired in exchange of debt.

BOC PCL is a significant credit institution for the purposes of the SSM Regulation and has been designated by the CBC as an 'Other Systemically Important Institution' (O-SII). The Group is subject to joint supervision by the ECB and the CBC for the purposes of its prudential requirements.

2.2 Pillar III Regulatory Framework

Regulatory framework overview

The Pillar 3 report is prepared in accordance with Regulation (EU) No 575/2013 of the European Parliament and of the Council of 26 June 2013 on prudential requirements for credit institutions (Capital Requirements Regulation – CRR) and Directive 2013/36/EU of the European Parliament and of the Council of 26 June 2013 on access to the activity of credit institutions and the prudential supervision of credit institutions (Capital Requirements Directive - CRD) and their subsequent amendments under CRR III and CRD VI. The European Banking Authority (EBA) guidelines on Pillar 3 disclosure requirements are fully adopted.

The CRR and CRD establish the prudential requirements for capital, liquidity and leverage that entities need to abide by. CRD governs access to deposit-taking activities, internal governance arrangements including remuneration, board composition and transparency. CRR introduced significant changes in the prudential regulatory regime applicable to banks including amended minimum capital adequacy ratios, changes to the definition of capital and the calculation of RWAs and the introduction of new measures relating to leverage, liquidity and funding. CRR permits a transitional period for certain of the enhanced capital requirements and certain other measures, such as the leverage ratio, which was largely effective by 2019. In addition, the Regulation (EU) 2016/445 of the ECB on the exercise of options and discretions available in Union law (ECB/2016/4) provides certain transitional arrangements which supersede the national discretions unless they are stricter than the EU Regulation 2016/445.

As of 27 July 2019, the CRR was updated by the CRR Amendment Regulation (EU) 2019/876. Regulation (EU) 2019/876 which is applicable from June 2021, includes the introduction of a minimum leverage ratio of 3%, the new standardised EAD calculation for counterparty risk, known as SA-CCR, a minimum Net Stable Funding Ratio (NSFR) of 100%, the new limits for large exposures and the requirement to report under the standardised approach for market risk. The NSFR is calculated as the amount of "available stable funding" (ASF) relative to the amount of "required stable funding" (RSF).

During 2024, the EU co-legislators finalised, adopted and published the comprehensive package of reforms with respect to European Union banking rules which implement the Final Basel III set of global reforms, changing how banks calculate their RWAs (Regulation (EU) 2024/1623 (known as CRR III)) and Directive (EU) 2024/1619 (known as CRD VI), applicable from January 1, 2025, with Regulation (EU) 2024/1623 amending the CRR as regards requirements for credit risk, credit valuation adjustment risk, operational risk, market risk and the output floor and Directive (EU) 2024/1619 amending Directive 2013/36/EU as regards supervisory powers, sanctions, third-country branches, and environmental, social and governance risks.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

2.2 Pillar III Regulatory Framework (continued)

Most provisions of the CRR III have become effective on 1 January 2025, with certain measures subject to transitional arrangements or to be phased-in over time. The date of the application of the Fundamental Review of the Trading Book ('FRTB') framework has been postponed to 1 January 2026, in accordance with Commission delegated regulation 2024/2795. On 12 June 2025, the European Commission confirmed that the start date for the new market risk rules under the FRTB will be postponed by one additional year to 1 January 2027.

As Regulation (EU) 2024/1623 is an amendment to Regulation (EU) 575/2013, the term CRR is used consistently throughout this document. Unless further specified, the term CRR always means the currently applicable version.

The current regulatory framework comprises three pillars:

- Pillar I which covers the calculation of RWA for credit risk, counterparty risk, market risk and operational risk.
- Pillar II which covers the Supervisory Review and Evaluation Process (SREP), which assesses the internal capital adequacy processes and whether additional capital is required over and above the Pillar I and provides for the monitoring and self-assessment of a bank's capital adequacy and internal processes.
- Pillar III which covers external disclosures that are designed to provide transparent information on regulatory capital adequacy, risk exposures and risk management and internal control processes.

The Group's 2025 year end disclosures comply with all relevant CRD, CRR and associated EBA and ECB guidelines and technical standards in force at 31 December 2025.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

2.2 Pillar III Regulatory Framework (continued)

Capital requirements

The minimum ratios presented below apply for the Group, BOC PCL and the BOC Group. In addition, the ECB has also provided non-public guidance for an additional Pillar II CET1 buffer.

Minimum Capital Requirements

	01 January 2026	2025	2024
		%	%
Pillar 1			
CET1	4.50	4.50	4.50
Tier 1	6.00	6.00	6.00
Total Capital requirement - Pillar 1	8.00	8.00	8.00
Pillar 2			
CET1	1.41	1.55	1.55
AT1	0.47	0.52	0.52
Tier 2	0.63	0.69	0.69
Total Capital requirement - Pillar 2 - Note 1	2.50	2.75	2.75
Buffers			
Capital Conservation Buffer (CCB) - Note 2	2.50	2.50	2.50
Countercyclical Capital Buffer (CcyB) - Note 3	0.90	0.90	0.92
Other Systematically Important Institutions (O-SII) - Note 4	2.25	1.94	1.88
Total minimum requirements CET1 - Note 5	11.55	11.38	11.34
Overall Capital requirement - Note 5	16.15	16.08	16.05

Notes:

1. In the context of the annual SREP conducted by the ECB in 2025 and based on the final SREP decision received in October 2025 effective from 1 January 2026, the Pillar II Requirement (P2R) was revised to 2.50%, compared to the previous level of 2.75%.
2. The Capital Conservation Buffer (CCB) was gradually phased in at 0.625% in 2016, 1.25% in 2017, and 1.875% in 2018 and was fully implemented on 1 January 2019 at 2.50%.
3. The CBC, in accordance with the Macroprudential Oversight of Institutions Law of 2015, sets, on a quarterly basis, the Countercyclical Capital Buffer (CcyB) rates in accordance with the methodology described in this law. The CcyB is effective as of 1 January 2016 and is determined for all the countries in the European Economic Area by their local competent authorities ahead of the beginning of each quarter. On 2 June 2023, the CBC, announced its decision to raise the CcyB rate from 0.50% to 1.00% of the total risk exposure amount in Cyprus, effective from 2 June 2024. The CcyB for the Group as at 31 December 2025 has been calculated at approximately 0.90% (31 December 2024: 0.92%). The CCyB for Cyprus exposures is 1% at 31 December 2025 (equating to an estimated 0.81% Group requirement). The CCyB for Greek exposures was at 0.25% (equating to an estimated 0.02% Group requirement). Other jurisdictional exposures equate to a c.0.07% Group requirement. In January 2025, the CBC, based on its macroprudential policy, increased the CcyB rate from 1.00% to 1.50% of the total risk exposure amount in Cyprus effective from January 2026. Based on the above, the CcyB for the Group will increase further.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

2.2 Pillar III Regulatory Framework (continued)

4. In accordance with the provisions of this law, the CBC is also the responsible authority for the designation of banks that are O-SIIs and for the setting of the O-SII buffer requirement for these systemically important banks. BOC PCL has been designated as an O-SII. The O-SII Buffer increased by 37.5 bps to 1.875% on 1 January 2024, following a revision of the O-SII buffer by the CBC in October 2023. In April 2024, following a revision by the CBC, the Group's O-SII buffer has been set to 2.00% from 1 January 2026 phased-in by 6.25 bps to 1.9375% on 1 January 2025. In November 2025, following the annual assessment by CBC, the O-SII buffer increased to 2.25%, effective from 1 January 2026.
5. In the context of the annual SREP conducted by the ECB in 2024 and based on the final SREP decision received in December 2024, effective from 1 January 2025, the Group's minimum phased in CET1 capital ratio and Total Capital ratio requirements remained unchanged from prior year, when disregarding the phasing in of the O-SII buffer. On 31 December 2025, the Group's minimum phased in CET1 capital ratio was set at 11.38%, comprising a 4.50% Pillar I requirement, a 1.55% P2R, the CCB of 2.50%, the O-SII Buffer of 1.9375% and CcyB of approximately 0.90%. Likewise, on 31 December 2025, the Group's minimum phased in Total Capital ratio requirement was set at 16.08%, comprising an 8.00% Pillar I requirement, of which up to 1.50% can be in the form of AT1 capital and up to 2.00% in the form of T2 capital, a 2.75% P2R, the CCB of 2.50%, the O-SII Buffer of 1.9375% and the CcyB of approximately 0.90%. The non-public guidance for an additional Pillar II CET1 buffer (P2G) remained unchanged in 2025 compared to 2024.

Following the annual SREP performed by the ECB in 2025 and based on the final 2025 SREP Decision received in October 2025, the Group's minimum phased-in CET1 capital ratio and Total Capital ratio requirements decreased effective from 1 January 2026, when disregarding the aforementioned increase of the CcyB and the O-SII buffer, reflecting the reduction in the Pillar II requirement by 25 bps to 2.50% on 1 January 2026. On 1 January 2026 the Group's minimum phased in CET1 capital ratio requirement is set at approximately 11.55%, comprising a 4.50% Pillar I requirement, a 1.41% P2R, the CCB of 2.50%, the O-SII Buffer of 2.25% and CcyB of approximately 0.90%. On 1 January 2026, the Group's minimum phased in Total Capital ratio requirement is set at approximately 16.15%, comprising an 8.00% Pillar I requirement, of which up to 1.50% can be in the form of AT1 capital and up to 2.00% in the form of T2 capital, a 2.50% P2R, the CCB of 2.50%, the O-SII Buffer of 2.25% and the CcyB of approximately 0.90%.

As aforementioned, the CcyB of the Group will increase further following the increase by the CBC of the total risk exposure amount in Cyprus from 1.00% to 1.50%, effective from mid-January 2026. The non-public guidance for an additional Pillar II CET1 buffer (P2G) has also been revised downwards compared to 2025, based on the final SREP Decision.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

2.2 Pillar III Regulatory Framework (continued)

The EBA final guidelines on SREP and supervisory stress testing and the SSM 2018 SREP methodology provide that own funds held for the purposes of P2G cannot be used to meet any other capital requirements (Pillar I requirement, P2R or the combined buffer requirement) and therefore cannot be used twice.

The capital position of the BOC PCL and the Group at 31 December 2025 exceeds both their Pillar I and their Pillar II add-on capital requirements. However, the Pillar II add-on capital requirements are a point-in-time assessment and therefore are subject to change over time.

The subsidiaries of the Group which are not included in the prudential consolidation and have capital requirements to comply with, are the following insurance subsidiaries:

- General Insurance of Cyprus Ltd (Genikes Insurance) and
- EuroLife Ltd (EuroLife)

The insurance subsidiaries of the Group complied with the requirements of the Superintendent of Insurance including the minimum solvency ratio throughout 2025. Therefore, there is no capital shortfall to report with respect to the insurance subsidiaries of the Group in accordance with CRR Article 436(g). The Solvency and Financial Condition Report of the General Insurance of Cyprus Ltd and EuroLife Ltd is made public on a yearly basis beginning of April and is published on their websites, www.genikesinsurance.com.cy and www.eurolife.com.cy (Solvency and Financial Condition Reports).

The regulated Cyprus Investment Firm (CIF) of the Group, The Cyprus Investment and Securities Corporation Ltd (CISCO), complied with the minimum capital adequacy ratio requirements throughout 2025. In December 2019, the European Parliament approved the new prudential regime for Investment Firms ("IFs") in the Investment Firm Regulation (EU) 2019/2033 ("IFR") on the prudential requirements of IFs and the Investment Firm Directive (EU) 2019/2034 ("IFD") on the prudential supervision of IFs. IFR on the prudential requirements of IFs became directly applicable in all EU Member States on 26th June 2021 whereas IFD on the prudential supervision of IFs was transposed into national legislation by the Cyprus Securities and Exchange Commission (CySEC) by issuing Law L.97(I)/2021 on the capital adequacy of IFs applicable as from 26th June 2021, Amending Law L.164(I)/2021 on the capital adequacy of IFs applicable as from the 5th November 2021 and Law L.165(I)/2021 on the prudential supervision of IFs applicable as from 5th November 2021. The new prudential framework introduced a new classification for IFs, the Systemic and Non-Systemic. Systemic firms are larger firms with assets over €30 billion, that carry out risky activities (e.g. bank activities) and will remain under CRR/CRD and subject to banking supervision ("Class 1A" and "Class 1B"). Non-Systemic, are firms of either "Class 2" or "Class 3", based on certain criteria, which are subject to the new IFR/IFD Regime in full or with certain exceptions. The new classification of the IFs determines their new capital requirements and reporting obligations. CISCO has been classified as a Non-Systemic "Class 2" company. CISCO complies with the capital requirements under the IFD/IFR as at 31 December 2025.

The payment services subsidiary of the Group, JCC Payment Systems Ltd, currently licensed as an Electronic Money Institution, complies with regulatory capital requirements under the Electronic Money Laws of 2012 (N. 81(I)/2012) as amended.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

2.2 Pillar III Regulatory Framework (continued)

Disclosure policy

The Group maintains a Pillar 3 Disclosure Policy to support compliance with Articles 431-455 of the CRR and associated EBA guidelines and technical standards. The following sets out the key elements of the disclosure policy including the basis of preparation, frequency, media and location verification. Regarding the risk profile disclosure and their overall appropriateness please refer to Section 3.

Basis and preparation

The 2025 Pillar 3 Disclosures report (the 'Report') of the Group sets out both quantitative and qualitative information required in accordance with Part 8 'Disclosures by Institutions' of the CRR. Articles 431 to 455 of the CRR specify the Pillar 3 framework requirements (refer to Appendix V Specific References to CRR Articles at the end of the Report). Commission Implementing Regulation (EU) 2024/3172 of 29 November 2024, which repeals and replaces Regulation (EU) 2021/637 and incorporates prior amendments introduced by Regulations 2021/1018, 2022/631, and 2022/2453, specifies the tables integrated in this Report (refer to Appendix VI List of EBA templates at the end of the Report), which are now in force for the purposes of this Report. A CRR mapping table has been included in Appendix V which details how the Group has complied with each article under Part Eight.

A number of significant differences exist between accounting disclosures published in accordance with IFRS and Pillar 3 disclosures published in accordance with prudential requirements, which prevent direct comparison in a number of areas. There are differences in the scope of consolidation (Section 4) and the definition of credit risk exposure.

The Report is presented in Euro (€), which is the functional and presentation currency of the Company and its operating subsidiaries in Cyprus and all amounts are rounded to the nearest million, except where otherwise indicated. A comma is used to separate million and a dot is used to separate decimals. Due to rounding created from specific Pillar III regulation, numbers presented throughout this document may not add up precisely to the totals we provide, and percentages may not precisely reflect the absolute figures.

Frequency, media and location

Annual Pillar III Disclosures Report

Following the implementation of CRR III from 2025 onwards, the CRR (Articles 434 and 434a) mandates the EBA to publish on its website the prudential disclosures for all institutions subject to such requirements, making it readily available in a centralised manner to all the relevant stakeholders through a single electronic access point on its website, the so-called 'Pillar 3 Data Hub'.

The Group, effective for the 2025 Annual Report, will submit its Annual Report (quantitative data in XBRL-csv format and qualitative disclosures (including narratives and attestation) in PDF format) directly to the EBA via the EUCLID 3 Regulatory Reporting Platform (ERRP). The EBA will re-publish the submitted information on its own platform without any transformation, ensuring consistency, transparency, and accessibility across the financial sector.

According to Article 434(1) of the CRR, the Group is required to submit to EBA the information constituting the Report in electronic format, no later than the date on which it publishes its financial statements, or as soon as possible thereafter. To comply with the requirement, it is defined in the Pillar 3 Disclosure Policy that the Group's Pillar 3 disclosures are to be published the latest within one month from the publication of the financial statements.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

2.2 Pillar III Regulatory Framework (continued)

In addition, the Group will continue to publish its Annual Report on its website (<http://www.bankofcyprus.com> (Investor Relations) in PDF format, within the same timeframe i.e. within one month from the publication of the annual financial statements, however the annual publication will follow submission to the EBA, as prescribed by the relevant ITS. The information submitted through the 'Pillar 3 Data Hub', becomes the primary source of Pillar 3.

In the first year of application i.e. financial year 2025, transitional provisions apply allowing publication of the Annual Report ahead of submission in electronic format.

Quarterly and Semi-Annual Disclosures

The Group also prepares semi-annually and quarterly disclosures (for Q1 and Q3) based on the Requirements of Art. 433a (1) CRR (the quarterly Pillar III disclosures. Similarly, to the Annual Report, effective for semi-annual 2025 disclosures onwards the Group's Pillar III semi-annual and quarterly disclosures are to be submitted to the EBA in electronic format (in the same manner and form as described above for the Annual Pillar 3 Disclosures) within one month from the announcement of the Group's Financial results.

The Group will also publish on its website (<http://www.bankofcyprus.com> (Investor Relations) its semi-annually and quarterly Pillar III disclosures, following submission to the EBA. Semi-annually and quarterly Pillar 3 disclosures published on the Group website will be consistent with the information submitted to the EBA.

Verification

This Report is published by the Group as per the formal disclosure policy approved by the Board.

Group Compliance Division had an oversight of the framework and assurance procedures, and Group Internal Audit performed a review of the process followed by the Group for the preparation of Pillar 3 Disclosures for 2025.

The Pillar 3 report pre its submission to the Board is reviewed and approved by the Executive Committee (EXCO). The Board, through the Risk and Audit Committees, scrutinizes and approves the Pillar 3 report. This governance process ensures that both management and the Board are given sufficient opportunity to challenge the disclosures.

The Report was approved by the Board through the Audit and Risk Committees.

Attestation

'We, the Chief Risk Officer and the Executive Director Finance, confirm that, to the best of our knowledge, Bank of Cyprus Holdings Public Limited Group's 2025 Pillar 3 disclosures comply with Part Eight of the CRR and the EBA ITS related disclosure requirements have been prepared in accordance with the internal control processes agreed upon at the Board level, as well as that we provide assurance that the Risk Management Framework and the system of internal controls put in place are adequate taking into account the institution's risk profile and its strategy.'

Demetris Th. Demetriou

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

3. Risk Management Objectives and Policies

3.1 Strategies and Processes to Manage Risks

3.1.1 Principal Risks and other risks and uncertainties

As part of its business activities, the Group faces a variety of risks. The most significant risks in relation to the Group's financial position, capital adequacy and ability to operate are described in detail in Section 3.2. A high-level summary of all principal risks, together with other risks and uncertainties facing the Group and the associated mitigating considerations is set out.

The summary should not be regarded as a complete and comprehensive statement of all potential risks, uncertainties or mitigants. Other factors, either not yet identified or not currently material, may adversely affect the Group. The risks describe below include emerging risks, which are defined as new risks or existing risks that may escalate or evolve in a different way, with the potential to threaten the execution of the Group's strategy or operations over the medium term.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

3.1.1 Principal Risks and other risks and uncertainties (continued)

Principal Risks	
<i>Risk</i>	<i>Mitigating considerations</i>
Business Model and Strategic Risk	
<ul style="list-style-type: none"> - Business and strategic risk arises from changes in the external environment including economic trends, competition, geopolitics and regulatory changes, or due to operational factors, such as inadequate planning or implementation. - The Group faces competition from banks, financial institutions, insurance and financial technology companies operating locally or abroad. - A possible deterioration of the macroeconomic environment could lead to poor financial performance impacting the Group's profitability, asset quality or capital resources. - The Group's business environment and operational performance are heavily dependent on the current and future economic conditions and prospects in Cyprus, where the Group's operations and earnings are predominantly based and generated. - The Group is also dependent on the economic conditions and prospects in the countries of the main counterparties it conducts business with. 	<p>The Group has a clear strategy with key objectives to enable delivery and operates within defined risk appetite limits which are calibrated to be within the Group's Risk bearing capacity. The strategy is monitored closely on a regular basis.</p> <ul style="list-style-type: none"> - The Group remains ready to explore opportunities that complement its strategy, including the diversification of income. - As the Group's business model is pivotal to strategic risk, it has to be viable and sustainable and produce results that are consistent with its annual targets. - The Group monitors and manages business model risk within its Risk Appetite Framework, by setting limits in respect of measures such as financial performance, portfolio performance and concentration and capital levels. At a more operational level, the risk is mitigated by monitoring deviations from the Group Financial Plan, while during the year, periodic reforecast updates of the financial plan are prepared. The frequency of reforecast updates during each year is determined by the prevailing business and economic conditions. Performance against the plan is monitored on a monthly basis, both at Group and Business Line levels, and is reported to the EXCO and the Board. - The Group closely monitors the risks and impact of changing macroeconomic conditions on its lending portfolio, strategy and objectives, considering mitigating actions, where necessary. - An internal stress testing framework as part of the Group's Internal Capital Adequacy Assessment Process (ICAAP) is in place to provide insights and to assess capital resilience to shocks.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.1 Principal Risks and other risks and uncertainties (continued)

Geopolitical Risk	
<ul style="list-style-type: none"> - The Group, operating in a small, open, services-based economy with a large external sector and high reliance on tourism and international business services, is susceptible to adverse changes in domestic economic conditions caused by external factors such as economic and geopolitical events that are beyond its control. - A number of macro and market related risks, including weaker economic activity, a volatile interest rate environment for longer, changes in the US trade policy, high public debt levels in some European countries, and higher competition in the financial services industry, could negatively affect the Group's business environment, results, and operations. 	<ul style="list-style-type: none"> - The Group continuously monitors current affairs, the impact of the forecasted macroeconomic conditions and geopolitical developments on the Group's strategy to proactively manage emerging risks. Where necessary, bespoke solutions are offered to the affected exposures and close monitoring on those is maintained. - The Group includes related events in its stress testing scenarios to gain a better understanding of the potential impact.
Credit risk	
<ul style="list-style-type: none"> - Credit risk is defined as the current or prospective risk to earnings and capital arising from an obligor's failure to meet the terms of any contract with the Group (actual, contingent or potential claims both on and off-balance sheet) or failure to perform as agreed. - Within the general definition of credit risk, the Group identifies and manages the following types of risk; counterparty credit risk, settlement risk, issuer risk, concentration risk, country risk, environmental, social, governance risk (ESG). 	<ul style="list-style-type: none"> - The Group sets and monitors risk appetite limits relating to credit risk. - A limits framework is in place in relation to the credit granting process and also the general rules are documented in the Group's Lending Policy. Relevant circulars and guidelines are in place that provide parameters for the approval of credit applications and related credit limits. - The Group applies early warning systems, measures expected credit losses, and reports exposures and breaches to senior management. - The Group evaluates credit applications objectively and monitors portfolio quality using KRIs and proactive reporting.
Market risk	
<ul style="list-style-type: none"> - The current or prospective risk to earnings and capital from adverse movements in interest rates, currency/ foreign exchange rates, and from any other changes in market prices. The main types of market risk to which the Group is exposed are Interest Rate Risk in the Banking Book, Currency/ foreign exchange rates risk, Securities price risk, and properties price risk. (refer to property price risk below). 	<ul style="list-style-type: none"> - A proper policy and limit framework is in place for all market risk areas ensuring the Bank operates within its risk appetite. - Market risk is measured using portfolio sensitivity analysis, Value at Risk (VaR), scenario analysis and stress testing measures.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.1 Principal Risks and other risks and uncertainties (continued)

Property Price risk	
<ul style="list-style-type: none">- A significant proportion of the Group's loan portfolio is secured primarily by mortgages over Cypriot real estate. Furthermore, the Group retains a portfolio of real estate in Cyprus, mainly as a result of the enforcement of loan collateral and debt-for-asset swaps.- Property price risk is the risk that the value of property will decrease either as a result of:<ul style="list-style-type: none">o Changes in the demand for, and prices of, real estate; oro Regulatory requests which may increase the capital requirements for stock of property.- The Group is exposed to the risk of negative changes in the fair value of property, which is held either for own use, as stock of property or as investment property. Stock of property has been predominately acquired in exchange of debt with the intention to be disposed of in line with the Group's strategy.	<ul style="list-style-type: none">- The Group has an established Real Estate Management Unit (REMU), a specialised division to manage, promote and monetise the repossessed portfolio, including other non-core assets, through appropriate real estate disposal initiatives.- The Group has placed great emphasis on the efficient and quick disposal of on-boarded properties and on their close monitoring and regular reporting. RAS indicators and other Key Performance Indicators (KPIs) are in place monitoring REMU properties in terms of value, ageing and sales levels.- The Group assesses and quantifies property risk as one of the material risks for ICAAP purposes under both the normative and economic perspective.- The Group monitors the changes in the market value of the collateral and, where necessary, requests the pledging of additional collateral in accordance with the relevant agreement.- As part of the valuation process, assumptions are made about the future changes in property values, as well as the timing for the realisation of collateral, taxes and expenses on the repossession and subsequent sale of the collateral as well as any other applicable haircuts.- For the valuation of properties owned by the Group, judgement is exercised which takes into account all available reference points, such as comparable market data, expert valuation reports, current market conditions and application of appropriate illiquidity haircuts where relevant.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.1 Principal Risks and other risks and uncertainties (continued)

Funding & Liquidity Risk	
<ul style="list-style-type: none">- Funding risk refers to the risk that the Group does not have sufficiently stable sources of funding or access to sources of funding may not always be available at a reasonable cost and thus the Group may fail to meet its obligations, including regulatory ones (e.g. MREL).- Liquidity risk refers to the risk that the Group is unable to fully or promptly meet current and future payment obligations as and when they fall due. This risk includes the possibility that the Group may have to raise funding at high cost or sell assets at a discount to fully and promptly satisfy its obligations.	<ul style="list-style-type: none">- Surpluses in all regulatory (e.g. LCR, NSFR) and internal liquidity indicators.- Close monitoring of customer deposits.- Weekly internal stress testing.- An updated and tested Liquidity Contingency Plan and an internal stress testing framework are in place.- The Bank is in compliance with its MREL requirement head of the compliance date (i.e. 31 December 2024) and with significant surplus.
Concentration Risk	
<ul style="list-style-type: none">- Concentration risk is the risk of loss due to exposures to any single entity or group of related entities with the potential to produce losses large enough (relative to capital, total assets, or overall risk level), to threaten the Group's health, reputation, or ability to maintain its core operations.- Concentration risk arises also through the Bank's exposure to the Cyprus sovereign bonds.- Other sources of concentration risk arise from exposures to a specific sector (i.e. construction), property exposures held as collateral or have been repossessed (property risk) or undue concentration in a specific geographical area.	<ul style="list-style-type: none">- The Group's risk appetite statement imposes strict concentration limits, and the Group is taking actions to run down problematic exposures which are in excess of these internal limits over time. Internal limits are stricter than the ones provided by the Banking Law.- Concentration Risk Policy and related guidelines aligned with the Risk Appetite Statement are in place.- Exposures are monitored and reported on a monthly basis.- Thresholds are set for potential losses from changes in market prices

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.1 Principal Risks and other risks and uncertainties (continued)

Operational Risk	
<ul style="list-style-type: none"> - The risk of direct or indirect impact/loss resulting from inadequate or failed internal processes, people, systems, or from external events. This definition includes External Fraud risk, Internal Fraud Risk, Financial Crime risk, Physical Security and Safety risk, Transaction Processing and Execution risk, Compliance risk, Business Continuity risk, Data accuracy risk, as well as Reputational risk. It also includes Information Security and Cyber risk, Legal risk, Regulatory risk, Technology risk and Third-Party risk. - Operational risks can arise from all business lines and from all activities carried out by the Group and are thus diverse in nature. 	<ul style="list-style-type: none"> - The RAS sets limits on aggregate operational losses as well as across sub-categories of operational risk including, among others, fraud, conduct, legal, compliance and reputational risk. - In addition, several processes, control and procedures are in place, such as: <ul style="list-style-type: none"> • An established Risk and Control Self-Assessment (RCSA) process. • A defined Operational Risk Appetite. • Incident recording and analysis • Established Key Risk Indicators. • Operational Risk Capital Requirements and ICAAP • Training and awareness • Disaster Recovery.
Information Security & Cyber Risk	
<ul style="list-style-type: none"> - Information security and cyber-risk is a significant inherent risk, which could cause a material disruption to the operations of the Group. - The Group's information systems have been and will continue to be exposed to an increasing threat of continually evolving cybercrime and data security attacks. - Customers and other third parties to which the Group is significantly exposed, including the Group's service providers (such as data processing companies to which the Group has outsourced certain services), face similar threats. - Current geopolitical tensions have also led to increased risk of cyber-attack from foreign state actors. 	<ul style="list-style-type: none"> - The Group has an internal specialised Information Security team which constantly monitors current and future cyber security threats (either internal or external, malicious or accidental) and invests in enhanced cyber security measures and controls to protect, prevent and appropriately respond against such threats to its systems and information. - The Group maintains a comprehensive Information Security and ICT Risk Management Strategy that includes improvements and investments in technology, skills and processes in an effort to further minimize system downtimes and cyber security threats, as well as strengthen the overall digital resilience of the Group. - The Group collaborates with industry bodies, the National Computer Security Incident Response Team (CSIRT) and intelligence-sharing working groups to be better equipped with the growing threat from cyber criminals. - The Group maintains insurance coverage which covers certain aspects of cyber risks.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.1 Principal Risks and other risks and uncertainties (continued)

Digital Transformation Risk	
<ul style="list-style-type: none">- Digital transformation risk arises as banking models are rapidly evolving both locally and globally as available technologies have resulted in the customers' accelerated shift towards digital channels. Money transmission, data driven integrated services and Digital Product Sales are also rapidly evolving.- How the Group adapts to these developments could impact the realisation of its market strategies and financial plans.	<ul style="list-style-type: none">- The Group assesses and develops its Digital Strategy and maintains a clear roadmap that provides for migration of transactions to the Digital Channels, fully Digital and Digital Assisted Product Sales, embedded banking and self-service banking support services.- The Group's emphasis on the Digital Strategy is reflected in the Operating Model with a designated Chief Digital Officer supported by staff with the appropriate skills that work closely with Technology and Control functions to execute the strategy.- The Group's policies, standards, governance and controls undergo ongoing review to ensure continued alignment with the Group's strategy for digital transformation and effective management of the associated risk.
Legal Risk	
<ul style="list-style-type: none">- The Group may, from time to time, become involved in legal or arbitration proceedings which may affect its operations and results.- Litigation risk arises from pending or potential legal proceedings and regulatory investigations against the Group. In the event that legal issues are not properly dealt with by the Group, this may result in financial and/or reputational loss to the Group.	<ul style="list-style-type: none">- The Group has procedures in place to ensure effective and prompt management of Legal risk including, among others, regulatory developments, new products and internal policies.- The Legal Services Department (LSD) monitors pending litigation against the Group and assesses the probability of loss for each legal action against the Group. It also estimates the amount of the potential loss where it is deemed as probable.- The Legal Services Department reports pending litigation and latest developments to the Board of Directors.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.1 Principal Risks and other risks and uncertainties (continued)

Regulatory Compliance Risk	
<ul style="list-style-type: none">- The Group conducts its businesses subject to on-going regulations and associated regulatory risks, including the impact of the implementation of and amendments in laws, regulations, policies, codes of conduct, etc.- Regulatory compliance risk is the risk of impairment to the Group's operations, reputation and financial condition from failure to meet laws and regulations, internal standards and policies, and expectations of key stakeholders such as shareholders, regulators, customers, employees and society.- Failure to comply with regulatory requirements or identify and prepare for emerging requirements could lead to, amongst others, increased costs for the Group, regulatory fines, limitation on the Bank's capacity to perform banking activities and could have a material adverse effect on the business, financial condition and results, operations and prospects of the Group.	<ul style="list-style-type: none">- The Group's management maintains continuous and transparent communication with its Regulators (including the ECB, the CBC, and others, such as the CySec, the CSE and the ATHEX)- The Regulatory Steering Group, led by the Chief Executive Officer (CEO) and composed of executive management, receives regular updates on Regulatory Compliance Risk issues via the Regulatory Affairs Department and Regulatory Compliance Department. The Group Compliance monitors the status of upcoming laws and amendments to existing laws, to ensure that all regulatory developments and requirements are promptly addressed by the Group.- Regulatory compliance risks are identified and assessed using diverse methods as outlined in the Group Compliance Policy. This policy details the compliance framework for the Group, covering its business and legal environment, and assigning compliance responsibilities at both Group and entity levels. Additionally, it ensures the Bank adheres to CBC Internal Governance Directive and EBA Guidelines on Internal Governance.- The Regulatory Compliance Division follows the ORM Risk Assessment Scoring Methodology which is established by the Operational Risk Division with regards to the risk classification process. The Regulatory Compliance Division identifies and informs business areas about new or updated regulations, enabling them to conduct impact assessments and/ or regulatory gap analyses, while the Compliance Division reviews and challenges the latter as the second line of defence.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.1 Principal Risks and other risks and uncertainties (continued)

Technology Risk	
<ul style="list-style-type: none">- Technology risk arises from system downtimes impacting business operations and/ or customer service. Downtimes may be caused by hardware or software failures due to malfunctions, failed processes, human error, or cyber incidents. Use of outdated, obsolete and unsupported systems increase this risk.	<ul style="list-style-type: none">- The Group has in place a Technology strategy designed to support business strategy and customer centric view. The strategy includes investments in skills and technology to minimize system downtimes and security risks, modernization of legacy applications, a risk-based approach to leverage the benefits of Cloud technologies, and investments in new and innovative applications to support business requirements.- The Group implements a collaborative operating model to implement the technology initiatives that support business strategy and its digital agenda. The operating model involves setting up cross-functional teams that combine technical, business and risk skills for accelerated results. Where necessary, the Group engages with appropriate external experts to augment capacity and meet peak demand for technical initiatives while always maintaining good levels of internal skills and capacity.- The Group's policies, standards, governance and controls undergo ongoing review to ensure continued alignment with the Group's Technology strategy, compliance with regulation and effective management of the associated risks.
Third Party Risk	
<ul style="list-style-type: none">- The risk brought onto the organisation by external parties in its ecosystem or supply chain. Such parties include vendors, suppliers, partners, contractors or service providers who have access to internal company or customer data, systems, processes or other privileged information. Third Party Risk, remains of significant importance, and this is primarily due to the increased number of outsourcing engagements and the risks identified through the Third-Party risk assessments.	<ul style="list-style-type: none">- A number of controls are in place which include regular third-party risk assessments on outsourcing/ intragroup and Information and Communication Technology (ICT) contracts, third-party performance assessments, and established third party risk trainings to ensure third-party risk awareness by the Group's staff.- The outsourcing and ICT contracts of the Group should be fully aligned with the EBA Guidelines and Digital Operational Resilience Act (DORA) Regulation on Outsourcing/ ICT Arrangements and/or the Third-Party & Outsourcing Risk Management Policy. In cases where the arrangements in scope are not aligned with the EBA Guidelines, DORA Regulation and/or policies of the Group, risks are identified, and mitigating controls are put in place. Examples of potential risks include inadequate contract clauses, lack of third-party resilience/inadequate due diligence, and over-reliance on third parties.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.1 Principal Risks and other risks and uncertainties (continued)

Insurance and Reinsurance Risk	
<ul style="list-style-type: none"> - The Group, through its subsidiaries EuroLife Ltd and General Insurance of Cyprus Ltd, provides life insurance and non-life insurance, respectively, and is exposed to certain risks particular to these businesses. - Insurance events are unpredictable and the actual number and amount of claims and benefits will vary from year to year from the estimate established using actuarial and statistical techniques. - Insurance risk therefore is the risk that an insured event under an insurance contract occurs and uncertainty over the amount and the timing of the resulting claim exists. - Although the Group has reinsurance coverage, it is not relieved of its direct obligations to policyholders and is thus exposed to credit risk with respect to ceded insurance, to the extent that any reinsurer is unable to meet the contractual obligations assumed under such reinsurance arrangements. 	<ul style="list-style-type: none"> - Both Insurance companies perform their annual stress tests (ORSA) which aim to ensure among others: <ul style="list-style-type: none"> • The appropriate identification and measurement of risks; • An appropriate level of internal capital in relation to each Company’s risk profile; • The application and further development of suitable risk management and internal control systems; - The risk exposure is mitigated by the Group through the diversification across a large portfolio of insurance contracts. The variability of risks is also reduced by careful selection and implementation of underwriting strategy guidelines, as well as the use of reinsurance arrangements. - The creditworthiness of reinsurers is evaluated by considering their solvency and credit rating and reinsurance arrangements are monitored and reviewed to ensure their adequacy as per the reinsurance policy. - In addition, counterparty risk assessment is performed on a frequent basis.
Climate Related & Environmental Risk (C&E)	
<ul style="list-style-type: none"> - Climate and environmental matters are a growing consideration for financial institutions given the increasing effects of climate change globally and the sharp regulatory focus on addressing the resultant risks. The Group’s businesses, operations and assets could be affected by C&E risks over the short, medium and long term. - Accelerating climate change could lead to sooner than anticipated physical risk impacts to the Group and the wider economy and there is uncertainty in the scale and timing of technology, commercial and regulatory changes associated with the transition to a low carbon economy. 	<ul style="list-style-type: none"> - The Group is committed to integrate C&E risk considerations into all relevant aspects of the decision-making, governance, strategy and risk management and has taken the necessary steps to achieve this. - The Group has put in place targets which set transparent ambitions on its climate strategy and decarbonization of its operations and portfolio. An overall Environmental, Social and Governance (ESG) strategy and working plan is thus in place to facilitate these ambitions and address the ECB expectations. - Dedicated teams both within Risk Management and Investor Relations & ESG Department, as well as other resources, have been mobilised across the Group and are engaged in various streams of work such as the measuring of own and financed emissions, the integration of climate risk in the risk management framework and the enhanced green products offering.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.1 Principal Risks and other risks and uncertainties (continued)

Model Risk	
<ul style="list-style-type: none">- Model risk arises from the potential for adverse consequences resulting from decisions based on incorrect or misused model outputs. The Group relies on various models for critical activities, including credit risk quantification and assessment, stress testing, capital and liquidity planning, and provisioning. These models incorporate assumptions, methodologies and data inputs.- Errors in model design, incorrect implementation, insufficient validation, or inappropriate use of models may lead to inaccurate risk measurement, mispricing of products, inadequate capital allocation, or incorrect provisioning levels. Such outcomes could result in financial loss, increased volatility in earnings or regulatory breaches.	<ul style="list-style-type: none">- The Group aims to effectively manage model risk through robust governance, independent validation, and ongoing monitoring to avoid any negative impact on the Group's financial condition, regulatory compliance and overall business performance.

3.1.2 Risk Management Framework

The Board of Directors is responsible to ensure that a coherent and comprehensive Risk Management Framework (the 'framework' or 'RMF') is in place, for the identification, assessment, monitoring and controlling of all risks. The framework ensures that there is proper governance and process for the identification of material and emerging risks, including, but not limited to, risks that might threaten the Group's business model, future performance, liquidity, and solvency. Such risks are taken into consideration in defining the Group's risk appetite, ensuring that the Group's overall business strategy aligns with the Group's risk appetite and remains within the Group's risk bearing capacity, always maintaining appropriate capital and liquidity levels.

The RMF is supported by a strong governance structure and is comprised of several components that are analysed in the sections below. The RMF is reviewed, updated and approved by the Board, following recommendation by the Board Risk Committee at least annually to reflect any changes to the Group's business or to take into consideration of external regulations, corporate governance requirements and industry best practices.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.3 Effectiveness of the Risk Management Framework

The Risk Management Framework has been developed based on the applicable governance requirements included in:

- a) The CBC Directive on Internal Governance of Credit Institutions of 2021, and
- b) The EBA Final report on Guidelines on Internal Governance under CRD 2021.

The Group's management and Board need to be satisfied that the Risk Management Framework is appropriate given the risk profile of the Group and its strategy. As such, the Group has in place a process whereby certain confirmations/representations and warranties as to the effectiveness of Risk policies, procedures and monitoring activities, as part of the Corporate Governance Code's (Code) obligations, are provided by all the business lines and subsidiary companies to the Board through its Audit Committee (AC) on an annual basis.

The Risk Management Division (RMD), having received such quarterly confirmations/representations from the business lines and subsidiary companies, subsequently provides confirmations/representations and warranties as to the effectiveness of its policies, procedures and monitoring activities to the Board through its AC.

The RMD is subject to independent internal reviews performed by the internal audit function as well as external assessments as requested, from time to time, by the regulator (ECB and CBC) or other relevant authorities. Such assessments may address any part of the Risk Management Framework including the Group's compliance with the risk appetite statement. Any resultant findings are addressed in a timely and effective manner.

3.1.4 Risk Governance

The responsibility for the governance of risk at the Group lies with the Board of Directors (the 'Board') which is ultimately accountable for the effective management of risks and for the system of internal controls in the Group. The Board is assisted in its risk governance responsibilities by the Board Risk and Board Audit Committees (RC and AC respectively) and at executive management level by the Executive Committee (EXCO), Asset and Liability Committee (ALCO), Acquisition & Disposal Committee (ADC), Executive Technology Committee (TC), Sustainability Committee (SC), Data Quality & Governance Committee (DQGC) and the Credit Committee 3 (CC3).

The RC supports the Board on risk oversight matters including the monitoring of the Group's risk profile and of all risk management activities whilst the AC supports the Board in relation to the effectiveness of the system of internal controls. In addition, discussion and escalation processes are in place through both the Board and executive management level committees that provide for a consistent approach to risk management and decision-making.

The Executive Committee is the most senior management leadership team and has primary authority and responsibility for the day-to-day operations of and the development of strategy for the Group.

The Asset and Liability Committee is the Group's executive committee tasked with decision-making in respect of the Group's balance sheet structure, including funding, liquidity, interest rate risk in the banking book from an economic value and net interest margin (NIM) perspective, foreign exchange (FX) hedging risks and other market risks to ensure it enables the delivery of the Group's Strategic Plan. It provides oversight of funding and liquidity, market and equity/investments risk as well as balance sheet pricing in line with the relevant risk frameworks and policies in accordance with risk appetite.

The Acquisition & Disposal Committee responsibility is to assess and approve acquisitions or disposals of the Bank's non-treasury related assets, always in line with the relevant policies and procedures and aligned with the Bank's Risk Appetite Statement (RAS) and strategy.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.4 Risk Governance (continued)

The Executive Technology Committee is responsible, amongst others, for overseeing technology related risks. This includes ensuring that appropriate justification is in place for the outsourcing of critical systems to third party providers, monitoring, measuring and addressing IT related risks, reviewing and addressing issues and risks escalated through the established governance framework, and addressing any relevant Information Security matters. The CRO is a member of the Executive Technology Committee. The committee escalates IT related matters to the EXCO and the Executive Director of Technology & Operations and the Chief Digital Officer escalate and report monthly on all IT related matters to the Board Technology Committee.

The purpose of the DQGC is to communicate data related updates and escalate issues for discussion and resolution at senior management level. The DQGC escalates and reports on all data related matters to the EXCO and the RC. The Chair of the DQGC provides quarterly updates to the Board.

The CC3 is responsible for developing and monitoring credit policy within the Group and approval of all large credit transactions. CC3 comprises senior management members and senior credit officers and provides a formal mechanism for the Group to exercise the highest level of executive management credit authority over the most material Group single name exposures. The CC3 is responsible for the review and approval of credit applications that fall outside the approval limits of Business Lines and the Credit Sanctioning Department, in accordance with the Bank's delegated credit approval framework. All exposures above certain levels require approval by CC3 and/or recommendation for approval to the Board. Other exposures are approved according to a structure of tiered individual authorities which reflect credit competence, proven judgement and experience.

Discussion around risk management is supported by the appropriate risk information submitted by the RMD and Executive Management. The Chief Risk Officer (CRO) or his representatives participate in all such key committees to ensure that the information is appropriately presented, and that the RMD's position is clearly articulated.

Furthermore, certain roles within the Group are critical as they carry specific responsibilities with respect to Risk Management and include the CRO and the CEO.

3.1.5 Accountability and Authority

The RMD operates independently through:

- Organisational independence from the controlled activities;
- Unrestricted and direct access to Executive Management and the Board of Directors (Board), either through the RC or directly;
- Direct and unconditional access to all business lines that have the potential to generate material risk to the Group. Front Line managers are required to cooperate with the RMD Managers and provide access to all records and files of the Group, as well as any other information necessary;
- A separate and independent budgeting process whereby the RMD's budget is submitted to the Board for approval following RC recommendation;
- The CRO is a member of the EXCO and holds voting as well as veto rights in key executive and operational committees.

Furthermore, this independence is also ensured as:

- The CRO is assessed annually by the RC jointly with the Human Resources & Remuneration Committee;
- The CRO maintains a close working relationship with both the RC and its Chairperson which includes regular and frequent communication both during official RC meetings as well as unofficial meetings and discussions.

The RMD reports to the CRO and is ultimately accountable to the Board through the RC in coordinating the effective and efficient running of the Group's Risk Management Framework. The Board and Executive Management provide the necessary support to the Division. The role of RC is described in Section 3.3.4.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.5 Accountability and Authority (continued)

Board and Management Committees

Risk related topics are regularly covered by the various Board and Management Committees in the discharge of their duties. This contributes to the overall monitoring of Risk Management while the CRO's participation in these committees ensures both that the topics are appropriately presented, and that Risk Management's position is clearly articulated.

Topics regularly covered include:

- Update on material and emerging risks and performance trends;
- Risk perspective on the Group and divisional strategic plans;
- Risk appetite formulation;
- Stress test, ICAAP and Internal Liquidity Adequacy Assessment Process (ILAAP) results and analysis;
- Product, sector and country limits;
- Risk policies review;
- Asset disposal;
- On-boarding of risk.

In addition to regular topics, the committees consider ad-hoc papers on current risk topics such as economic and market developments, political events etc.

Senior Management

Certain roles within the Group are critical as they carry specific responsibilities with respect to Risk Management. These include:

Chief Executive Officer (CEO)

The CEO is accountable for leading the development of the Group's strategy and business plans in a manner that is consistent with the approved risk appetite and for managing and organising Executive Management to ensure these are executed. It is the CEO's responsibility to manage the Group's financial and operational performance within the approved risk appetite.

Chief Risk Officer (CRO)

The CRO leads an independent RMD across the Group, including its subsidiaries. The CRO is responsible for the execution of the Risk Management Framework and the development of risk management strategies. The CRO is expected to challenge business strategy and overall risk taking and risk governance within the Group and independently submit his findings, as necessary, to the RC. The CRO reports to the RC and for administrative purposes has a dotted line to the CEO.

3.1.6 Risk Identification

The risk identification process is comprised by two simultaneous but complementary approaches, namely, the top-down and the bottom-up approaches. The top-down process is led by Senior Management and focuses on identifying the Group's material risks, whilst the bottom-up approach risks are identified and captured through several methods such as the RCSA process, incident capture, fraud events capture, regulatory audits, direct engagement with specialized units and other. The risks captured by these processes are compiled during the annual ICAAP process and its quarterly updates and form the Groups' material risks.

To ensure a complete and comprehensive identification of risks, the Group has integrated several key processes into its risk identification process, including the:

- Internal Capital Adequacy Assessment Process ("ICAAP");
- Internal Liquidity Adequacy Assessment Process ("ILAAP");
- Internal and external stress testing exercises;
- Group Financial Plan compilation process;
- Regulatory, internal and external reviews, and audits.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

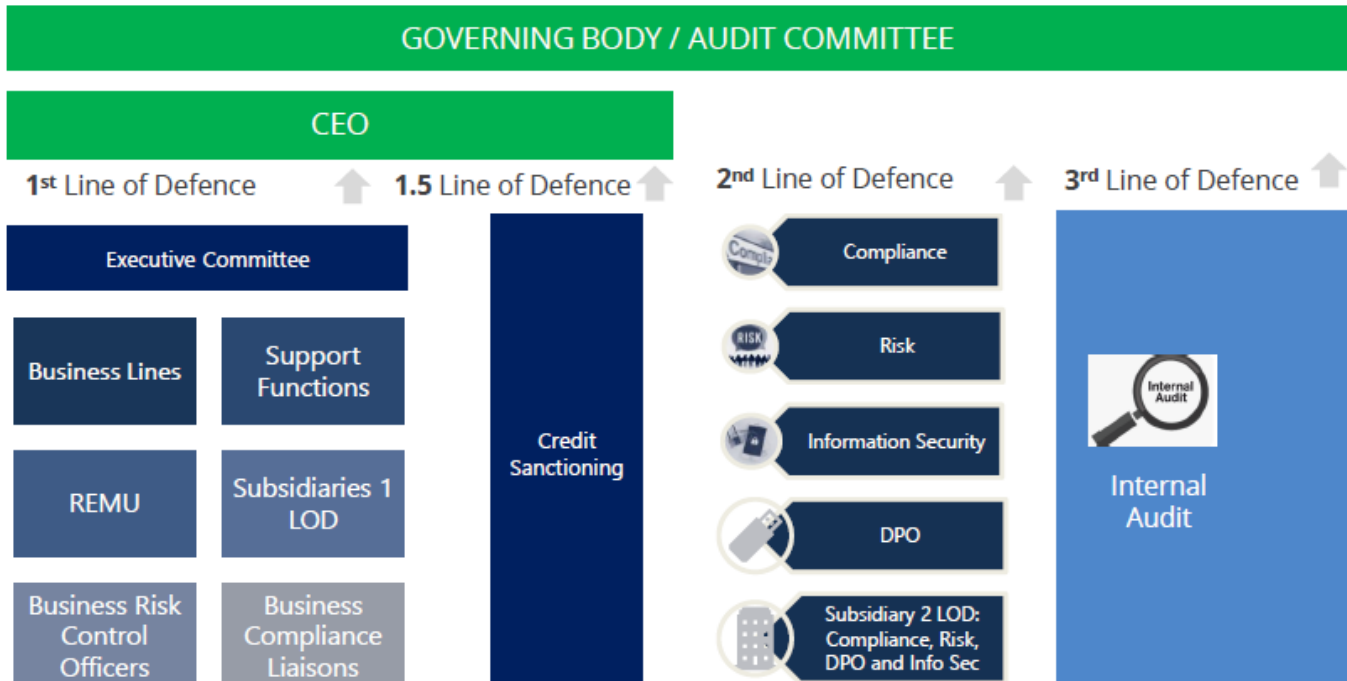

3.1.7 Three Lines of Defence

In alignment with the regulatory guidelines on corporate governance, the Group applies the "Three Lines of Defence" model to ensure robust risk and compliance management. This framework clearly defines the roles and responsibilities across the Group, promoting effective oversight, control and assurance, through appropriate segregation of duties on the risk management process.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.7 Three Lines of Defence (continued)

First Line of Defence

The first line of defence includes functions that own and manage risks as part of their responsibility for achieving objectives and are responsible for implementing corrective actions to address, process and control deficiencies identified in their processes. It comprises of the management and staff of business lines and support functions who are directly responsible for the delivery of products and/or services. Support functions include but are not limited to the Human Resources, the Legal Services, the Information Technology, the Central Operations, etc. The first line of defence ensures that controls are designed into systems and processes under the guidance of the second line of defence.

1.5 Line of Defence (Credit Sanctioning Department)

The Credit Sanctioning department (CS) is responsible for evaluating credit applications that fall outside the approval limits of the Business Lines and require approval by Higher Approving Authorities. CS has specific credit-approval limits, which are applied when assessing and approving credit requests. Credit Sanctioning is organised into specialised teams: CS Retail, CS SME, CS Corporate and the CS Credit Committee 3 team which reviews and recommends cases specifically for approval at CC3 level. Their responsibilities include identifying risks and potential breaches of Credit Risk Policies and preparing recommendations that may include terms and conditions to mitigate these risks.

Second Line of Defence

The second line of defence includes functions that oversee the compliance of the first line management and staff with the regulatory framework and risk management principles. It comprises of the RMD, Information Security and Compliance functions. The second line of defence sets the corporate governance framework of the Group and establishes policies and guidelines that the business lines and support functions, Group entities and staff should operate within. The second line of defence also provides an independent oversight of the risk profile and the risk management framework.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.7 Three Lines of Defence (continued)

Third Line of Defence

The third line of defence is the Internal Audit Division (IA) which provides independent assurance to the Board and the EXCO on the design, adequacy and operating effectiveness of the Group’s internal control framework, corporate governance and risk management processes, including the manner in which the first and second lines of defence achieve risk management and control objectives.

Risk Management Division (RMD) relation with control functions

Control functions meet on a quarterly basis at Manager (Control Functions Forum) and Director (Control Functions Heads) level in order to assess and propose areas for further enhancement of cooperation and communication amongst them, as well as for taking advantage of synergies and avoiding duplication of work.

3.1.8 Risk Management Division (RMD)

The RMD is responsible for the Group’s risk management framework. The RMD is responsible for the risk identification and risk management of the Group on a day-to-day basis, establishing risk policies as well as monitoring risk profiles. The risk management process is integrated into the Group’s internal control system. The Group’s independent Risk function designs and maintains the framework. The RMD is led by the Chief Risk Officer who provides oversight and monitoring of all risk management activities. The RMD is organized into several departments, each of which is specialized in one or several categories of risks. The organization of the RMD reflects the types of risks inherent in the Group.

*The Manager CRM & RA and the Chief Data Officer also report directly to the Data Quality & Governance Committee.

**The Head Quantitative Strategy & Model Validation within the Strategy & Market Risk Department also reports directly to the Chief Risk Officer.

The RMD organisational model is structured so as to:

- Define risk appetite and report regularly on the status of the risk profile;
- Ensure that all material and emerging risks have proper ownership, management, monitoring and clear reporting;
- Promote proper empowerment in key risk areas that will assist in the creation of a robust risk culture;
- Provide tools and methodologies for risk management to the business units;
- Monitor Key Risk Indicators (KRIs).

The RMD is responsible for the risk management across the Group companies.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.9 Risk Culture

A robust risk culture is a substantial determinant of whether the Group will be able to successfully execute its strategy within its defined risk appetite. The RMD is committed to fostering a robust governance and risk culture that aligns with the Group's strategic objectives and risk appetite. This includes ensuring that risk management practices are integrated into all aspects of the business, promoting a culture of risk awareness, and maintaining effective communication and accountability across the Group.

An action plan towards the implementation of a firm-wide risk culture is in place across the Group involving various stakeholders including all the Control Functions, Human Resources, Legal Services, Company's Secretary Office and other. Communications and awareness sessions, together with dedicated training, are regularly conducted to promote Risk Culture to all staff, with guidance from the Risk Culture Liaisons, who are assigned for each division, for monitoring and improving risk culture scores within their area. In addition, the Role of the "Business Risk and Control Officers", dedicated Control Functions liaisons for non-financial risks, within the Front-Lines of the Bank (Consumer, Corporate, IBUs and Affluent Banking), contributes on the effort for promoting Risk Culture across the organisation. Risk Culture has also recently been included as an additional pillar within staff performance appraisals. As part of the action plan set and the overall Group's initiatives, the Board has set the "tone from the top" through the 'RiskWiser' campaign. This initiative comprises a series of communications, including videos and podcasts, addressed to all staff by members of the Board of Directors and Executive Management, with the objective of strengthening risk awareness and embedding a robust risk culture across the Group.

The action plan is under the auspices of the CRO and the Executive Director People and Change and the Board retains close oversight through Mr Adrian John Lewis, Senior Independent Director.

The RMD has a leading role in the action plan which includes, among other actions, the measurement of risk culture, both at Bank wide and divisional level, through a specific Risk Culture Dashboard, the communication of a series of topics aiming at re-enforcing risk culture and the provision of specific training for areas such as credit underwriting and other risk management related topics.

3.1.10 Risk Appetite Framework (RAF)

The objective of the RAF is to set out the level of risk that the Group is willing to take in pursuit of its strategic objectives, outlining the key principles and rules that govern the risk appetite setting. It comprises the Risk Appetite Statement (RAS), the associated policies and limits where appropriate, as well as the roles and responsibilities for the implementation and monitoring of the RAF.

The RAF is a key management tool to better align business strategy (financial and non-financial targets) with risk management, and it should be perceived as the focal point for all relevant stakeholders within the Group, as well as the supervisory bodies, for the assessment of whether the undertaken business activities are consistent with the set risk appetite.

The RAF is updated on an annual basis and on an ad-hoc basis in cases where the prevailing economic conditions, significant internal developments, or regulatory guidance, demand so to ensure it remains fit for purpose. The ultimate approval of the RAF lies with the Board, following recommendation from the RC.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.10 Risk Appetite Framework (RAF) (continued)

Risk Appetite Statement (RAS)

The RAS is the articulation, in written form, of the aggregate level and types of risk that the Group is willing to accept in the course of executing its business objectives and strategy. It includes qualitative statements as well as quantitative measures expressed relative to Financial, Non-Financial risks and Strategic Risks. The selected quantitative indicators appropriately track the underlying risks whilst effectively conveying the necessary information. The qualitative statements articulate the reasoning behind assuming or avoiding certain types of risk and cover areas that are not fully quantifiable. As part of the overall framework for risk governance, it forms a boundary condition to strategy and guides the Group in its risk-taking and related business activities.

Financial Risks	Non-Financial Risks
Capital Risk	Operational Risk
Business Risk	Transaction Processing & Execution
Credit Risk	Reputational Risk
Market Risk	Legal Risk
Interest Rate Risk	Information Security (incl. Cyber) Risk
Concentration Risk	Project Risk
Funding & Liquidity Risk	Third Party Risk
Property Price Risk	External and Internal Fraud Risk
Climate & Environmental	Data Accuracy & Integrity Risk
Counterparty Risk	Model Risk
Credit Spread Risk	Technology Risk
	Regulatory Compliance / Conduct Risk
	Financial Crime Risk

Specific RAS Indicators serve as the reference points for cascading specific operational limits to the respective Business Lines/Units ensuring consistency with the overall risk appetite of the Group as formalized and quantified in the RAS Indicators.

Risk Appetite and Financial Plan Interaction

The Group's Financial Plan is integral to how the Group manages its business and monitors performance. It informs the delivery of the Group's strategy and is aligned to the Risk Appetite Statement. The RAS is subject to an annual review process during the period in which the Group's Financial Plan as well as the divisional strategic plans are being formulated. The interplay between these processes provides for a cycle of feedback during which certain RAS indicators (such as the ones related to minimum regulatory requirements) act as a backstop to the Group's Financial Plan, while for other indicators the Group's Financial Plan provides input for risk tolerance setting. Furthermore, the Group Financial Plan is tested against the RAS indicators to ensure it is within the Group's risk appetite.

RAF and Strategic Decision Making

Strategic papers presented to the Board for approval should be accompanied by a relevant risk assessment conducted by the RMD, to inform of any risk considerations and support the Board of Directors in its decision, ensuring that RAF provisions are adhered to in the decision-making process, supporting a robust risk culture. Depending on the nature of the initiative, the risk assessment aims to identify and, where possible, quantify the impact of relevant risks, on risk profile, capital, liquidity, and examine whether it aligns with the risk appetite.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.11 Risk Taxonomy

In order to ensure that all risks the Group may face are identified, assessed and managed, a comprehensive risk taxonomy is maintained. The risk taxonomy is a key component of the Internal Capital Adequacy Assessment Process (ICAAP) and the Internal Liquidity Adequacy Assessment Process (ILAAP). The taxonomy ensures that the coverage of risks is comprehensive and identifies potential linkages between risks.

The risk taxonomy provides a multi-level categorization of different risk types/factors enabling the Group to assess, aggregate and manage risks in a consistent and comparable manner through a common risk language and mapping. It also ensures coverage of the Group's risk profile and facilitates the identification of interdependencies and linkages between different risk categories.

It also ensures coverage of the Group's risk profile and facilitates the identification of interdependencies and linkages between different risk categories.

3.1.12 Risk Management Policies

The entire Risk Management Policy universe enables a comprehensive and coherent framework for risk management linked to the Group's Risk Appetite. The policies, methodologies and procedures for the Risk Management Function are reviewed, updated and refined to better reflect market conditions and new regulatory requirements.

Each policy has a policy owner who is responsible to ensure its application across the Bank and the Group, provide advice to business units regarding its application, provide training on policy where required and undertake its annual review of the Policy.

The policies and / or any substantial changes to them are recommended for approval to the BoD by the RC, following recommendation by the ALCO or by the EXCO, and are subject to annual review. Each subsidiary is expected to have in place its own risk policies which will be based on the principles of these Group Risk Policies. All staff of the Group should be aware of the Risk policies.

3.1.13 Risk monitoring and reporting

Risk reporting ensures that both the Executive Management and the Board can monitor the main risks of the Group and the maintenance of the Group's risk profile within tolerances for exposure to risk. Risk reporting processes are in place and encompass reporting that facilitates:

- Measurement of the Group's compliance with the Risk Appetite Statement, highlighting any violation of indicators as well as the remediation actions.
- Provision of standard and consistent update on material and emerging risks, key risk issues and performance against set KRIs ensuring that the Executive Management and the Board have full visibility over risk developments.
- Monitoring and enhancement of data quality, including accuracy completeness and consistency of risk information used for risk assessments and internal reporting purposes.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.14 Recovery Plan

The Group Recovery Plan (RP) is drawn up and maintained by the Group and is required to be updated at least annually or after a material change to the legal or organisational structure, the Group's business, or financial situation (which could have a material effect on the RP) or when the competent authority requires more frequent update.

The Group's RP:

- Distinguishes between critical and non-critical functions, as well as core and non-core business lines including major subsidiaries;
- Provides for the governance mechanism, available during recovery emergency situations, which sets the escalation and decision-making process and ensures timely and appropriate action plan during crisis situations;
- Defines the key recovery and early warning indicators to promptly identify stress situations;
- Includes stress scenarios in order to identify the level of losses in a near default situation;
- Determines specific recovery options that could be implemented to address liquidity and capital issues arising as a result of stress situations that leverage on the Group's own resources;
- Includes a communication plan in the event of a crisis;
- Describes the preparatory measures for the operationalisation of the RP in cases of stress.

The Group prepared and submitted to the ECB the updated RP in October 2025 in line with the ECB's guidance.

3.1.15 Stress Testing

Stress testing is a key risk management tool used by the Group to provide insights on behaviour of different elements of the Group in a crisis scenario and to assess the Group's resilience and capital and liquidity adequacy. To make this assessment, a range of scenarios is used, based on variations of market, economic and other operating environment conditions. Stress tests are performed for both internal and regulatory purposes and serve an important role in:

- Understanding the risk profile of the Group;
- Evaluating whether there is sufficient capital or liquidity adequacy under stressed conditions (ICAAP and ILAAP) so as to put in place the appropriate mitigants;
- Evaluating of the Group's strategy;
- Establishing or revising limits;
- Assisting the Group to understand the events that might push the Group outside its risk appetite.

The Group carries out stress testing through a combination of bottom up and top-down approaches. Scenario and sensitivity analysis follow a bottom-up approach, whereas reverse stress testing follows a top-down approach.

Through stress tests, material risks, emerging trends and Risk Appetite indicators are translated into quantitative and qualitative analyses, enabling Management and the Board to assess resilience under stress scenarios. The results of these exercises are formally reported and incorporated into strategic planning. If the stress testing scenarios reveal vulnerability to a given set of risks, management makes recommendations to the Board, through the RC, for remedial measures or actions.

The Group's stress testing programme embraces a range of forward-looking stress tests and takes all the Group's material risks into account. These key internal exercises include:

- Stress testing undertaken in the context of the Internal Capital Adequacy Assessment Process (ICAAP);
- Stress testing applied to the funding and liquidity plan in support of the Internal Liquidity Adequacy Assessment Process (ILAAP);
- Annual recovery stress tests which use scenarios to assess the adequacy of recovery indicators of both capital and liquidity in identifying the recovery plan options used to exit that stress;
- Ad hoc stress testing as and if required, including in response to regulatory requests;

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.15 Stress Testing (continued)

- Stress testing undertaken for the insurance subsidiaries in the context of the Own Risk and Solvency Assessment (ORSA);
- Stress testing undertaken for the investment firm subsidiary in the context of the Internal Capital Adequacy and Risk Assessment (ICARA).

Other stress testing activity

The Group's stress testing programme also involves undertaking assessments of liquidity scenarios, market risk sensitivities and scenarios, and business-specific scenarios. Specifically, the Market and Liquidity Risk Department performs additional stress tests, which include the following:

- Monthly stress testing for interest rate risk (Supervisory Outlier Test (SOT) 2% shock on Economic Value (EV) and Net Interest Income (NII));
- Quarterly stress testing for interest rate risk (based on the six predefined Basel interest rate scenarios which involve flattening, steepening, short up, short down, parallel up, parallel down shocks), the impact is estimated on EV and NII;
- Quarterly stress testing on items that are marked to market: impact on profit/loss and reserves is indicated from changes in interest rates and prices of bonds and equities.

2025 EU-wide stress test ("EBA Stress Test")

The Group has participated in the 2025 EU-wide stress test exercise as one of the "other SSM Significant Institutions". The Stress Test exercise was launched in January 2025, and the results were published in August 2025. The stress test results are used to update each bank's Pillar 2 Guidance in the context of the SREP. Qualitative findings on weaknesses in banks' stress testing practices could also affect their Pillar 2 Requirements and inform other supervisory activities.

The 2025 EU-wide stress test adopted a constrained bottom-up approach, incorporating some top-down elements. Balance sheets are assumed to remain constant, with the primary focus being the evaluation of the impact of adverse shocks on banks' solvency. Participating banks were required to estimate the progression of common risk factors (credit, market, counterparty, and operational risks) under a baseline and an adverse scenario. Additionally, banks have also projected how these scenarios affected key income streams. For net fee and commission income, securitisation risk weights, and the credit loss trajectory of sovereign exposures, banks used pre-defined parameters. In addition, the projections of net interest income were centralised.

In this year's exercise, Bank of Cyprus was placed in bucket 1 for maximum CET1 ratio depletion, minimum CET1 ratio, and minimum Tier 1 leverage ratio. The Bank recorded a maximum CET1 ratio depletion of under 300 basis points, a minimum CET1 ratio of at least 14%, and a minimum Tier 1 leverage ratio of at least 6%. The Joint Supervisory Team acknowledged the Bank's timely and accurate submissions, high quality data, and well-structured documentation.

3.1.16 ICAAP, Pillar II and SREP

3.1.16.1 ICAAP

The ICAAP is a process whose main objective is to assess the Group's capital adequacy in relation to the level of underlying material risks that may arise from pursuing the Group's strategy or from changes in its operating environment. More specifically, the ICAAP analyses, assesses and quantifies the Group's material risks, establishes the current and future capital needs for the material risks identified and assesses the Group's capital adequacy under baseline scenario and stress testing conditions. Multiple scenarios are considered in the ICAAP, incorporating both systemic and idiosyncratic events and are informed by the Group's material risks. The process aims to ensure that the Group has sufficient capital, under both the base and stress scenarios, to support its business and achieve its strategic objectives as per its Board approved Risk Appetite and Strategy.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.16 ICAAP, Pillar II and SREP (continued)

The annual ICAAP is approved by the Board following recommendation from the joint EXCO/ALCO and the RC. The Group undertakes quarterly reviews of its ICAAP results, as well as on an ad-hoc basis if needed, which are submitted to the ALCO and the RC, where actual and forecasted information is considered. During the quarterly review, the Group's risk profile is reviewed and any material changes/ developments since the annual ICAAP exercise are assessed in terms of capital adequacy.

The 2025 ICAAP submitted to the ECB in March 2026, indicates that the Group has sufficient capital and available mitigants to support its risk profile and its business and to enable it to meet its regulatory requirements, both under baseline and stressed conditions.

3.1.16.2 Pillar II and SREP

The ECB, as part of its supervisory role, has been conducting the SREP and onsite inspections on the Group. SREP is a holistic assessment, amongst other things, of the Group's business model, internal governance and institution-wide control arrangements, risks to capital and adequacy of capital to cover these risks and risks to liquidity and adequacy of liquidity resources to cover these risks. The objective of the SREP is for the ECB to form an up-to-date supervisory view of the Group's risks and viability and to form the basis for supervisory measures and dialogue with the Group.

Additional capital and other requirements could be imposed on the Group as a result of these supervisory processes, including a revision of the level of Pillar II add-ons capital requirements as these are a point-in-time assessment and therefore subject to change over time.

The minimum Pillar I Total Capital (TC) requirement is 8.00% and may be met, in addition to the 4.50% CET1 requirement, with up to 1.50% by AT1 capital and with up to 2.00% by T2 capital. The Group is also subject to additional capital requirements for risks which are not covered by the Pillar I capital requirements (Pillar II add-ons).

Applicable Regulation allows a part of the said P2R to be met also with AT1 and T2 capital and does not require solely the use of CET1.

The Group's minimum phased in CET1 capital ratio requirement for 2025 was 11.38% (2024: 11.34%), comprising a 4.50% Pillar I requirement, a 1.55% P2R, the CCB of 2.50%, the O-SII Buffer of 1.9375% and the CcyB of c.0.90%.

The Group's minimum phased in TC ratio requirement for 2025 was 16.08% (2024: 16.05%), comprising an 8.00% Pillar I requirement (of which up to 1.50% could be in the form of AT1 capital and up to 2.00% in the form of T2 capital), a 2.75% P2R, the CCB of 2.50%, the O-SII buffer of 1.9375% and the CcyB of c.0.90%.

Following the annual SREP performed by the ECB in 2025 and based on the final SREP Decision received in October 2025, effective from 1 January 2026, the Group's minimum phased in CET1 capital ratio and Total Capital ratio requirements decreased, when disregarding the phasing in of the O-SII buffer. The Pillar II requirement decreased by 25 bps to 2.50%, effective from 1 January 2026.

On 1 January 2026 the Group's minimum phased in CET1 capital ratio requirement is set at approximately 11.55%, comprising a 4.50% Pillar I requirement, a 1.41% P2R, the CCB of 2.50%, the O-SII Buffer of 2.25% and CcyB of approximately 0.90%.

On 1 January 2026, the Group's minimum phased in Total Capital ratio requirement is set at approximately 16.15%, comprising an 8.00% Pillar I requirement, of which up to 1.50% can be in the form of AT1 capital and up to 2.00% in the form of T2 capital, a 2.50% P2R, the CCB of 2.50%, the O-SII Buffer of 2.25% and the CcyB of approximately 0.90%.

As mentioned in Section 2.2, the CcyB of the Group will increase further following the increase by the CBC of the total risk exposure amount in Cyprus from 1.00% to 1.50%, effective from mid-January 2026.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.1.16 ICAAP, Pillar II and SREP (continued)

The non-public guidance P2G has also been revised downwards compared to 2025, based on the final SREP Decision.

The EBA final guidelines on SREP and supervisory stress testing and the SSM 2018 SREP methodology provide that own funds held for the purposes of P2G cannot be used to meet any other capital requirements (Pillar I requirement, P2R or the combined buffer requirement) and therefore cannot be used twice.

3.2 Risk Management Objectives and Policies

3.2.1 Credit Risk Management

Credit Risk Definition

Credit risk is defined as the current or prospective risk to earnings and capital arising from an obligor's failure to meet the terms of any contract (actual, contingent or potential claims both on and off-balance sheet) with the Group or failure to perform as agreed. Within the general definition of credit risk, the Bank identifies and manages the following types of risk:

- Counterparty credit risk (CCR): the Group's credit exposure with other counterparties;
- Settlement risk: the risk that a counterparty fails to deliver the terms of a contract with the Group;
- Issuer risk: the risk to earnings arising from a credit deterioration of an issuer of instruments in which the Group has invested;
- Concentration risk: the risk that arises from the uneven distribution of exposures to individual borrowers or by industry, collateral, product, currency, economic sector or geographical regions;
- Country risk: the Group's credit exposure arising from lending and/or investment or the presence of the Group to a specific country;
- Environmental, Social, Governance Risk (ESG): these risks are managed through dedicated guidelines/ questionnaires and assessment, including an environmental and social due diligence process, which have been incorporated in the loan origination process.

The Group takes a comprehensive approach to risk management with a defined Risk Management Framework and a specific RAS which is approved annually by the RC and the Board as indicated in Sections 3.1.2 – 3.1.13.

The Credit Risk Management Department (CRMD) covers a wide range of activities, which commences at the stage of the assessment of credit risk, continues at the stage of credit risk identification and measurement through reporting and provisions respectively, and ending up at the workout and collection stage.

There are various tools involved in the management of credit risk, including systems used to measure and assess customer risk, credit approval limits and structure, lending criteria, monitoring of customer advances and methods of mitigating risk. In addition, Credit Risk Management is involved in the review of new products offered by the Bank, the strategies put forward by the various Divisions as well as being involved in key Group projects such as the automation of the credit submission and approval process.

The functional activities of Credit Risk Management are organised through the following sub-departments, each of which has distinct responsibilities and covers specific risk areas.

Credit Risk Policy (CRP)

The CRP unit develops policies, guidelines and approval limits necessary to address the credit risk in the Group. These documents are reviewed and updated at least annually or earlier if deemed necessary to reflect any changes in the Group's risk appetite and strategy and the work environment/economy.

The Group has implemented prudent policies and a proactive approach for the monitoring of credit risk.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.1 Credit Risk Management (continued)

Corporate & SME Credit Risk (CSCR)

CSCR unit has the primary role of independently reviewing from a credit risk perspective, all the credit applications that fall under the approval authority of Credit Committee 3, and additionally specific applications falling under the approving authorities of Credit Sanctioning Department, in order to support the role of observer with a veto power, ensuring compliance to the Bank's Policies and guidelines.

Data Analysis and Provisions unit (DA&P)

The DA&P is responsible for monitoring the Group's credit portfolio, implementing the credit provisioning policy and reports on the relevant credit risk metrics. In addition, the unit is responsible for all credit risk regulatory reporting.

3.2.1.1 Credit Limits and Process

Regarding credit risk, the Bank sets and monitors Risk Appetite limits. Furthermore, in relation to the credit granting process, a limit framework is in place where both its structure and its general rules are documented in the Bank's Lending Policy.

Credit Risk Management has the responsibility to review the structure and level of approval limits on an annual basis or earlier if deemed necessary and to communicate the limits to the relevant Bank's departments.

The structure of the limits takes into account:

- The type / size of each credit facility;
- The type / quality / value of the collateral;
- The security gap;
- The borrower / group funded and non-funded exposure;
- The GRG / Application Scoring for natural persons or risk grade for legal entities as calculated by CreditLens;
- Any adverse data regarding the client (e.g. arrears/excesses, bankrupt, caution listed, judgement guarantors, watch listed);
- Any deviations to policy.

Relevant circulars and guidelines are in place that provide limits and guidelines for the approval of credit applications. The Bank currently has approving authorities which have limits and are authorized to approve granting, review and restructuring of credit facilities (e.g. Credit Sanctioning Department, Credit Committee 3, Restructuring & Recoveries Committee etc).

3.2.1.2 Risk Identification, Measurement, Control and Reporting

The Group has adopted methodologies and techniques for risk identification, measurement and reporting of credit risk. These methodologies are revised and modified whenever deemed necessary to reflect changes in the financial environment and adjusted to be in line with the Group's overall strategy and its short-term and long-term objectives.

Management, monitoring and control of customer advances

Monitoring of credit quality

The Group dedicates considerable resources to assess credit risk and to correctly reflect the value of the assets on its balance sheet in accordance with regulatory and accounting guidelines. This process can be summarised in the following stages:

- Analysing performance and asset quality;
- Measuring exposures and concentrations;
- Raising allowances for impairment.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.1.2 Risk Identification, Measurement, Control and Reporting (continued)

Post-approval monitoring is in place to ensure adherence to both, terms and conditions set in the approval process and Credit Risk policies and procedures. Such monitoring includes:

- Quality assurance and sample testing to analyse and report adherence to the main pillars of various Credit Risk policies, relating, among others, to assessment of the repayment ability and sensitivity analysis on borrowers' repayment ability, data quality checks and whether deviations/exceptions from policies are properly justified and approved.
- Quantitative analysis of existing bank's portfolio relating to:
 - Performing exposures & early warning indicators: arrears, excesses, limit utilization, undisbursed loan balance, loan repayments and cash collections, customers marked as high risk;
 - Non-performing & forbore exposures: Daily and monthly exit and entry, problematic restructurings, performance post restructurings and expected NP and forbearance exit dates;
 - New lending analysis;
 - Portfolio analysis by sector/industry/other characteristics.

A key aspect of credit risk is credit risk concentration which is defined as the risk that arises from the uneven distribution of exposures to individual borrowers, specific industry or economic sectors, geographical regions, product type or currencies. The monitoring and control of concentration risk is achieved by limit setting (e.g. sector and name limits) and reporting them to senior management.

It is noted that within Risk Management a separate department is in place, the Credit Risk Control & Monitoring Department, that independently reports to the CRO and is tasked with carrying both a control and a monitoring function in relation to credit risk.

Collateral revaluations

Credit Risk Control & Monitoring produces a comprehensive report, on a monthly basis, of all mortgaged properties that require revaluation, broken down per unit and per banker. The report is communicated to the responsible business line directors in order to take necessary actions to minimise the number of mortgaged property revaluations that are overdue.

In addition, mortgaged collateral is monitored through the relevant CBC property indices (Central Bank Commercial and Residential Property indices). Indexed values of mortgaged properties have been incorporated in the customer's collateral report, so that credit officers can take the appropriate action when submitting an application for credit/restructuring.

Borrowers' audited financial statements

Risk Solutions & Model Risk Management monitors the submission of borrowers' audited financial statements as well as management accounts on a quarterly basis by preparing an analysis of all pending financial statements. The report is communicated to the line directors so that the appropriate corrective measures are taken.

Concentration

The Data Analysis & Provisions Unit actively monitors on a monthly basis the concentration limits set and reports these to the senior management through the monthly Risk Report.

New products/services

The Group's products and services have an inherent credit risk, therefore Credit Risk Management is in close cooperation with other departments (e.g. Retail) and examines all new, expanded or modified products and services from a credit risk perspective; that is, whether the new product satisfies the Group's RAS, its characteristics are according to the credit policy and the financial analysis includes all related risks.

Portfolio Quality Indicators/KPIs

Monitoring closely the quality/performance of the Group's client portfolio is of great importance. Sound credit monitoring practices can help the Group detect early signs of credit deterioration and thus take promptly remedial action to minimise losses. Monitoring is done both on a single loan/customer level/customer group (where applicable) and on an overall portfolio level.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.1.2 Risk Identification, Measurement, Control and Reporting (continued)

Customer Reviews

Frequent reviews of customer facilities are performed depending on the risk level and customer exposure in adherence with the relevant CBC Directive on Credit Granting and Review Processes. In general, legal entities are reviewed on an annual basis while physical entities every three years (except for exposures over €300 thousand which are reviewed every two years). A more frequent review is deemed necessary for customers with specific characteristics e.g. forborne. The Bank has also introduced an automated process for the review of both physical and legal entities, based on specific criteria and thresholds set by Credit Risk Management.

Internal Audit

The Internal Audit department conducts, on a periodic basis, compliance audits in order to determine that credit activities and in particular approval authorities are in compliance with the Bank's credit policies and procedures and to ensure that approved credits are authorised within the established guidelines and limits.

3.2.1.3 Credit Risk with Correspondent Banks and Countries

The Market & Liquidity Risk Department (MLR) is responsible for the credit risk, with correspondent banks and countries. CCR is discussed in Section 7 and Country risk is analysed below.

Country Risk

Country Risk refers to the possibility that sovereign or other borrowers of a particular country may be unable or unwilling to fulfil their foreign obligations for reasons beyond the usual risks which arise in relation to all lenders.

Country risk affects the Group via its operation or investments in other countries (Money Market (MM) placements, bonds, shares, loans & advances etc.) and through lending to non-Cypriot residents or legal entities. In addition, the Group is indirectly affected by credit facilities provided to customers for their international operations or due to collateral in other countries.

In this respect, country risk is considered in the risk assessment of all exposures, both on-balance sheet and off-balance sheet.

Risk Reporting and measurement system for Country Risk

ALCO reviews the Country Risk exposures (for Treasury and Non-Treasury activities) as compared to limits on a quarterly basis and the Board, through its Risk Committee, reviews the Exposures and the Country limits at least annually. Country risk is monitored at the level of the below transactions and on an aggregate basis.

- Treasury transactions: relate to investments in bonds, MM placements, nostros, pledged amounts, derivatives, Repos, Reverse Repos and commercial transactions with banks;
- Lending: relates to loans given by the bank or through funding the operations of a branch/subsidiary. For loans where the borrower and guarantor reside in different countries, exposure counts against both countries;
- Commercial transactions with non-banks: relate to letters of credit, letters of guarantee or other similar products;
- Committed lines of credit;
- Properties owned by the Bank;
- Investments in branches/subsidiaries abroad: relate to the amounts invested, excluding goodwill, since this is deducted from the capital base.

The country limits are allocated based on the CET1 capital of the Group, the country's credit rating and internal scoring.

The internal scoring is based on the assessment of economic and political parameters specific to each country.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.1.3 Credit Risk with Correspondent Banks and Countries (continued)

In addition to the above, other factors are also taken into account before setting any limits, such as the:

- Strategy of the Group with respect of its international activities;
- Group's Risk Appetite;
- Perceived business opportunities in a country;
- The Group's capital base;
- The needs of the different units of the bank (e.g. Treasury, Business lines, Group Entities).

All limits are reviewed and approved at least annually. All policy documents relating to country and counterparty risk are approved by the BOD at least annually.

MLR monitors the Treasury country limits on a daily basis and the Non-Treasury country limits on a quarterly basis. Any breaches are reported following the escalation process described in the approved Framework.

3.2.1.4 Policies for Credit Risk Mitigation (CRM)

Credit Risk Mitigation is implemented through a number of policies and circulars /procedures such as:

Lending Policy

Lending policy sets the standards and effective guidelines to be used during the credit granting process and is aligned with the Bank's risk tolerance and approved limits. It includes customer, credit facility and collateral types, submission of financial and other customer information, assessment of financial and other information/repayment ability (e.g. purpose of credit facility/facility types, credit facility amount and duration, loan to value ratio, loan to cost ratio, housing loan ratio, repayment schedule, collaterals), review of existing facilities, restructured/forborne and non-performing exposures, leveraged transactions etc.

Concentration Risk Policy

This Policy defines the limits and the methodology for limit setting for exposures in specific Bank assets, liabilities and off-balance sheet items to ensure that concentration risk is within the Bank's Risk Appetite. It covers industry sector, name, country risk, collateral, product, shadow banking entity (SBE), leveraged transactions, capital repayment at maturity (CRAM) Loans, counterparty, funding sources, derivatives concentration and brokers limits concentration.

Valuation policy

This policy sets the guidelines on how collaterals obtained as security by the Bank are valued at origination and how such value is monitored and reviewed at regular intervals, to ensure:

- That they provide adequate coverage for the credit facilities granted by the Bank and provide an accurate picture of the value of collateral in case of enforceability, provisioning or capital calculations.
- Valuation risk is prevented and deterred and, where it does occur, it is addressed in a timely and expeditious manner.

Early Warning Policy

The Early Warning Policy sets the standards and effective guidelines on how the Bank should identify and manage early signs of distress, i.e., credit risk, and ensures relevant actions are performed in accordance with the regulatory and legal framework.

Credit Risk Monitoring policy

The Credit Risk Monitoring policy addresses the Bank's commitment to monitor the implementation of Credit Risk policies and procedures in collaboration with quality and efficiency. Various actions are performed by RMD to ensure the implementation of the policy and reports are produced presenting results of compliance. Monitoring actions and procedures and the resulting reports produced are described in the Credit Risk Monitoring policy.

Asset acquisition and disposal policy for Debt Settlement

This Policy sets out the guidelines and limits, for the acquisition of assets for debt settlement and for the disposal of assets that were acquired by the Bank for debt settlement.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.1.4 Policies for Credit Risk Mitigation (CRM) (continued)

Write-off policy

This policy sets out the guidelines, authorities, limits and governance for write-off process i.e., write-offs (contractual) and accounting write-offs (set-offs / non-contractual). Additionally, it ensures write-offs and accounting write-offs (set-offs) are performed in accordance with the regulatory framework.

Environmental and Social Policy

The Bank is committed to applying certain environmental and social policies and procedures to its lending activities based on specific criteria. This policy covers the Bank's responsibilities under this commitment.

Green Lending Policy

The purpose of the Bank's Green Lending Policy, which is based on the Green Loan Principles ("GLP"s), is to provide the framework for the procedures and the requirements the Bank will implement for the creation of "green" loan products and ultimately the development of a green loan portfolio.

3.2.1.5 Measurement and Assessment - Systems

The effective management of the Group's credit risk is achieved through a combination of training and specialisation as well as appropriate credit risk assessment systems. The Group aims to continuously upgrade its systems and models used in assessing the creditworthiness of Group customers.

Credit Scoring Systems

Retail (In-house Python solution)

The Bank maintains in-house credit scoring systems for new customers through Application Scorecards providing real time score. For existing customers, the Bank uses, amongst others, behavioural scoring which takes into account factors such as the conduct of existing accounts and whether the customer has been in arrears, has consumed their overdraft limits, etc.

Small Medium Enterprises (SMEs) and Corporates (Credit Rating Models – Moody's Credit Lens Risk Analyst)

Moody's Credit Lens Risk Analyst is a system used to set the basis for consistent and accurate credit risk analysis on commercial borrowers by collecting, analysing and storing financial statement and qualitative/judgmental data.

This credit scoring system calculates the following customer ratings/scores:

- *The financial index (based on Moody's Credit Lens Risk Analyst):* The assessment of the financial position of the customers is performed based on recent audited financial statements as well as management accounts, assessing performance with respect to operational efficiency, liquidity, debt service and capital structure. This index is used for assessing financial position/credit worthiness of business/corporate customers.
- *The borrower rating:* The assessment of the customers' credit worthiness is performed taking into account the financial index, the customer behaviour with the Bank, the management of the enterprise and sectorial risks, as well as the liquidity and capital structure of the business.

Shipping exposures - scorecards

The Bank has developed a customised scorecard for rating shipping exposures. The score that is produced is based on assessment of both the customer and the underlying object (vessel). Some of the drivers of the assessment are current fleet gearing, projected interest coverage, management experience, diversification outside of shipping for the customer and current brake even coverage, projected brake even coverage, geographic diversification, quality of security vessel for the project, etc.

Special Purpose Vehicle exposures

The Bank has developed a scorecard for rating special purpose vehicles. The scorecard is based on an expert judgement approach with the main drivers being financial ratios that indicate borrower's ability to repay, asset/transaction characteristics, strength of sponsor and security package such as the nature of lien etc.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.1.5 Measurement and Assessment - Systems (continued)

Project Finance exposures

The Bank also developed a project finance scorecard, also based on an expert judgment approach. The main drivers of the scorecard are the financial ratios that indicate borrower's ability to repay, asset/transaction characteristics and security package such as assignment of contracts and accounts, lender's control over cash flow etc.

3.2.2 Market Risk Management

Market Risk is defined as the current or prospective risk to earnings and capital arising from adverse movements in the prices of interest rate instruments, foreign exchange and from any other changes in market prices. The main types of market risk to which the Bank is exposed to, are listed below:

- Interest Rate Risk (IRR);
- FX risk;
- Securities price risk (bonds, equities);
- Properties Price risk.

Each of the risks is defined and further analysed in the subsections below.

3.2.2.1 Interest Rate Risk in the Banking Book & Credit Spread Risk in the Banking Book

Definition

Interest rate risk in the banking book ("IRRBB") refers to the current or prospective risk to both the earnings and capital of the Group which arise from adverse movements in interest rates. The four components of Interest rate risk are: repricing risk, yield curve risk, basis risk and option risk.

- Repricing risk arises from the timing mismatch in the repricing of assets, liabilities and off-balance sheet items.
- Yield curve risk arises from changes in the slope and the shape of the yield curve.
- Basis risk arises from the imperfect correlation between the different variable reference rates.
- Option risk arises from option positions, e.g. floor or cap on loan rates, or from embedded options, e.g. consumers redeeming fixed rate products when market rates change.

The Group does not operate any trading book and thus all interest rate exposure arises from the banking book.

Credit Spread Risk in the Banking Book (CSRBB) is driven by changes in the market price of credit risk, liquidity and potentially other characteristics of credit-risky instruments, not captured by any other risk such as IRRBB or expected credit default risk.

Limits

Limits are set as a percentage of Tier 1 capital and as a percentage of the Group net interest income (when positive) and relate to the change in Net Interest Income (NII) and Economic Value of Equity (EVE) based on internal and regulatory scenarios.

It is noted that all efforts take place to avoid limit breaches. Any breaches are reported following the escalation process depending on the limit breach.

Breaches, upon identification, are immediately reported to the relevant authority. Mitigating actions are taken unless ALCO recommends to the Risk Committee that it is not beneficial to proceed with hedging alternatives.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.2.1 Interest Rate Risk in the Banking Book & Credit Spread Risk in the Banking Book (continued)

Management

Treasury is responsible for managing the Interest Rate/Credit Spread exposure. Corrective actions and hedging strategies are taken by Treasury with a view of minimizing the risk exposure following relevant approvals.

Corrective actions relating to IRRBB include:

- on balance sheet solutions e.g. purchase of fixed rate assets, introduction of new customer accounts or loans with the desired characteristics, and
- the use of derivatives, e.g. interest rate swaps or interest rate options.

Monitoring

For internal management purposes and compliance with limits, the Group calculates on a monthly basis, the impact on NII and Economic Value (EV) for EUR and USD and combined impact under the various internally developed interest rate shock scenarios. It also calculates on a quarterly basis, the impact on NII and EV from changes in credit spreads based on internal scenarios and regulatory scenarios. The results are reported to the ALCO for information purposes. RC is also informed on the Bank's IRRBB/CSRBB mainly through the monitoring of the IRRBB/CSRBB RAS indicators.

The change in the economic value and NII resulting from the standard regulatory shocks of sudden +/-200 basis point shift of the yield curve is also calculated on a monthly basis. Any resulting decline in economic value or NII is compared to the internal and regulatory thresholds.

The Group also calculates on a quarterly basis, the impact on NII and EV for EUR and USD under the standardised interest rate shock scenarios as specified in Basel Committee on Banking Supervision. Δ NII and Δ EVE results are compared to internal and regulatory limits.

The impact on NII and EV under stress scenarios which are aligned to the ICAAP scenarios used for the calculation of the economic capital requirement is also calculated on a quarterly basis. Results are not compared to any limits but are used to quantify Interest Rate Risk for ICAAP purposes.

3.2.2.2 Currency Risk

Definition

Currency/FX risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in foreign currency exchange rates.

Limits

In order to limit the risk of loss from adverse fluctuations in exchange rates, overall Intraday and Overnight open currency position limits have been set. These limits are small compared to the maximum permissible by the CBC. Internal limits serve as a trigger to the management for avoiding regulatory limit breaches.

Even though there is no FX Trading Book, Value at Risk (VaR) is calculated on a quarterly basis on the position reported to CBC, for monitoring purposes.

2025	Intraday	Overnight
	€ million	€ million
Cyprus	20	20 (10 per currency)
Total	20	20 (10 per currency)
2024		
Cyprus	20	20 (10 per currency)
Total	20	20 (10 per currency)

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.2.2 Currency Risk (continued)

Management

The Treasury is responsible for managing the FX Open position of BOC PCL emanating from its balance sheet. The FX position emanating from customer transactions is managed by the Global Markets & Treasury Sales Department. Treasury also performs the hedging for the FX open positions of the foreign non-Banking units of the Group.

3.2.2.3 Equity Securities Price Risk

Definition

The risk of loss from changes in the price of equity securities arises when there is an unfavourable change in the prices of equity securities held by the Group as investments.

Management and Monitoring

Investments in equities are outside the Group's risk appetite but may be acquired in the context of delinquent loan workouts. The Group monitors the current portfolio mostly acquired by the Group as part of the acquisition of certain operations of Laiki Bank, or through delinquent loan workouts, with the objective to gradually liquidate all positions for which there is a market. Equity securities are disposed by the Group as soon as practicable.

Analysis of equity and fund holdings are reported to ALCO on a quarterly basis.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.2.3 Equity Securities Price Risk (continued)

The table below shows the impact on the profit/loss before tax and on equity of the Group from a change in the price of the equity securities held, as a result of reasonably possible changes in the relevant stock exchange indices.

	Change in index	Impact on profit/ loss before tax	Impact on equity

3.2.2.4 Debt Securities Price Risk

Definition

Debt securities price risk is the risk of loss as a result of adverse changes in the prices of debt securities held by the Group. Debt security prices change mainly as the credit risk of the issuers change and/or as the interest rates change mainly for fixed rate securities.

The Group invests a significant part of its liquid assets in highly rated debt securities. Changes in the prices of debt securities classified as investments at Fair value through Profit or Loss (FVPL), affect the profit or loss of the Group, whereas changes in the value of debt securities classified as Fair value through other comprehensive income (FVOCI) affect directly the equity of the Group. Changes in prices of securities held at amortised cost have no impact on P&L or equity.

Limits

Debt security investment limits exist at RAS level governing the level of riskiness of the overall portfolio. Credit limits per issuer as well as concentration limits are also in place. Limit monitoring is performed on a daily basis by the MLR. Any breaches are reported following an established escalation process by reference to the limit breach.

Management

The debt security portfolio is managed by Treasury Division and governed by the Bond Investment Policy. The annual bond investment strategy is proposed by Treasury and approved by ALCO and ultimately by the Board as part of the approval of the Group Financial Plan. Treasury proceeds with bond investment amounts in accordance with the approved strategy ensuring that the portfolio remains within the bond investment policy, limits and parameters set in the various policies and frameworks.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.2.4 Debt Securities Price Risk (continued)

Monitoring

MLR is primarily responsible for debt securities limit monitoring. Limit monitoring is performed on a daily basis. Any breaches are reported following the escalation process depending on the limit breach.

The table below indicates how the profit/loss before tax and equity of the Group will be affected from reasonably possible changes in the price of the debt securities held, based on Value at Risk.

2025	Impact on profit/ loss before tax	Impact on equity
	€ 000	€ 000
Up Scenario		
Aa3 and above rated bonds	3,522	2,684
A3 and above rated bonds	856	1,030
Baa1 and below rated bonds	1,026	1,099
Cyprus Government bonds (A3 rated)	678	10,204
Down Scenario

Other securities	-10	(383)	-
2024			
Other securities	+40	4,281	-
Other securities	-10	(1,070)	-

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.2.5 Property Price Risk

Definition

Property price risk is the risk that the value of property will decrease, either as a result of:

- Changes in the demand for, and prices of, Cypriot real estate; or
- Regulatory requests which may increase the capital requirement of stocks of properties

The Group is exposed to the risk of changes in the fair value of property, which is held either for own use or, as stock of property or as investment property. Stock of property is predominately acquired in exchange of debt and is intended to be disposed in line with the Group's strategy.

Management and Monitoring

The Group has in place a number of actions to manage and monitor the exposure to property risk as indicated below:

- It has set up and operates since 2016 a specialized division, REMU, that manages the repossessed portfolio, including other non-core assets, through appropriate real estate disposal strategies that are adjusted and updated based on market evidence, the remaining stock composition and historical trades and investor interest;
- It has placed great emphasis in the efficient and quick disposal of on-boarded properties and in the close monitoring and reporting. RAS indicators and other KPIs are in place monitoring REMU properties in terms of aging, value and sales levels;
- It assesses and quantifies property risk for ICAAP purposes under both the normative and economic perspective;
- It monitors the changes in the market value of the collateral and, where necessary, requests the pledging of additional collateral in accordance with the relevant agreement;
- As part of the Group's provisioning process, assumptions are made about the future changes in property values, as well as the timing for the realisation of collateral, taxes and expenses on the repossession and subsequent sale of the collateral as well as any other applicable haircuts;
- For the valuation of properties owned by the Group, judgement is exercised which takes into account all available reference points, such as comparable market data, expert valuation reports, current market conditions and application of appropriate illiquidity haircuts where relevant.

MLR is primarily responsible for monitoring REMU RAS limits. Limit monitoring is performed on a monthly basis. Any breaches are reported following the approved escalation process.

3.2.3 Liquidity Risk and Funding

Definition

Liquidity risk is the risk that the Group is unable to fully or promptly meet current and future payment obligations as and when they fall due. This risk includes the possibility that the Group may have to raise funding at high cost or sell assets at a discount to fully and promptly satisfy its obligations.

Funding risk is the risk that the Group does not have sufficiently stable sources of funding or access to sources of funding may not always be available at a reasonable cost and thus the Group may fail to meet its obligations, including regulatory obligations (e.g. MREL).

Governance and Oversight

Every year, with the completion and approval of ILAAP package, the Board signs the Liquidity Adequacy Statement (LAS) which is sent to the ECB as part of the annual ILAAP package. Last year's LAS states among others that 'The Bank has a sound Liquidity Risk Management Framework with a balanced Risk Appetite and Liquidity Risk Policy. Processes, methods, systems including Governance with lines of defence separation and controls are in place which enable the Bank to identify measure, manage and monitor liquidity risk. This ensures that the Bank maintains liquidity resources which are adequate to ensure its ability to meet obligations as they fall due under ordinary and stressed conditions'.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.3 Liquidity Risk and Funding (continued)

The Board ensures that senior management takes the steps necessary to monitor and control liquidity and funding risk and provides adequate reporting regarding liquidity and funding.

The Board of Directors, through its Risk Committee, approves the Liquidity Risk Policy, at least annually. Every month, the Market & Liquidity Risk submits the liquidity updates to the RC. While the Board has the ultimate responsibility for liquidity management, ALCO is appointed to ensure the timely and effective implementation of the liquidity policy.

The ALCO is responsible for setting the policies for the effective management and monitoring of liquidity across the Group.

The Treasury Division is responsible for liquidity management, to ensure compliance with internal policies and regulatory liquidity requirements and to provide direction as to the actions to be taken regarding liquidity needs.

Liquidity is also monitored by the Market & Liquidity Risk department, which is an independent department responsible to monitor compliance, with both internal policies and limits as well as requirements set by the regulatory authorities. The Market & Liquidity Risk department reports to ALCO and Board RC the liquidity position, at least monthly. It also provides the results of various stress tests to ALCO and the Board RC on a quarterly basis as part of the quarterly ILAAP review.

The Market & Liquidity Risk department runs liquidity stress test scenarios on a regular basis for bank specific, market wide and combined scenarios. The combined stress scenario is the longest and most severe liquidity scenario performed by the Bank. The requirement is to have sufficient liquidity buffer to survive a twelve-month stress period, including capacity to raise funding under all scenarios.

The designing of the stress tests follows best practices. The stress test assumptions are reviewed and approved by the Board at least annually.

As part of the Group's procedures for monitoring and managing liquidity risk, there is an approved Liquidity Contingency Plan (LCP) for handling liquidity difficulties. The LCP details the steps to be taken in the event that liquidity problems arise, which escalate to a special meeting of the Crisis Management committee for LCP (CMC-LCP). The LCP sets out the members of this committee and a series of possible actions that can be taken.

Limit breaches follow relevant defined escalation process.

Following the deleveraging of the Bank and the disposal of all its foreign units, the Group's main operations comprise the BOC banking unit. The rest of the other local units (the insurance companies, JCC and CISCO) are immaterial in size and they manage their liquidity independently.

Risk Reporting and measurement system

The Bank has an automated daily/monthly/quarterly reporting process for liquidity and funding in place. The system utilised covers for (a) internal reporting and stress testing and (b) regulatory reporting. The system is constantly enhanced to cover the increasingly demanding needs stemming from both internal and external requirements. This tool enables the Bank to increase efficiency and effectiveness of liquidity monitoring.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.4 Operational Risk Management (ORM)

3.2.4.1 Definition and Structure

Operational risk is defined as the risk of direct or indirect impact/loss resulting from inadequate or failed internal processes, people, and systems or from external events. This definition includes compliance and legal risk.

The Group uses a broader scope when defining operational risk (to include other important risks such as reputational risks), for the purposes of its ORM Framework. As such, operational risk encompasses the following risks (which are reflected in the Bank's Risk Taxonomy):

- Regulatory Compliance/Conduct Risk
- Financial Crime Risk
- Internal Fraud Risk
- External Fraud Risk
- People Risk
- Business Continuity Risk
- Information Security (Including Cyber) Risk
- Technology Risk
- Data Accuracy and Integrity Risk
- Statutory Reporting and Tax Risk
- Transaction Processing and Execution
- Project Risk
- Physical Security and Safety Risk
- Model Risk
- Legal Risk
- Third Party Risk
- Reputational Risk

Operational regulatory risk policies and procedures contribute to the management of these risks, some of which are also directly managed by specialised departments, i.e. Information Security Department and Group Compliance. The ORM Department is responsible for embedding explicit and robust ORM practices into all areas of the business process from the initial design of the Bank's business strategy to the sale of services and products to its customers.

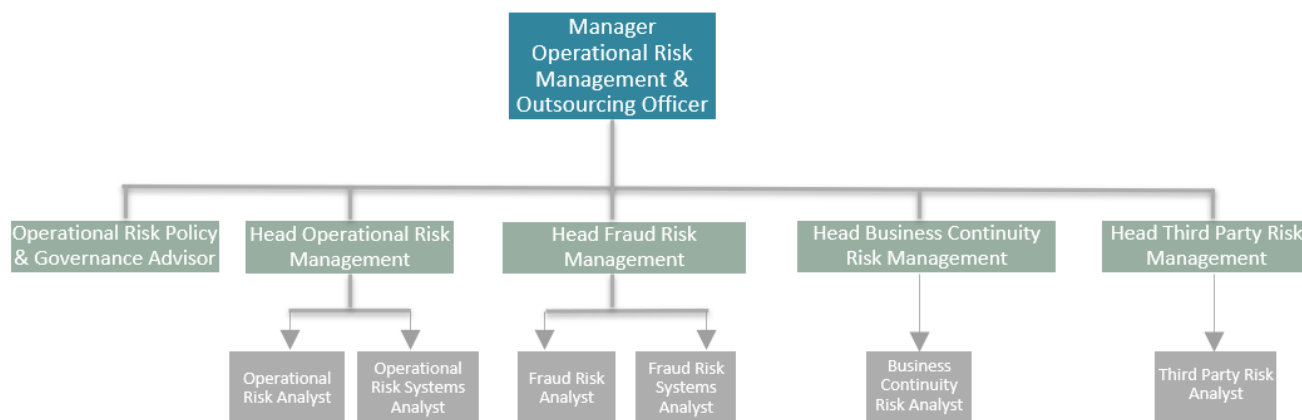

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.4.1 Definition and Structure (continued)

This is achieved by implementing a sound, coherent and comprehensive framework for the identification, assessment, monitoring and control of operational risk within the Bank (Section 3.2.4.2) that improves the service provided to customers, the Bank's productivity and cost effectiveness and which ultimately protects shareholder value. ORM also ensures that the level of operational risk faced by the Bank is consistent with the Board's overall risk appetite and corporate objectives.

ORM Structure

Operational Risk Management Unit

The Operational Risk Management unit is responsible -inter alia - for:

- Providing direction to the first line of defence through policy, education, tools and training;
- Developing and maintaining a framework and supporting policies for the management of operational risks, to ensure timely and effective identification, assessment, monitoring, control and mitigation of operational risks, as well as alignment with regulatory requirements;
- Exercising oversight and challenge to the process of identification and assessment of operational risk and the necessary follow-up for remedial actions, including the operational risk for new products, services, or implementation of new systems, or processes, and all Tier 1 / Tier 2 Projects.

Business Continuity Risk Management Unit

- The Business Continuity Risk Management unit is responsible to maintain a comprehensive Business Continuity Management & Disaster Recovery Policy and establish an automated System which follows best practices, the requirements of ISO standard ("ISO 22301 – Business Continuity Management"), Regulation (EU) 2022/2554 (DORA) and is in line with the Central Bank of Cyprus (CBC) directives.
- Business continuity risks are managed to ensure that the Group has business resiliency and Business Continuity Plans (BCPs) in place for all Business Units and is able to operate on an on-going basis and limit losses in the event of severe business disruption. In addition to the BCPs, the Business Continuity Management Framework includes an IT Disaster Recovery (DR) plan, an Incident Response & Escalation Process, a Crisis Management Plan, Incident Response Plans and Specialized Continuity Action Plans all of which are reviewed and tested.

Fraud Risk Management Unit

The Fraud Risk Management unit is responsible for:

- Oversighting and co-ordinating the Group's approach to Fraud Risk management;
- Developing and maintaining the framework, supporting policies and procedures for the management of internal and external fraud risks;
- Promoting and adopting automated fraud preventive systems and technology, data analytics tools and effective controls for the prevention and early detection of external and internal fraud;
- Establishing comprehensive Fraud Incident Response plan(s) across the Bank to ensure effective and timely management of external and internal fraud incidents;

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.4.1 Definition and Structure (continued)

- Performing Fraud Risk Assessments on business activities and processes for the timely identification and monitoring of fraud risks across Group;
- Ensuring that divisions and business departments have sound processes for identifying new and emerging fraud risks;
- Assessing new regulations or amendments with regards to fraud related issues and performing regulatory gap analysis in cooperation with Compliance division and other related stakeholders;
- Providing direction through policy, education, tools and training.

Third-Party Risk Management (TPRM) Unit

The TPRM unit is responsible for:

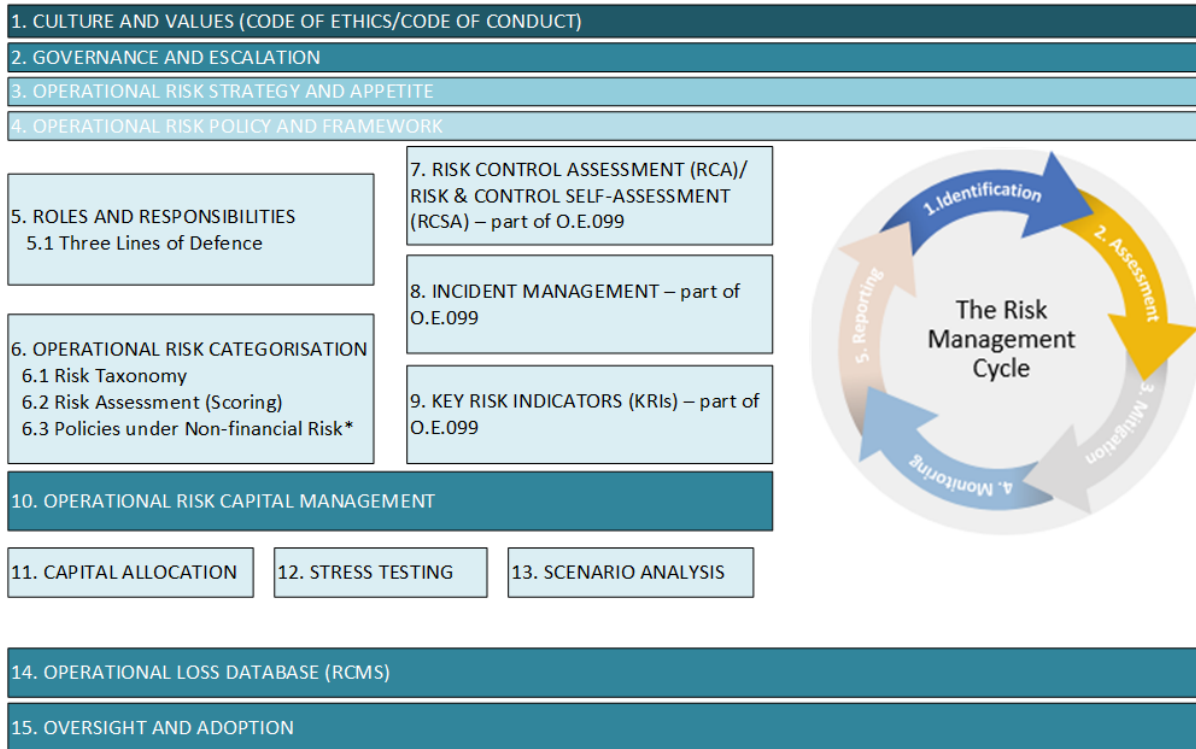

- Co-ordinating the Group's approach to Third-Party Risk management;
- Developing and maintaining the framework, supporting policies and procedures for the management of Third-Party risks;
- Assessing new regulations or amendments with regards to outsourcing and ICT related issues and performing regulatory gap analysis in cooperation with Compliance division and other related stakeholders;
- Assessing arrangements qualified as outsourcing, ICT or intragroup (based on the EBA Guidelines on outsourcing arrangements 2019, CBC's Directive to Credit Institutions on Governance and Management Arrangements 2021 and DORA);
- Performing risk assessments for all aforementioned types of arrangements of the Group, in coordination with the other control functions;
- Providing direction through policy, education, tools and training.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.4.2 Management and Control of Operational Risk

The following diagram summarises the ORM Framework and its components:

**Operational Risk Management Policy, Fraud Risk Management Policy, Business Continuity Management & Disaster Recovery Policy, Reputational Risk Management Policy, Third-party/Outsourcing Risk Management Policy, New Products/Services Policy. The Operational Risk Management Framework includes all other non-financial risks, which are overseen by the relevant control functions (including Compliance [Regulatory Compliance, Financial Crime Compliance, DPO], Information Security).*

The ORM framework addresses the following objectives:

- Fostering awareness and understanding of operational risk among all staff and promoting a culture where staff is more conscious of risks;
- Ensuring effective operational risk monitoring and reporting;
- Providing transparent reporting of operational risks and material exposure to losses, to the management and providing all stakeholders with updates on implementation of action plans as well as the risk profile of the Group;
- Promoting the implementation of a strong system of internal controls to ensure that operational incidents do not cause material damage to the Group’s franchise and have a minimal impact on the Group’s profitability and reputation;
- Improving productivity, efficiency and cost effectiveness, with an objective to improve customer service and protect shareholder value.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.4.2 Management and Control of Operational Risk (continued)

The Group conducts all its dealings with customers within high ethical standards and follows a very prudent and cautious strategy with regards to compensation or provision of incentives that could lead to risks of mis-selling. A thorough framework is in place for assessing all the relevant risks for new or changed products/services as a key control for minimising the risk of products or services being promoted to the customers that create the potential for unfair treatment or are otherwise not appropriate or relevant for certain customers. Additionally, the Group maintains a Customers Complaints Management process, the purpose of which is to provide the foundation for implementing a consistent, diligent, efficient, and impartial approach throughout the Group for the handling of customer complaints. The Group cultivates a culture where complainants are treated fairly and the complaints handling mechanism is perceived as a valuable opportunity to rebuild and enhance relationships with customers.

Risk Appetite

A defined Operational RAS is in place, which forms part of the Group's RAS. Thresholds are applied for conduct and other operational risk related losses.

Risk Control Self-Assessment (RCSA)

A RCSA methodology is established across the Group. It is a process that enables/empowers the business unit management and employees to: (i) identify the inherent and residual risks to the achievement of their objectives, (ii) assess and manage critical/high risk areas of the business processes, using a uniform Likelihood x Impact scale that forms a central point of reference within the ORM framework, (iii) self-evaluate the adequacy of controls and identify the lack of controls and (iv) develop and prioritize risk treatment action plans.

According to the RCSA methodology, business owners are requested to place emphasis on identifying risks that arise primarily from the risk areas under the Risk Taxonomy (as outlined under Section 3.2.4.1).

With primary input from the process of RCSA, ORMD maintains a detailed risk register for each Unit, which forms an important component of the ORM analysis and reporting. Updating/enriching the risk register in terms of existing and potential new risks identified and their mitigation is an on-going process, sourced from RCSAs as mentioned above, but also from other risk and control assessments (RCAs) performed, e.g. by the Information Security Department, Third-Party Risk Assessments, New Product/Services Risk Assessments, Data Protection Impact Assessments, etc.

Risk-based Business Process Management

Risk based Business Process Management involves the assessment of risks, the provision of opinions on the acceptability of the risks assessed and the recommendation of additional controls in relation to changes made in business processes, new products or services, outsourced activities and new projects/initiatives. ORMD actively participates in the evaluation of new or amended procedures/policies, Tier 1/2 projects, new technology systems and other important decisions or developments, with an objective to facilitate and carry out the identification and assessment of any operational risks.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.4.2 Management and Control of Operational Risk (continued)

Incident recording and analysis

Data on operational risk events (actual and potential losses, as well as near misses) is collected from all Group entities, with a threshold of €100 per actual/potential loss. An operational risk event is defined as any incident where through the failure or lack of a control, the Group could actually or potentially have incurred a loss. The definition includes circumstances whereby the Group could have incurred a loss, but in fact made a gain, as well as incidents resulting in potential reputational or regulatory impact.

The data collected is categorised and analysed to facilitate the management of operational risks and, where possible, to prevent future losses by implementing relevant mitigating actions. Emphasis is constantly placed on carrying out root-cause analysis of both operational risk incidents with a significant impact and repeated operational risk incidents which present worrying trends. In 2025, 287 loss events with gross loss equal to or greater than €1,000 were recorded including incidents of prior years (mostly legal cases) for which losses materialised in 2025, compared to 519 loss events in 2024.

Key Risk Indicators (KRIs)

A KRI is an operational or financial variable, which tracks the likelihood and/or impact of a particular operational risk. KRIs serve as a metric, which may be used to monitor the level of particular operational risks. KRIs are similar to, and often coincide with, KPIs and Key Control Indicators. KRIs are established from a pool of business data/indicators considered useful for the purpose of risk tracking. These indicators are used for the on-going monitoring of the Bank's operational risks, and mitigating actions are initiated in the case KRI limit violations are observed. Key observations from the KRIs are reported to top management and the RC.

Operational Risk Capital Requirements and ICAAP

Regulatory and economic capital requirements for operational risk are calculated using the Standardised Approach. Additional Pillar II Regulatory capital is calculated for operational risk on a scenario-based approach. Scenarios are built after taking into consideration the Key Risk Drivers, which are identified using a combination of methods and sources, through top-down and bottom-up approaches. Both approaches are complementary and are simultaneously used in order to identify all key risks the organization is faced with. The Key Risk identification process is reviewed every quarter as part of the ICAAP process and new risks identified are added, while others that become obsolete are removed. Risk scores are updated depending on changes to circumstances (e.g. added controls, changes in the regulatory environment, etc.). The Bank, following the EBA's methodology guidelines on stress-testing for Conduct and other operational risks, projects the P&L impact of losses arising from material and non-material conduct risks as well as other operational risks.

Network of ORM liaisons

Operational risk liaisons act as the point of contact with the aim to enable the effective implementation of the various operational risk methodologies across the Bank, by liaising with their departmental and unit management.

Training and awareness

Training is carried out throughout the Bank with the aim to promote risk culture and enhance awareness in relation to operational risks. As training and awareness regarding operational risk is one of the main objectives of the ORM Framework, on-going training sessions are established covering awareness on principles of Operational Risk, its management Framework and tools.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.4.3 Management of Litigation risk

The LSD has set in place processes and procedures to ensure the effective and prompt management of Legal Risk. These processes and procedures primarily include the following:

- Handling requests for legal advice from all Divisions;
- Handling litigation against the Bank and providing support to Group entities for the handling of litigation against them;
- On-going review and assessment of the legal framework and regulatory developments;
- Reviewing new products/advertisements/internal policies, circulars and manuals, engagement letters with external counterparties, agreements, etc.;
- Participation of the Chief Legal Officer in Bank's committees and various ad-hoc committees; and
- Frequent reporting on pending litigation and latest developments in a number of Board and management committees.

Software systems are in place both for the filing of legal advice requests from all Divisions, as well as for the monitoring of litigation against the Bank. The structure of the LSD in teams of lawyers enables the timely allocation and completion of work. External Legal counsel is engaged for the representation of the Group before legal forums, as well as, for obtaining legal advice on issues/areas of Law which are not within LSD's specialisation/expertise.

A framework for the engagement, monitoring and assessment of the performance of external legal counsel has also been put in place in order to ensure that the best possible service is received. The participation and reporting of legal risk by the Chief Legal Officer in a number of Board and Management committees and in particular of all pending litigation against the Group ensures that the Bank is kept informed and updated of the Group's exposure in this respect. Such committees and groups include the Provisions Committee, the Board, the Board Committees, the Regulatory Steering Group, the EXCO, the Settlement of Legal Cases Committee and any other ad hoc committees. Additionally, LSD reports all litigation on a monthly basis to Operational Risk and other management bodies. Reporting to Operational Risk is done via the interface of the Lawsuits system and ORM system (RCMS) which monitors litigations and is updated on an on-going basis.

Pending litigation, claims, regulatory and other matters

The Group in the ordinary course of business, is involved in various disputes and legal proceedings and is subject to enquiries and examinations, requests for information, audits, investigations and other proceedings by regulators, governmental and other public bodies, actual and threatened, relating to the suitability and adequacy of advice given to clients or the absence of advice, lending and pricing practices, selling and disclosure requirements, reporting and information security requirements and a variety of other matters. In addition, as a result of the deterioration of the Cypriot economy and banking sector in 2012 and the subsequent restructuring of BOC PCL in 2013 as a result of the bail-in Decrees, BOC PCL is subject to a number of proceedings that either precede or result from the events that occurred during the period of the bail-in Decrees.

The Group considers that none of these matters are material, either individually or in aggregate. Nevertheless, provisions have been made where: (a) there is a present obligation (legal or constructive) arising from past events, (b) the settlement of the obligation is expected to result in an outflow of resources embodying economic benefits, and (c) a reliable estimate of the amount of the obligation can be made.

Any provision recognised does not constitute an admission of wrongdoing or legal liability. While the outcome of these matters is inherently uncertain, management believes that, based on the information available to it, appropriate provisions have been made in respect of legal proceedings, regulatory and other matters as at 31 December 2025 and hence it is not believed that such matters, when concluded, will have a material impact upon the financial position of the Group.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.2.4.4 Major developments relating to ORM during 2025

The Group was closely monitoring the developments regarding the Russia-Ukraine war and tensions in the Middle East that continued throughout 2025, with several pathways for escalation into a broader regional war. In particular, ORM Function performed several risk assessments aiming to determine whether the Bank's operations are affected in terms of branch network or Third-Party dependencies, with no material findings. The Operational Resilience is one of the areas of focus for the Regulators in 2025. As such, the ORM, further strengthened the Group's operational and continuity readiness across multiple scenarios.

During the year, Operational Risk performed an increased number of assessments for new products/procedures. A number of RCMS system enhancements were designed, developed and deployed (e.g. further enhancements of workflows). The RCSAs for 2025 as per the annual plan were completed successfully. Operational Risk Management also developed the Control Testing Framework, introducing the testing of a number of controls identified in the RCSAs in 2026. Moreover, Operational Risk oversaw all Tier 1 and Tier 2 projects and handled in an effective and timely manner all incidents.

The Third-party Risk Management unit (under Operational Risk Management) has performed compliance assessment of all in-scope existing and new Outsourcing, Strategic and Intragroup contracts in accordance with EBA Guidelines, CBC outsourcing directive and DORA regulation, aiming to identify and effectively handle any potential gaps or weaknesses. 2025 was a pivotal year for Third Party Management (TPRM), driven by the introduction of the DORA Regulation, which became effective on 17 January 2025. TPRM incorporated the necessary enhancements required by the DORA regulation in Policy and Procedures to ensure compliance and successfully assessed all planned Outsourcing, Intragroup, and ICT contracts within 2025. Additionally, the TPRM made substantial enhancements to the Concentration Model used for the Third-Party Risk Assessment and expanded the model to include ICT Vendor exposure as well as Cloud providers, thereby strengthening the Bank's overall risk management strategy.

During 2025, the Fraud Risk Management unit enhanced its Digital Channels Fraud Monitoring systems functionality and capabilities with the implementation of correlation of events models for early detection and blocking of phishing fraud. Additionally, it applied automated controls for strengthened monitoring of manipulation fraud, optimised the real-time cards fraud detection rules and models, and strengthened customer fraud awareness via the introduction of "Fraud and Cybersecurity hub".

3.2.4.5 Reporting

Important operational risks identified and assessed through the various tools/methodologies of the ORM framework, are regularly reported to top management, as part of overall risk reporting. More specifically, the CRO reports on risk to the EXCO and the RC on a monthly basis, while annual risk reports are submitted to the Regulators. Ad-hoc reports are also submitted to top management, as needed. Dashboards with metrics against the Bank's defined risk appetite are also submitted on a monthly basis to EXCO and the Board Risk Committee (BRC) through the CRO.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.3 Governance Arrangements

3.3.1 Recruitment Policy

The Group recognises the benefits of having a diverse Board of Directors (Board) which includes and makes use of differences in skills, experience, background, nationalities and gender among the directors. When determining the optimum composition of the Board, consideration is given to balancing these differences and achieving the appropriate collective suitability to direct the Bank's activities and manage its risks.

The Nominations and Corporate Governance Committee (NCGC) is assigned the responsibility to regularly review the composition of the Board in order to identify, evaluate and select candidates whose skills will complement and add value to the collective knowledge and skills of the Board. Pursuant to this assessment the Committee then makes appropriate recommendations to the Board in accordance with the Group Board Nominations, Diversity and Succession Planning Policy and in line with the Group Policy on the Suitability of Members of the Management Body and Key Function Holders approved by the Board both of which are available online on the Bank's website.

The persons proposed for the appointment should have specialised skills and/or knowledge to enhance the collective knowledge of the Board and must be able to commit the necessary time and effort to fulfil their responsibilities. Prior to the appointment, the Company must obtain the approval of the ECB.

Each director nominee should be of a professional and educational background that enables him/her to have a general appreciation of the major issues facing banks. Such issues include corporate governance issues, regulatory obligations of a public issuer, human resources, remuneration issues, technology, climate related and environmental risks and strategic business planning. Specialised knowledge and experience in the application of internal control procedures and accounting issues are also required when considering members for appointment to the Audit Committee who must have significant, recent and relevant financial experience.

Factors considered by the NCGC in its review of potential candidates include:

- Specialised skills and/or knowledge in accounting, finance, banking, law, business administration, the assessment of the effectiveness of the institution's arrangements, the interpretation of the institution's financial information or related subject;
- Integrity, honesty and the ability to generate public confidence;
- Demonstrated sound business judgement;
- Knowledge of financial matters including understanding financial statements and financial ratios;
- Knowledge of and experience with financial institutions;
- Risk management experience;
- Reputation of the potential candidate;
- The competencies and skills that the Board considers each existing director to possess;
- Possible gaps in knowledge and skills identified by the latest review of the composition of the Board;
- Succession planning;
- The need to attain and maintain the targets set by the Board Nominations Diversity and Succession Planning Policy for achieving and maintaining gender diversity on the Board (published on the Group's website). The Board aimed in 2025 in achieving at least 40% of non-executive director positions or at least 33% of all board positions (executive and non-executive combined) held by the underrepresented sex.

The Board seeks to continually enhance its operations and conducts a formal effectiveness evaluation of the Board, Board Committees, and individual Board Directors. In addition to reviewing the Board's operations, composition and overall effectiveness, the evaluation reviews past performance with the aim of identifying possible opportunities for improvement, determines whether the Board and its Committees are collectively effective in discharging their responsibilities and, in the case of individual Directors, determines whether each individual Director contributes effectively to the collective suitability of the Board.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.3.1 Recruitment Policy (continued)

As of 31 December 2025, the Board is comprised of eleven members: the Group Chair, Mr Efstratios (Takis) Arapoglou, who was independent on appointment and remains independent, two executive directors (Mr Panicos Nicolaou and Ms Eliza Livadiotou) and eight non-executive directors (Ms Lyn Grobler, Mr Adrian J. Lewis, Ms Monique Hemerijck, Mr Christian Hansmeyer, Mr Stuart Birrell, Ms Irene Psalti, Dr Georgios Syrichas and Dr Andreas Kritiotis). In accordance with the provisions of the CBC Directive on Suitability, as at 31 December 2025 all of the non-executive directors were independent. The names and brief biographical details including each director's background, external directorships, and whether these are executive or non-executive, experience and independent status are set out in Appendix I of this Report.

Both on an individual and a collective basis, the directors are considered to have the range of skills, understanding, experience and expertise necessary to ensure the effective leadership of the Group and that high corporate governance standards are maintained.

The NCGC ensures a formal, rigorous, and transparent procedure when considering candidates for appointment to the Board and maintains continuous oversight of the Board's composition to ensure it remains appropriate and has regard for its purpose, culture, major business lines, risk profile and governance requirements.

The NCGC reviews, at least annually, the structure, size, and composition of the Board (including skills, knowledge, experience, independence, and diversity), and recommends to the Board the skills and experience required to provide sound governance oversight. These include experience in banking, insurance, markets and regulatory environments, risk management, financial management, strategy development, technology as well as cybersecurity and operations experience and knowledge of law, governance, compliance, audit and ESG. Assessing the skills profile of the Board ensures that the Board and committees comprise of members having an all-embracing perception of the Group's activities and the risks associated with them. The composition of the Board remains under continuous review and the NCGC maintains a constant focus on succession planning to ensure the continuation of a strong and diverse Board, which is appropriate to the Group's purpose and the industry within which it operates.

The NCGC adheres to the requirements of the Group Policy on the Suitability of members of the management body and key function holders, which is fully aligned with the CBC Directive on Suitability (and the Joint European Securities and Markets Authority (ESMA) and EBA guidelines on the assessment of the suitability of members of the management body ('Joint Guidelines on Suitability')) and ensures a robust assessment of potential candidates which includes an interview by the NCGC and recommendation to the Board prior to the submission of suitability applications to the regulator for consideration.

In accordance with the Board Nominations, Diversity and Succession Planning Policy, the assessment and due diligence process is extensive and includes self-certification confirmations of probity and financial soundness as well as external checks involving a review of various publicly available sources. All potential candidates are assessed to ensure they have the ability to act with integrity, lead by example and promote the desired culture, which evidences a commitment to high standards and values. The process also involves the NCGC satisfying itself as to the candidate's ability to devote sufficient time to the role, his/her independence and suitability.

At the same time, the NCGC assesses and documents its consideration of possible conflict of interest. Finally, an assessment of collective suitability is performed following which the NCGC makes recommendations to the Board, according to the provisions of the Joint Guidelines on Suitability.

Regulatory assessment and formal approval are required and given for all Board appointments.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.3.2 Other Directorships

The NCGC ensures that individual Board directors have sufficient time to dedicate to their duties, having regard to applicable regulatory limits on the number of directorships which may be held by any individual director. The Board has determined the time commitment expected of non-executive directors to be 35-42 days per annum. Time devoted to the Group can be considerably more when serving on Board committees.

The NCGC considers whether a potential director is able to devote the requisite time and attention to the Bank's affairs, prior to the Board's approval of the individual's appointment.

BOC PCL has been classified as a 'significant institution' under the European Union (Capital Requirements) Regulation 2014. The CBC Directive on Suitability, which incorporates the provisions of Article 91 of the European Capital Requirements Directive ('CRD IV') on management bodies of credit institutions, determines that a director cannot hold more than one of the following combinations:

- One executive directorship with two non-executive directorships; or
- Four non-executive directorships.

For the purposes of the above, executive or non-executive directorships held within the same group shall count as a single directorship. Directorships in organisations which do not pursue predominantly commercial objectives do not count for the purposes of the above guidelines.

According to the CBC Directive mentioned above, the CBC may, in exceptional cases and taking into consideration the nature and complexity of the business of the Group, authorise members of the Board to hold one additional directorship.

The number of outside directorships held by the members of the Board is as follows:

- Mr Efstratios-Georgios Arapoglou 3 Non-Executive directorships
- Ms Lyn Grobler 1 Non-Executive directorship
- Ms Monique Eugenie Hemerijck 2 Non-Executive directorship
- Mr Adrian John Lewis 1 Non-Executive directorship
- Mr Christian Philip Hansmeyer 1 Non-Executive directorship
- Mr William Stuart Birrell 1 Executive directorship
- Ms Irene Psalti no outside directorships
- Dr Georgios Syrichas 1 Non-Executive directorship
- Dr Andreas Kritiotis no outsider directorships

Entities which do not pursue predominantly commercial objectives are excluded.

The biographies of the directors, including experience and knowledge, are presented in Appendix I and can be accessed on our website online and in the Annual Corporate Governance Report which is included in the Annual Financial Report and is available at www.bankofcyprus.com/en-gb/group/who-we-are.

3.3.3 Diversity

The Group recognises the benefits of having a diverse Board and workforce, creating a work environment where everyone has an opportunity to fully participate in creating business success, and where each person is valued for their distinctive skills, experiences, and perspectives. In reviewing Board composition and identifying suitable candidates, the NCGC considers the benefits of all aspects of diversity including the skills identified as relevant to the business of the Group, industry experience, nationality, gender, age and other relevant qualities, in order to maintain an appropriate range and balance of skills, experience and background on the Board.

All Board appointments are made on merit, in the context of the skills, experience, independence and knowledge which the Board as a whole is required to have to be effective and the diversity benefits each candidate can bring to the overall board composition.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.3.3 Diversity (continued)

The Group’s approach to Board diversity is set out in full in the Board Nominations, Diversity and Succession Planning Policy, which can be found online. The Board Nominations, Diversity and Succession Planning Policy recognises that a truly diverse Board will include and make good use of the differences in skills, experience, background, race, gender and other distinctions brought by each director, with such differences being considered in determining the optimum composition of the Board.

Non-executive members of the Board possess a wide range of skills, knowledge and extensive experience acquired from executive and/or non-executive appointments as directors of other companies, that combine to provide independent perspective, insights and challenge needed to support good decision-making and effective board dynamics. The effectiveness of the Board depends on ensuring the right balance of directors with banking or financial services experience and broader commercial experience. Directors bring their individual knowledge, skills, and experience to bear in discussions on the major challenges facing the Group. The participation of executives on the Board enhances the banking expertise of the Board and ensures that the Board is provided with direct, precise, and up-to-date information about significant issues concerning the Group.

During 2025, the NCGC reviewed the Board Nominations, Diversity and Succession Planning Policy, which aims to maintain diversity with appointments based on merit in the context of the skills and experience required. The quantitative gender diversity of BOCH for 2025 was set at least 40% of non-executive director positions or at least 33% of all board positions (executive and non-executive combined) held by the underrepresented sex. BOCH has been implementing an action plan approved by the NCGC describing all key intervening milestones leading to the accomplishment of this target. The changes in the composition of the Board in 2025 changed the diversity at 36.4% as at 31 December 2025. The Board remains committed to maintaining its set target.

The Board also places high emphasis on ensuring the development of diversity in the senior management roles within the Group. A number of Group policies ensure unbiased career progression opportunities. The Code of Conduct similarly ensures equal opportunities to all members of staff and treats diversity with fairness and respect aiming to provide fair treatment for everyone at work. A primary ESG target approved under the ESG strategy by the Board is $\geq 30\%$ women in Group’s management bodies by 2030.

As of 31 December 2025, there is a 28.6% representation of women in Group’s management bodies (defined as the EXCO) and a 48% representation of women at key positions such as Managers, Heads, Leads, Team Heads (defined as the wider Group Management).

As per the required Financial Conduct Authority (FCA) Diversity disclosures, the following is applicable in relation to the Bank as at 31 December 2025:

- 36.4% of the members of the Board are women.
- The Executive Director Finance, Eliza Livadiotou is female.
- The Board recognises the challenges in setting diversity targets. Cyprus is the geographical provenance of the Group’s customer and employee base and having also regards to the ethnic background of Cyprus population, at this time, the Board has not set a target for having at least one member of the Board from a non-white ethnic minority background. Notwithstanding this, when considering Board appointments, the Board will have regard to the requirements under the UK FCA Listing Rules.

	Number of Board members	Percentage of the Board	Number of senior positions on the board (CEO, CFO*, SID, and Chair)	Number in EXCO	Percentage of EXCO	Number in wider Group Management	Percentage in wider Group Management
Men	7	63.6%	3	5	71.4%	269	52%
Women	4	36.4%	1	2	28.6%	253	48%

*For CFO position the “EDF” title is used as the position encompasses further responsibilities

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

3.3.4 Board Risk Committee (RC)

The RC purpose and responsibilities

The Board of Directors, through the BRC, is responsible to ensure that a coherent and comprehensive Risk Management Framework for the identification, assessment, monitoring and controlling of all risks is in place. The framework ensures that material and emerging risks are identified, including, but not limited to, risks that might threaten the Group's business model, future performance, liquidity, and solvency. Such risks are taken into consideration in defining the Group's overall business strategy ensuring alignment with the Group's risk appetite.

The BRC reviews and proposes to the Board on an annual basis, or more frequently, if necessary, the Bank's risk appetite for approval, and ensures that the Bank's risk appetite is clearly communicated throughout the Bank and forms the basis on which risk policies and risk limits are established at group, business and/or sector level. It also reviews all risk management frameworks, methodologies and policies for identifying, measuring, evaluating, monitoring, reporting and mitigating risks, including frameworks, methodologies and policies related credit risk, market risk, asset and liability management, operational risk and compliance, as well as other risks such as reputational risk, strategic, conduct, legal risk, cyber risk, ICT risks, and risks arising from ESG and proposes their endorsement to the Board of Directors.

The BRC reviews reports and evaluates the overall risk exposure of the Bank and the Group on a regular basis, taking into account the approved risk appetite and the business plan of the Group, to review proposals and recommend corrective actions to the Board where there is a breach in the Risk Appetite of the Bank. Certain topics related to areas of responsibility of the Committee shall also be discussed at the Board of Directors level.

The BRC convenes regularly and on an ad hoc basis whenever the Committee Chair deems fit. During 2025, the Board Risk Committee convened thirteen times (the number does not include meetings that were held jointly with any other Board Committee). In the context of its responsibilities and during the year, key workings of the Committee included:

- Review Risk Appetite Framework with additions among others in the area of Climate and Environment (C&E), Risk Appetite Statement, Risk Profile Report, Emerging Risks Report, Risk Culture Dashboard;
- Ongoing-monthly updates on Risk Management issues and ad hoc briefings on developments;
- Review of Operational Risk KRI Dashboard, Risk & Control Self-Assessment (RCSA) process, Specialised Fraud Assessment and BCP reviews and Test Plan for the year;
- Review and updates of ICAAP/ILAAP exercise including assumptions, stress scenarios and reverse stress scenarios;
- Review of Annual Regulatory reports and disclosures (Annual Risk Management Report, Risk Management Division Declaration of Independence, Annual Operational Risk Report);
- Review and approval of policies and Terms of Reference that fall under its responsibilities;
- Regular updates on asset quality and main credit risk areas of the Group (Credit Quality Dashboard, Asset Quality Target Setting, Credit exposures greater than €100 million and proposed strategies to reduce, increase or maintain);
- Review of Credit Applications recommended/approved by Credit Committee 3 or ADC;
- Review of Credit Provisions for all quarters (jointly with the AC Committee);
- Review and challenge the Bond Investment Strategy, Market and Country and Counterparty limits;
- Review of Contingency Funding Plan governance, NII hedging Strategy;
- Review/Deep dive;
- Update on the Group's outsourcing arrangements and their compliance status;
- Review and regular updates of Information Security reports;
- Review KRIs and optimise RAS thresholds;
- Follow-up of SREP, onsite inspections and regular Regulatory updates;
- Performance of Appraisal of the Chief Risk Officer and the Information Security Manager.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

3.3.4 Board Risk Committee (RC) (continued)

The appointment and removal of the CRO and the Chief Information Security Officer are recommended by the RC and approved by the Board.

3.3.5 Reporting and Control

On an annual basis, the Chairman of the Risk Committee specifies both the information required by the Committee to discharge its duties and the calendar of the meetings. The agenda includes, among others, several regular topics described below:

- Risk appetite framework and risk appetite dashboard
- Financial plan risk assessment
- ICAAP and ILAAP
- Updates on all main risks faced by the Bank
- Credit portfolio overview
- Loan loss provisions
- Stress test results
- Risk quantification
- Regulatory communication
- Information security
- Updates on specific segment of the portfolio such as shipping, syndicated lending, real estate portfolio.

Further to the above topics, there are other, supplementary and ad-hoc reports that are brought to the Committees attention. Reports are generally presented by the CRO, other executives or managers of Risk Management Departments.

In addition to the Risk Committee, reports relating to the above topics are also discussed at EXCO and Board.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

4. Scope of Application

Differences on the basis of consolidation for financial reporting and prudential purposes

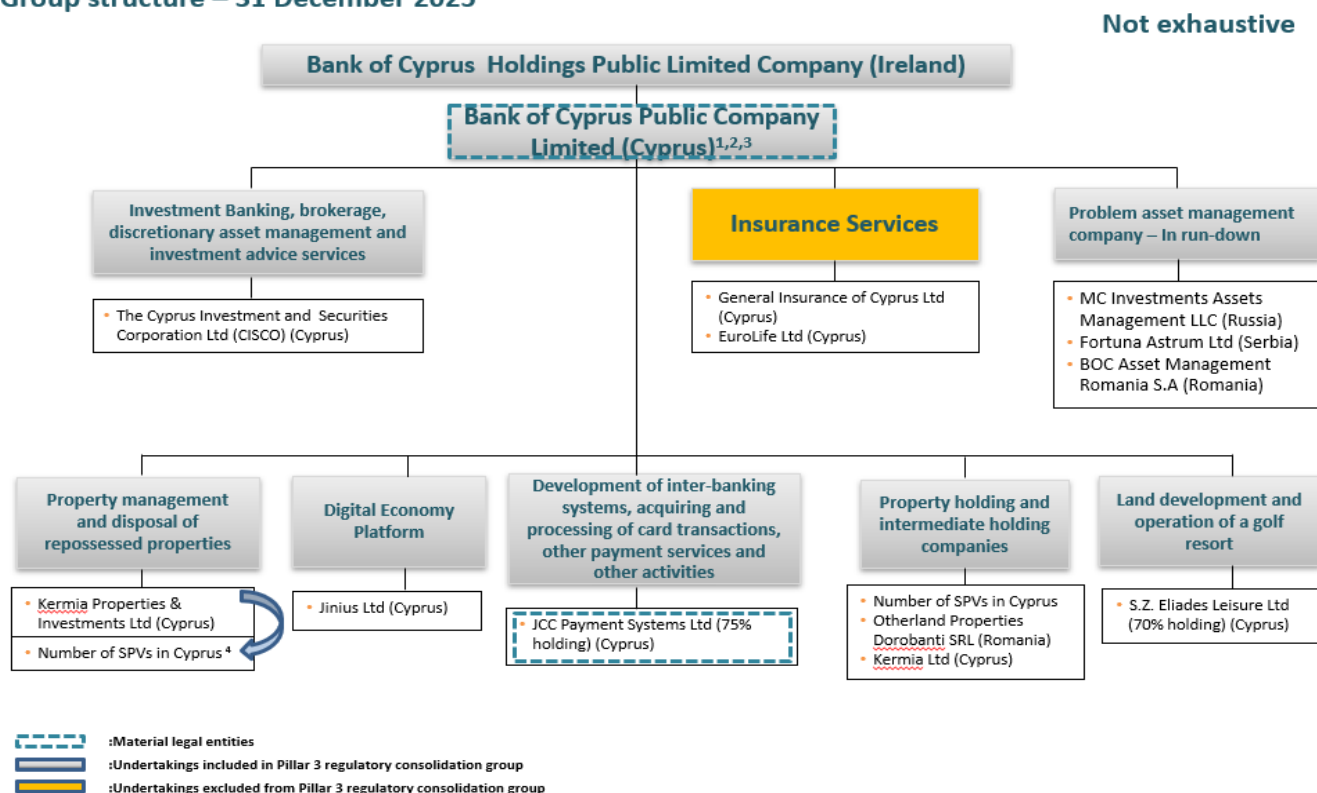

The data included in this Report may be different than the respective data of the Consolidated Financial Statements of the Company for 2025, which are prepared in line with IFRS, as adopted by the EU, mainly due to differences between the prudential consolidation basis and the accounting consolidation basis and/or differences in the definitions used. The reconciliation between the balance sheet presented in the Consolidated Financial Statements of the Company for 2025 and the balance sheet prepared for prudential purposes is disclosed in this section.

The Consolidated Financial Statements have been prepared on a historical cost basis, except for properties held for own use and investment properties, investments at FVOCI, financial assets (including, where applicable, loans and advances to customers and investments) at FVPL and derivative financial assets and derivative financial liabilities that have been measured at fair value, insurance and reinsurance contract assets and liabilities measured at their fulfilment values in accordance with IFRS 17, non-current assets held for sale measured at fair value less costs to sell and stock of property measured at net realisable value where this is lower than cost. The carrying values of recognised assets and liabilities that are hedged items in fair value hedges, and otherwise carried at cost, are adjusted to record changes in fair value attributable to the risks that are being hedged.

The Consolidated Financial Statements have been prepared in accordance with the IFRSs as adopted by the European Union (EU) and with those parts of the Companies Act 2014 applicable to companies reporting under IFRSs. The basis of consolidation for prudential purposes includes only those entities which form the basis for the calculation of regulatory capital requirements.

The chart below summarises the Group's structure on the basis of consolidated accounting and prudential purposes.

Group structure – 31 December 2025

¹ Activities of Bank of Cyprus Public Company Limited include mainly the provision of banking and financial services in Cyprus.

² All subsidiaries mentioned above are 100% unless otherwise stated.

³ Full list of the subsidiaries is disclosed in Appendix II

⁴ Indirect shareholding in subsidiaries through Kermia Properties & Investments Ltd

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

4. Scope of Application (continued)

The basis of consolidation of all Group entities for accounting and prudential purposes is presented in Appendix II.

As shown in table EU LI3 (Appendix II), as at 31 December 2025, the following subsidiaries were not included in the regulatory consolidation: EuroLife Ltd, General Insurance of Cyprus Ltd, BOC Secretarial Company Ltd, Ledra Estate Ltd, Laiki Bank (Nominees) Ltd, Nelcon Transport Co. Ltd, Kyprou Properties SA, Kyprou Asfalistiki (branch of General Insurance of Cyprus Ltd) and Kyprou Zois (branch of EuroLife Ltd). For none of these subsidiaries the actual own funds as at 31 December 2025, where applicable, were less than those required.

Material legal entities

The analysis is intended to show which legal entities within the Group contribute significantly to the asset, financial and earnings situation, or to provide or support critical functions and/or essential business activities.

A group company is classified as material in the following cases:

- if at least one of the following quantitative criteria is met or
- if at least the first of the following qualitative criteria is met.

Quantitative criteria:

- Contribution to the RWAs of the Group greater than 5%
- Contribution to Group revenues greater than 5%
- Contribution to the Total Assets of the Group greater than 5%

Qualitative criteria:

- Provision of a critical function or core business line
- Provide a service or support function to maintain a critical function or core business line.

Based on EBA Technical advice on critical functions and core business lines (EBA/Op/2015/05) and the Commission Delegated Regulation (CDR) 2016/778, 'Function' indicates a structured set of activities, services or operations that are delivered by an institution or group to third parties. Critical functions mean activities, services or operations the discontinuance of which is likely to lead to the disruption of services that are essential to the real economy or to disrupt financial stability due to the size, market share, external and internal interconnectedness, complexity and cross-border activities of an institution or group, with particular regard to the substitutability of those activities, services or operations.

According to the EU Commission Delegated Regulation (2016) on CFs, a function shall be considered critical, when it meets both of the following criteria:

- The function is provided by an institution to third parties not affiliated to the institution or group and
- The sudden disruption to provide that function would likely have a material negative impact on the third parties, give rise to contagion or undermine the general confidence of market participants due to the systemic relevance of the function for the third parties and the systemic relevance of the institution or group in providing the function.

This requires that the function cannot be substituted on acceptable terms within a reasonable timeframe, which would exclude such an impact of the failure.

The results of the materiality analysis of the legal entities for 31 December 2025 are presented in Appendix IV. The fulfilled criteria are highlighted in each case for the legal entities identified as material. Based on the qualitative and quantitative criteria, the Bank and JCC Payment Systems Ltd have been identified as material legal entities as at 31 December 2025.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

4.1.1 EU LI1 - Differences between the accounting scope and the scope of prudential consolidation and mapping of financial statement categories with regulatory risk categories

The difference between the carrying values reported in the Consolidated Financial Statements of the Company for 2025 and the carrying values under the scope of regulatory consolidation is due to the different basis of consolidation for prudential purposes. The basis of consolidation for prudential purposes includes only those entities which form the basis for the calculation of the regulatory capital requirements. A summary of the Group's structure on the basis of consolidation for the prudential purposes and the basis for consolidated accounting is presented in Section 4 'Differences on the basis of consolidation for financial reporting and prudential purposes'. Also, reconciliation between the Balance Sheet presented in Consolidated Financial Statements of the Company for 2025 and the Balance Sheet for regulatory purposes is presented in Section 4.1. The shift in the exposures under each framework between 2025 and 2024 is in line with the changes in column (b).

The table illustrates the balance sheet items as they are applied in the RWA and capital requirements calculation whereby the amounts included in column (b), the carrying values under the scope of regulatory consolidation are analysed into the framework they are subject to in calculating the RWAs through CRR, columns (c) to (g).

Pillar 3 Disclosures 2025

4.1.2 Main sources of differences between regulatory exposure amounts and carrying values in the Financial Statements

The table presents the main sources of differences between the carrying values under the scope of regulatory consolidation and the exposure amounts that are used to calculate the RWA under each regulatory framework of the CRR.

Row 5, "Differences in valuations", refers to additional valuation adjustments following regulatory supervisory recommendations.

Row 6, "Differences due to netting rules", presents the impact of the application of netting agreements under the SA-CCR approach in calculating RWA for derivatives and Securities Financing Transactions (SFTs).

Row 7, "Differences due to consideration of provisions", refers to transitional arrangement adjustments described in Section 5.1.

Row 8, "Differences due to the use of credit mitigation techniques", presents financial collateral amounts that are used in decreasing the exposures values for RWA calculation purposes under the Financial Collateral Comprehensive Method.

Row 9, "Differences due to credit conversion factors", presents the adjustment on the off-balance sheet items presented in row 4 converting them to credit equivalents.

Row 11, "Other differences", presents the balance sheet items that due to their nature either do not participate in the RWA and capital requirements calculations.

There are material shifts between 2025 and 2024 other than the shifts in the carrying values under the scope of regulatory consolidation analysed in Section 4.1.1 above. The difference between the regulatory exposure amounts and the carrying values under the prudential scope of consolidation for the years 2025 and 2024 is driven by the same factors.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

5.1 CRD Regulatory Capital (continued)

EU CC1 - Composition of regulatory own funds

Notes:

1. Amounts and ratios include profits for the year ended 31 December 2025 net of a deduction for a distribution in respect of 2025 earnings, following relevant recommendation by the Board of Directors to the shareholders for a final cash dividend of €218 million and approval by the Board of Directors, as disclosed in subsection 'Distributions' of Section 5.1 CRD Regulatory Capital. Group's adjusted recurring profitability is defined as the Group's profit after tax before non-recurring items (attributable to the owners of the Company) taking into account distributions under other equity instruments, such as the AT1 coupon.
2. Amounts and ratios include profits for the year ended 31 December 2024 net of deduction for a distribution in respect of 2024 earnings of €241 million, following relevant recommendation by the Board of Directors to the shareholders for a final cash dividend of €211 million and approval by the Board of Directors to undertake a share buyback of ordinary shares of the Company for an aggregate consideration of up to €30 million and in compliance with the terms of the ECB approval.
3. No restrictions apply on the items listed above for the purpose of the calculation of own funds in accordance with the CRR. It should be noted that on the basis of Article 26(i) of the CRR and the EBA guidelines on prudent valuations, a part of the fixed assets revaluation reserve (31 December 2025: c.€33 million, 31 December 2024: c.€33 million) is not allowed to be included in CET1 capital.
4. The amount reported in line 7, in addition to Additional Value Adjustments includes prudential charges relating to specific credits.
5. As at 31 December 2025 an amount of c.€16 million was not deducted from CET1 capital as a result of the revised rules of CRR II on the prudential treatment of software assets (31 December 2024: c.€15 million).
6. The amount in the balance sheet includes balance representing subordinated debt that does not qualify as Tier 2 (T2) capital.
7. The corresponding reference in the balance sheet also includes holdings which are not CET1 instruments of financial sector entities where the institution has a significant investment in those entities (amount below 17.65% thresholds and net of eligible short positions) and does not include holdings which are CET1 instruments of financial sector entities where the institution has a significant investment in those entities (amount below 17.65% thresholds and net of eligible short positions) but are not part of the group undertakings.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

5.1 CRD Regulatory Capital (continued)

The primary objective of the Group's capital management is to ensure compliance with the relevant regulatory capital requirements and to maintain healthy capital adequacy ratios to cover the risks of its business, support its strategy and maximise shareholders' value.

The capital adequacy framework, as in force, is implemented through the Capital Requirements Regulation (CRR) and Capital Requirements Directive (CRD). CRR establishes the prudential requirements for capital, liquidity and leverage for credit institutions. It is directly applicable in all EU member states. CRD governs access to deposit taking activities and internal governance arrangements including remuneration, board composition and transparency. Unlike the CRR, member states were required to transpose the CRD into national law and national regulators were allowed to impose additional capital buffer requirements.

On 27 June 2019, the revised rules on capital and liquidity (Regulation (EU) 2019/876 (CRD V) and Directive (EU) 2019/878) came into force. As an amending regulation, the existing provisions of CRR apply, unless they are amended by CRR II. Certain provisions took immediate effect (primarily relating to MREL), but most changes became effective as of June 2021. The key changes introduced consist of, among others, implementation of the new counterparty credit risk approaches, changes in the calculation of RWA for investments in collective investment undertakings (CIUs), changes to qualifying criteria for CET1, AT1 and T2 instruments, introduction of requirements for MREL and a binding Leverage Ratio requirement (as defined in the CRR) and a Net Stable Funding Ratio (NSFR).

The main provisions of Regulation (EU) 2020/873 that had an impact on the Group's capital ratio relate to the acceleration of the implementation of the new SME discount factor (lower RWAs), extending the IFRS 9 transitional arrangements and introducing further relief measures to CET1 allowing to fully add back to CET1 any increase in ECL recognised in 2020 and 2021 for non-credit impaired financial assets and phasing-in this starting from 2022 (phasing-in at 25% in 2022, 50% in 2023 and 75% in 2024) and advancing the application of prudential treatment of software assets as amended by CRR II (which came into force in December 2020).

During 2024, the EU co-legislators finalized, adopted and published the comprehensive package of reforms with respect to European Union banking rules which implement the Final Basel III set of global reforms, changing how banks calculate their RWAs (Regulation (EU) 2024/1623 (known as CRR III)) and Directive (EU) 2024/1619 (known as CRD VI), applicable from 1 January 2025, with Regulation (EU) 2024/1623 amending the CRR as regards requirements for credit risk, credit valuation adjustment risk, operational risk, market risk and the output floor and Directive (EU) 2024/1619 amending Directive 2013/36/EU as regards supervisory powers, sanctions, third-country branches, and environmental, social and governance risks. Most provisions of the CRR III have become effective on 1 January 2025, with certain measures subject to transitional arrangements or to be phased-in over time

The date of the application of the Fundamental Review of the Trading Book ('FRTB') framework has been postponed to 1 January 2026, in accordance with Commission delegated regulation 2024/2795. On 12 June 2025, the European Commission confirmed that the start date for the new market risk rules under the FRTB will be postponed by one additional year to 1 January 2027.

During the year ended 31 December 2025, the regulatory CET1 ratio was mainly affected by pre-provision income, provisions and impairments, the payment of AT1 coupon, other movements and the decrease in risk-weighted assets primarily as a result of the implementation of CRR III. The implementation of CRR III had a positive impact of approximately 1% on the CET1 ratio (transitional) of the Group on initial application on 1 January 2025, primarily driven by a reduction in Operational Risk RWAs and to a lesser extent by a reduction in Credit Risk RWAs. The CET1 ratio is also impacted by the deductions for distribution in respect of 2025 earnings and charges in line with the applicable framework.

As a result of the above, the CET1 ratio has increased by 180 bps during the year.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

5.1 CRD Regulatory Capital (continued)

Prudential filters and deductions

Prudential filters

The Group capital, in accordance with CRR Article 34 is subject to the prudential filter of additional value adjustments for assets measured at fair value. These adjustments are deductible from CET1 capital. As such, Additional Valuation Adjustments (AVA) relating to assets and liabilities measured at fair value are deducted from CET1 capital in accordance with the Commission Delegated Regulation (EU) 2016/101. Under the Commission Delegated Regulation (EU) 2016/101, the Group satisfies the conditions for using the simplified approach. The AVA deduction for 2025 and 2024 is reported within the Additional Value Adjustments line 7 in the tables above.

For the year ended 31 December 2025 and the year ended 31 December 2024 the Group deducted from CET1 prudential charges relating to specific credits. The deduction amounted to c.€69 million as at 31 December 2025 and to c.€46 million as at 31 December 2024. The Group is subject to increased capital requirements in relation to its real estate repossessed portfolio which follow a SREP provision to ensure minimum capital levels retained on long-term holdings of real estate assets, with such requirements being dynamic by reference to the in-scope REMU assets remaining on the balance sheet of the Group and the value of such assets. As at 31 December 2025 the impact of these requirements was 65 bps on the Group's CET1 ratio compared to 51 bps as at 31 December 2024. The above-mentioned requirements are within the capital plans of the Group and incorporated within its capital projections.

The prudential filters of Articles 32 and 33 of the CRR are not applicable to the Group.

Deductions from own funds

The following items which are deductible from CET1 capital in accordance with Article 36 of the CRR are as follows:

- Intangible assets, which include mainly computer software, were deducted from CET1 capital as per CRR provisions (Article 36(1) (b)). The amount deducted in 2025 and 2024 is reported within the 'Intangible assets' line 8 in the tables above. In December 2020 the revised rules on the prudential treatment of software assets as amended by CRR II came into force, under which, EU banks no longer have to fully deduct prudently valued software and IT systems from CET1 capital.
- The Group's Insurance business is deconsolidated for regulatory capital purposes and replaced by the amount of the Group's investment in insurance entities. In line with the CRR provisions (Articles 47 and 48) and subject to the transitional arrangements, the excess of 10% of CET1 is deducted from the capital (shown as 'Direct, indirect and synthetic holdings by the institution of the CET1 instruments of financial sector entities where the Group has a significant investment in those entities' in the tables above) and the amount of less than 10% is risk-weighted at 250%. In addition, as at 31 December 2025 the Group had deferred tax assets arising from temporary differences (amount below 17.65% threshold, net of related tax liability where the conditions in Article 38 (3) CRR are met) and the amount was risk-weighted at 250% (reported in line 75 in the tables above).

Moreover, as of 30 September 2023, the amount relating to ECB's prudential provisioning expectations is deducted from CET1 capital (Article 3 of the CRR) and has been eliminated from the Pillar II SREP capital requirements on 1 January 2024. This deduction amounted to c.€20 million as at 31 December 2025 and c.€28 million as at 31 December 2024 and is reported within the 'Other regulatory adjustments' line 27a in the tables above.

In addition, during 2025 and 2024, the Group deducted from CET1 a prudential charge relating to specific credits as mentioned above.

There are no deductions from the T2 capital under Article 66 of the CRR.

There are no deductions from the AT1 capital under Article 56 of the CRR.

1 January and 31 December	436	43	440	44

Authorised and issued share capital

All issued ordinary shares carry the same rights.

The authorised capital of the Company is €1,000,000 thousand divided into 10,000,000 thousand ordinary shares of a nominal value €0.10 each. There were no changes to the authorised share capital during the year ended 31 December 2025 and 2024.

As of 31 December 2025, the Company had 435,686 thousand issued shares (2024: 440,502 thousand issued shares) of a nominal value of €0.10 each.

During the year ended 31 December 2025, 327 thousand shares of a nominal value of €0.10 each were issued and granted to the eligible employees of the Group in the context of the share-based schemes.

During the year ended 31 December 2025, the number of shares issued decreased by 5,143 thousand shares and the value of the issued share capital decreased by €514 thousand, as shares were repurchased and cancelled under the share repurchase program. As a result, an equivalent amount of €514 thousand has been transferred to the Company's capital redemption reserve by 31 December 2025.

During the year ended 31 December 2024, the number of shares issued decreased by 5,698 thousand shares and the value of the issued share capital decreased by €570 thousand, as shares were repurchased and cancelled under the share repurchase programme.

Share premium reserve

There were no changes to the share premium reserve during the year ended 31 December 2025 and 2024.

Share repurchase programme (Buyback)

In February 2025, the Group launched a programme to buy back ordinary shares of the Company for an aggregate consideration of up to €30,000 thousand as part of the distribution in respect of 2024 earnings. The programme took place on the Main Market of the Regulated Securities Market of the ATHEX and the CSE. The purpose of the Programme was to reduce the Company's issued share capital and therefore the shares purchased under the Programme were cancelled.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

5.1 CRD Regulatory Capital (continued)

Under the 2025 buyback programme which was completed on 16 June 2025, 5,143 thousand shares were repurchased for a total consideration of €30,000 thousand. In July 2025, the shares repurchased were cancelled.

Capital redemption reserve

The capital redemption reserve is a legal reserve arising as a result of the acquisition and cancellation of the Company's ordinary shares under the buyback programme and represents transfers from share capital. The capital redemption reserve is not distributable. As at 31 December 2025, the capital redemption reserve amounted to €1,084 thousand representing 10,841 thousand shares in the Company which have been cancelled as a result of the buyback programs executed during the years ended 31 December 2025 and 2024 relating to the distributions in respect of 2024 and 2023 earnings respectively (2024: €570 thousand representing 5,698 thousand shares which have been cancelled as a result of the buyback program relating to the distribution in respect of 2023 earnings).

Treasury shares of the Company

The consideration paid, including any directly attributable incremental costs (net of income taxes), for shares of the Company held by the Company and by entities controlled by the Group is deducted from equity attributable to the owners of the Company as treasury shares, until these shares are cancelled or reissued. No gain or loss is recognised in the consolidated income statement on the purchase, sale, issue or cancellation of such shares.

The life insurance subsidiary of the Group, as at 31 December 2025, held a total of 153 thousand ordinary shares of the Company of a nominal value of €0.10 each (2024: 142 thousand ordinary shares of a nominal value of €0.10 each), as part of its financial assets which are invested for the benefit of insurance policyholders. The cost of acquisition of these shares was €21,537 thousand (2024: €21,463 thousand).

Distributions

Based on the relevant SREP decisions applicable in the year 2024, any equity dividend distribution was subject to regulatory approval, both for the Company and BOC PCL. Following the SREP decision received in December 2024 the requirement for approval was lifted effective from 1 January 2025.

Interim cash dividend in respect of 2025 earnings

In August 2025, the Board of Directors of the Company approved the payment of an interim dividend by the Company of €0.20 per ordinary share in respect of the Group's financial performance for the six months ended 30 June 2025. The interim dividend, amounted to an aggregate cash dividend of €87 million (calculated by reference to the number of shares in issue as at 30 June 2025 excluding treasury shares held by the Company, which have been subsequently cancelled in July 2025).

Final cash dividend and aggregate distribution in respect of 2025 earnings

In February 2026, the Company announced its proposal for a final cash dividend of €0.50 per ordinary share in respect of 2025 earnings. The proposed final cash dividend together with the interim dividend of €0.20 per ordinary share paid in October 2025, amount to a total cash dividend of €0.70 per ordinary share and an aggregate distribution of €305 million in respect of 2025 earnings, all in the form of cash dividend.

The proposed final cash dividend is subject to shareholders' approval at the AGM that will be held on 16 May 2026. The financial statements for the year ended 31 December 2025 do not reflect this dividend, which will be accounted for in shareholders' equity as an appropriation of retained earnings in the year ending 31 December 2026.

Distribution in respect of 2024 earnings

In February 2025, the Company announced its proposal to make a distribution in respect of 2024 earnings, comprising a cash dividend of €0.48 per ordinary share and a share buyback in an aggregate consideration amount of up to €30 million (together, the '2024 Distribution'). The AGM, on 16 May 2025, approved a final cash dividend in respect of earnings for the year ended 31 December 2024. The aggregated cash dividend in respect of the 2024 dividend distribution amounted to €209 million based on the number of shares in issue as at the relevant record date.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

5.1 CRD Regulatory Capital (continued)

Distribution in respect of 2023 earnings

In March 2024, the Company obtained the approval of the European Central Bank to pay a cash dividend and to conduct a share buyback (together, the '2023 Distribution') in respect of earnings for the year ended 31 December 2023. The 2023 Distribution amounted to €137 million in total, comprising a cash dividend of €112 million and a share buyback of up to €25 million. The AGM, on 17 May 2024, approved a final cash dividend of €0.25 per ordinary share in respect of earnings for the year ended 31 December 2023.

5.2 Summary of the terms and conditions of Capital Resources

The capital base of the Group for regulatory purposes consists of ordinary shares (CET1 instruments) and AT1 and T2 instruments.

Group CET1 instruments consist only of ordinary shares (Sections 5.1 and 5.3).

Other equity instruments

2023 Reset Perpetual AT1 Capital Securities

In June 2023, the Company issued €220,000 thousand Fixed Rate Reset Perpetual AT1 Capital Securities (the 'Capital Securities'). The Capital Securities constitute unsecured and subordinated obligations of the Company, are perpetual and issued at par. They carry an initial coupon of 11.875% per annum, payable semi-annually, and resettable on 21 December 2028 and every five years thereafter. The Company may elect to cancel any interest payment for an unlimited period, on a non-cumulative basis, whereas it mandatorily cancels interest payment under certain conditions. The Capital Securities are perpetual and have no fixed date of redemption but can be redeemed (in whole but not in part) at the Company's option from, and including, 21 June 2028 to, and including, 21 December 2028 and on each interest payment date thereafter, subject to applicable regulatory consents and the relevant conditions to redemption. The Capital Securities are listed on the Luxembourg Stock Exchange's Euro Multilateral Trading Facility (MTF) market.

The full terms and conditions of the AT1 Capital Securities are presented in Section 5.3.

For financial reporting purposes AT1 is classified as other equity instrument within equity and the coupon payments are recognised in retained earnings.

Subordinated Liabilities

Subordinated Tier 2 Capital Note – September 2025

In September 2025, BOCH issued €300 million unsecured and subordinated Tier 2 Capital Note (the '2025 Note') under the EMTN Programme. The 2025 Note was priced at 99.632% and has a coupon of 4.250% per annum payable annually in arrear and resettable on 18 September 2031 at the then prevailing 5-year swap rate plus a margin of 1.95% per annum up to 18 September 2036, payable annually. The 2025 Note matures on 18 September 2036. BOCH has the option to redeem the New Notes early on any day during the six-month period commencing 18 March 2031 to and including, 18 September 2031, subject to applicable regulatory consents and the relevant conditions to redemption. The 2025 Note is listed on the Luxembourg Stock Exchange's Euro MTF market.

Subordinated Tier 2 Capital Note - April 2021

In April 2021, BOCH issued a €300 million unsecured and subordinated Tier 2 Capital Note (the '2021 Note') under the EMTN Programme. The 2021 Note was priced at par with a coupon of 6.625% per annum payable annually in arrear and resettable on 23 October 2026 at the then prevailing 5-year swap rate plus a margin of 6.902% per annum up to 23 October 2031, payable annually. The 2021 Note had a maturity date on 23 October 2031. BOCH has the option to redeem the 2021 Note early on any day during the six-month period from 23 April 2026 to 23 October 2026, subject to applicable regulatory consents. The note is listed on the Luxembourg Stock Exchange's Euro MTF market.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

5.2 Summary of the terms and conditions of Capital Resources (continued)

In September 2025, BOCH invited the holders of the 2021 Note to tender it for cash purchase by BOCH at a price of 102.3% plus accrued interest. BOCH received valid tenders of approximately €217 million in aggregate principal amount, all of which were accepted. BOCH also paid the accrued interest due on the 2021 Note up to but excluding the settlement date. As a result of the tender offer, €217,287 thousand in aggregate principal amount of the 2021 Note were purchased and cancelled by BOCH. In December 2025, the Company further purchased in the open market €300 thousand of the then outstanding nominal amount the 2021 Note, and €82,413 thousand in aggregate principal amount remained outstanding as at 31 December 2025. The 2021 Notes remaining outstanding were deducted from the capital of the Company for 31 December 2025.

Debt securities in issue

All issuances of senior preferred notes comply with the criteria for the Minimum Requirement for Own Funds and Eligible Liabilities ('MREL') and contribute towards the Bank's MREL requirements.

Senior Preferred Notes - June 2021

In June 2021, BOC PCL issued a €300 million senior preferred note under the EMTN Programme. The note was priced at par with a fixed coupon of 2.50% per annum, payable annually in arrears and resettable on 24 June 2026. The note matures on 24 June 2027. BOC PCL has the option to redeem the note early on 24 June 2026, subject to applicable regulatory consents. The note is listed on the Luxembourg Stock Exchange's Euro MTF market.

Senior Preferred Notes - July 2023

In July 2023, BOC PCL issued a €350 million senior preferred note under the EMTN Programme. The note was priced at par with a fixed coupon of 7.375% per annum, payable annually in arrears and resettable on 25 July 2027. The note matures on 25 July 2028. BOC PCL has the option to redeem the note early on 25 July 2027, subject to applicable regulatory consents. The note is listed on the Luxembourg Stock Exchange's Euro MTF market.

Green Senior Preferred Notes - May 2024

In May 2024, BOC PCL issued a €300 million green senior preferred note under the EMTN Programme. The note was priced at par with a fixed coupon of 5.00% per annum, payable annually in arrear and resettable on 2 May 2028. The note matures on 2 May 2029. BOC PCL has the option to redeem the note early on 2 May 2028, subject to applicable regulatory consents. The note is listed on the Luxembourg Stock Exchange's Euro MTF market.

Debt securities in issue and subordinated liabilities are initially measured at the fair value of the consideration received, net of any issue costs. They are subsequently measured at amortised cost using the effective interest rate method, in order to amortise the difference between the cost at inception and the redemption value, over the period to the earliest date that the Group has the right to redeem those instruments. Interest on debt securities in issue and subordinated liabilities is included in 'Interest expense' in the consolidated income statement.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

5.4 Minimum Requirement for Own Funds and Eligible Liabilities (MREL)

The Bank Recovery and Resolution Directive (BRRD) requires that from January 2016 EU member states shall apply the BRRD's provisions requiring EU credit institutions and certain investment firms to maintain a Minimum Requirement for Own Funds and Eligible Liabilities (MREL), subject to the provisions of the Commission Delegated Regulation (EU) 2016/1450. On 27 June 2019, as part of the reform package for strengthening the resilience and resolvability of European banks, the BRRD II came into effect and was required to be transposed into national law. BRRD II was transposed and implemented in Cyprus law in May 2021. In addition, certain provisions on MREL have been introduced in CRR II which also came into force on 27 June 2019 as part of the reform package and were immediately effective.

Bank of Cyprus Public Company Limited (BOC PCL) as a resolution entity, is also within the scope of Regulation (EU) 806/2014 establishing uniform rules and a uniform procedure for the resolution of credit institutions and certain investment firms in the framework of a Single Resolution Mechanism and a Single Resolution Fund and is subject to the Single Resolution Board's obligation to determine MREL.

In January 2025, BOC PCL received notification from the SRB regarding the 2025 MREL decision, by which the MREL requirement is set at 23.85% of risk weighted assets (or 29.18% of risk weighted assets taking into account the prevailing CBR as at 30 September 2025 which needs to be met with own funds on top of the MREL) and 5.91% of Leverage Ratio Exposure (LRE). The revised MREL requirements became binding with immediate effect.

In December 2025, BOC PCL received notification from the SRB, by which the MREL requirement is now set at 24.03% of risk weighted assets (or 29.36% of risk weighted assets taking into account the prevailing CBR as at 31 December 2025 which needs to be met with own funds on top of the MREL) and 5.91% LRE. The revised MREL requirements became binding with immediate effect.

BOC PCL must comply with the MREL requirement at the consolidated level, comprising BOC PCL and its subsidiaries.

The template below provides the key quantitative metrics on BOC PCL Group's loss-absorbing and recapitalisation capacity at the resolution group level. It discloses the Minimum Requirement for Own Funds and Eligible Liabilities (MREL) and, where applicable, the TLAC requirement for G-SIIs, including the underlying components such as the Total Risk Exposure Amount (TREA), Total Exposure Measure (TEM), own funds, eligible liabilities, and their sub-categorisations.

Notes:

1. Unsecured claims resulting from debt instruments that cumulatively meet the following conditions:
 - i. the original contractual maturity of the debt instruments is of at least one year,
 - ii. the debt instruments contain no embedded derivatives and are not derivatives themselves (debt instruments with variable interest, derived from a broadly used reference rate and debt instruments not denominated in the domestic currency of the issuer, provided that principal, repayment and interest are denominated in the same currency, are not considered debt instruments containing embedded derivatives solely because of those features),
 - iii. the relevant contractual documentation and, where applicable, the prospectus related to the issuance, explicitly refer to the lower ranking.
2. Ordinary unsecured claims, against:
 - i. Authorised Credit Institutions,
 - ii. Authorised Credit Institutions which are branches of third country institutions, in accordance with the special conditions set out in Part IX of the Resolution Law,
 - iii. financial institutions that are established in the Union when the financial institution is a subsidiary of a credit institution, or of a company referred to in subparagraph (ii) or (iii), and is covered by the supervision of the parent undertaking on a consolidated basis in accordance with Articles 6 to 17 of Regulation (EU) No 575/2013,
 - iv. financial holding companies, mixed financial holding companies and mixed activity holding companies that are established in the Republic,
 - v. parent financial holding companies established in the Republic, parent financial holding companies established in the EU, parent mixed financial holding companies established in the EU, including claims from derivatives, as well as claims from debt instruments, excluding the claims from debt instruments referred to in categories CY5, CY4, CY3 and CY2 above.
3. The following with the same priority ranking:
 - i. other deposits,
 - ii. claims from trade creditor or supplier, associated with the provision of goods and services to the institution or to the person concerned for the daily functioning of its operations, including common IT services, as well as rental, care and maintenance of installations.
4. The following with the same priority ranking:
 - i. that part of eligible deposits from natural persons and micro, small and medium-sized enterprises which exceeds the coverage level provided for in the Regulations 8 and 9 of the Deposit Guarantee and Resolution of Credit and Other Institutions Scheme,
 - ii. deposits from natural persons, micro, small and medium-sized enterprises that would be eligible deposits if they were not made through branches located outside the European Union of ACIs established in the European Union.
5. The following with the same priority ranking:
 - i. covered deposits,
 - ii. the deposit guarantee scheme that restores the rights and obligations of the covered depositors in the case of insolvency.
6. Necessary and reasonable expenses of the liquidator or the special liquidator, including business expenses during the application of the provisions of the liquidation or the special liquidation, accordingly.
7. Claims resulting from credits granted by the Central Bank before the appointment of a liquidator or a special liquidator.
8. Debts or claims secured by a charge on the assets of the ACI up to the amount resulting from the liquidation of the collateral or the guarantee is delivered to the beneficiary creditor.
9. The following with the same priority ranking:
 - i. Preferential debts, pursuant to Section 300 (1) & (2) of the Companies Law,
 - ii. Resolution expenses of the National Resolution Authority (NRA) and National Resolution Fund, pursuant to Section 45(7)(b) of Resolution Law,
 - iii. Resolution expenses to the SRB, pursuant to Article 22(6) of the SRM.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

6. Own Funds Requirements and Risk Weight Assets

6.1 Minimum Required Own Funds for Credit, Market and Operational Risk Group's approach to assessing the adequacy of its internal capital

The Group assesses its capital requirements taking into consideration its regulatory requirements, risk profile and risk appetite set by the Board. A Financial Plan (Plan) is annually prepared, revising the financial forecasts and capital projections over a three-year (as a minimum) horizon in light of recent developments and it is approved by the Board. The Plan takes into account the Group key strategic pillars and RAF. The Plan is rolled forward on a quarterly basis after taking into account the actual results of each quarter.

The Group capital projections are developed with the objective of maintaining capital that is adequate in quantity and quality to support the Group's risk profile, regulatory and business needs. These are frequently monitored against relevant internal target capital ratios to ensure they remain appropriate, and consider risks to the plan, including possible future regulatory changes. An internal assessment of the Group's capital adequacy is undertaken through the ICAAP (Section 3.1.16).

The main strategic and business risks are monitored regularly by the EXCO, the ALCO and the RC. These committees receive regular reports on risk and performance indicators, from relevant managers and make decisions to ensure adherence to the Group's strategic objective, while remaining within the Group RAS.

The Group's key priorities are to continue to generate sustainable and resilient profitability and deliver attractive shareholder returns, while simultaneously supporting the Group's stakeholders and the broader economic environment. The main drivers to accomplish these priorities are the following:

- Generate high quality revenue growth through domestic loan growth and selective expansion of international loan portfolio and growth in both banking and non-banking areas (such as capital-light insurance revenues) to grow recurring non-interest income and to complement the strength of the domestic franchise.
- Maintain sustainable and resilient profitability via ongoing cost management discipline while continuing to invest in IT, including AI and maintaining low cost of risk in order to retain a low-risk business model.
- Achieve strong capital generation and upscaled distributions by maintaining high capital strength, whilst gradually returning excess, investing the surplus capital for long-term value and maintaining strategic optionality.

As of 1 January 2018, the RWAs were reported on an IFRS 9 transitional basis under article 473(a) of the CRR by which until 27 June 2020 provisions amounts were decreased by an appropriate ratio. As of 27 June 2020, following the amendment of the CRR, the IFRS 9 amount added back to CET1 capital was included as an exposure to "Other Items" and risk weighted at 100%. Both approaches create higher exposures compared to the actual balance sheet values and as a result comparatively higher RWAs and capital requirements. The IFRS 9 transitional basis effect for the "static component" was phased out on 1 January 2023 and for the "dynamic component" was phased out on 1 January 2025. Furthermore, as of 27 June 2020 the RWA of certain eligible debt securities were reported on a transitional basis under article 468 of the CRR by which provision amounts were decreased by the amount that was added back to CET1 capital. The transitional basis effect was phased out on 1 January 2023. Further information is disclosed in Section 6.3.

The Standardised Approach has been applied to calculate the Risk Weighted Assets (RWAs) for Credit Risk. Minimum capital requirements are calculated as 8% of the RWAs. The total capital requirement decreased in 2025 (€834 million) in comparison to 2024 (€867 million) with the main driver being the decrease in operational risk RWAs and to a lesser extent in credit risk RWAs following implementation of CRR III, as well as the overall decrease in "Other assets" related exposures (such as stock of properties) partly offset by an increase in customer advances and investments.

Notes:

1. Amounts and ratios include profits for the year ended 31 December 2025 net of a deduction for a distribution in respect of 2025, following relevant recommendation by the Board of Directors to the shareholders for a final cash dividend of €218 million, as disclosed in subsection ‘Distributions’ of Section 5.1 CRD Regulatory Capital.
2. Amounts and ratios do not include quarterly profits for the three months ended 30 September 2025. Including the quarterly profits and an accrual for a distribution at a payout ratio of 70% of the Group’s adjusted profitability for the period, which represents the top-end range of the Group’s approved distribution policy in line with the principles of Commission Delegated Regulation (EU) (241/2014) for foreseeable dividends and charges, the CET1 ratio and Total Capital ratio stood at 20.5% and 25.4% respectively, on a transitional basis.

Pillar 3 Disclosures 2025

6.3 Comparison of institution's own funds and capital and leverage ratios with and without the application of transitional arrangements for IFRS 9 or analogous ECLs, and with and without the application of the temporary treatment in accordance with Article 468 of the CRR (continued)

3. Amounts and ratios include reviewed profits for the six months ended 30 June 2025 in line with the ECB Decision (EU) (2015/656) on the recognition of interim or year-end profits in CET1 capital in accordance with Article 26(2) of the CRR and an accrual for a distribution at a payout ratio of 70% of the Group's adjusted recurring profitability for the period, which represents the top-end range of the Group's approved distribution policy in line with the principles of Commission Delegated Regulation (EU) (241/2014) for foreseeable dividends and charges.
4. Amounts and ratios do not include quarterly profits for the three months ended 31 March 2025. Including the quarterly profits and an accrual for a distribution at a payout ratio of 70% of the Group's adjusted profitability for the period, which represents the top-end range of the Group's approved distribution policy in line with the principles of Commission Delegated Regulation (EU) (241/2014) for foreseeable dividends and charges, the CET1 ratio and Total Capital ratio stood at 19.9% and 25.0% respectively, on a transitional basis.
5. Amounts and ratios include profits for the year ended 31 December 2024 net of deduction for a distribution in respect of 2024 earnings of €241 million, following relevant recommendation by the Board of Directors to the shareholders for a final cash dividend of €211 million and approval by the Board to undertake a share buyback of ordinary shares of the Company for an aggregate consideration of up to €30 million and in compliance with the terms of the ECB approval.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

6.3 Comparison of institution's own funds and capital and leverage ratios with and without the application of transitional arrangements for IFRS 9 or analogous ECLs, and with and without the application of the temporary treatment in accordance with Article 468 of the CRR (continued)

The Group applied the IFRS 9 on 1 January 2018. The accounting standard allows the impact on the implementation date, 1 January 2018, to be recognised through equity rather than the income statement. The Group's IFRS 9 impacts on transition resulted in a decrease of shareholders' equity of €308 million and was primarily driven by credit impairment provision.

The Group elected in prior years to apply the 'static-dynamic' approach in relation to the transitional arrangements for the initial application of IFRS 9 for regulatory capital purposes where the impact on the impairment amount from the initial application of IFRS 9 on the capital ratios was phased in gradually, pursuant to EU Regulation 2017/2395 and it therefore applied paragraph 4 of Article 473(a) of the CRR. The 'static-dynamic' approach allowed for recalculation of the transitional adjustment periodically on Stage 1 and Stage 2 loans, to reflect the change of the ECL provisions within the transition period. The Stage 3 ECL remained static over the transition period as per the impact upon initial recognition.

The amount added each year for the 'static component' was decreasing based on a weighting factor until the impact of IFRS 9 was fully absorbed back to CET1 at the end of the five years, with the impact being fully phased in (100%) by 1 January 2023. The cumulative impact on the capital position was fully phased in (100%) on 1 January 2023.

Following the June 2020 amendments to the CRR, the Group applied the amendments in relation to the IFRS 9 transitional arrangements for Stage 1 and Stage 2 loans (i.e. the 'dynamic component') which provided for the extension of the transitional period for the 'dynamic component'. A 100% add back of IFRS 9 provisions was allowed for the years 2020 and 2021 reducing to 75% in 2022, to 50% in 2023 and to 25% in 2024. This was fully phased in (100%) by 1 January 2025. The calculation at each reporting period was against Stage 1 and Stage 2 provisions as at 1 January 2020, instead of 1 January 2018.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

7. Counterparty Credit Risk (CCR)

CCR arises from the possibility that a counterparty may fail to fulfil its obligations arising from derivative transactions or securities financing transactions (SFTs), such as repurchase agreements. The Bank is employing the SA-CCR method for derivatives and the Financial Collateral Comprehensive method for SFTs.

Following the implementation of the amending regulation 2019/876 of the CRR, referred to as CRR II, the Mark-to-Market (MTM) method which the Group applied up to 28 June 2021 in calculating the exposure value of derivative positions has been abolished and the new SA-CCR was implemented. Under the new approach laid down in Part 3, Title II Chapter 6 of the CRR, the exposure values on which RWA for counterparty credit risk and Credit Valuation Adjustment (CVA) are calculated, are considerably higher compared to the application of MTM. The RWA impact for the Group remains negligible due to (a) decreased derivative positions and (b) a significant amount of the Group's derivative positions is cleared through a Qualifying Central Counterparty (QCCP) with a RW of 2%.

There is a material increase between 31 December 2025 and 31 December 2024 in the exposures values, collateral and RWA that arise from counterparty credit risk due to the SFTs.

EU CCR1 – Analysis of CCR exposure by approach

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

7.1 Internal Capital and Credit Limits for Counterparty Credit Exposures

The internal counterparty credit model sets the reference limits for financial institutions, based on their credit rating, the Bank's CET1 capital base and an internal scoring system which considers qualitative and quantitative factors such as:

- Asset risk
- Capital adequacy
- Profitability
- Liquidity
- Market share
- Ownership strength
- Rating outlook
- Country rating

Two types of limits are monitored:

- a. Credit: for MM placements, FX (FX swaps, FX forwards), bonds, derivatives, commercial transactions, Nostros, pledged amounts for collateral, Repos, Reverse Repos and Factors.
- b. Settlement: for maturing FX spot, FX forward and FX swaps, MM placements, Nostro, pledged amounts for collateral and banknotes.

Limit amounts and Tenor limits follow the Counterparty & Country Credit Models and Limits document. The approval levels are set in the Counterparty and Country credit Limit Framework. Limits for derivative transactions are assigned to counterparties with a Credit Support Annex (CSA) agreement in place and enforceability of netting. Allocated derivative limits with counterparties that have not signed a CSA and the Legal Services department has not yet advised that netting is enforceable or has informed that netting is not enforceable, can be set following ALCO approval.

The derivative sub-limit for the Mark to Market of a contract counts within the overall credit limit of the counterparty and can be equal to the total credit limit. There is also a concentration limit for the maximum notional amount of contracts with each counterparty, as per the approved Concentration Policy. Any exceptions to the maximum notional amounts can be approved as per the Counterparty and Country credit Limit Framework.

Credit risk arising from entering into derivative transactions with counterparties is measured using the mark-to-market method.

Risk Reporting and measurement system for Counterparty Credit Risk

Counterparty credit and settlement limits for Treasury transactions are monitored real-time through the Bank's front to back system. In the case of a breach, an automatic e-mail is sent to the dealers and MLR officers with an attached report including all the necessary details of the deal creating the breach.

It is noted that all efforts take place to avoid limit breaches. Any breaches are reported following the escalation process depending on the limit breach as per the Counterparty and Country Credit Limit Framework.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

7.2 Policies for Securing Collateral and Establishing Credit Reserves

Collateral management involves multiple parties and various departments of the Bank. The collateral management team is the Treasury Back office.

The responsibilities of the collateral management team are as follows:

- a. Handling collateral valuations and margin calls (for derivatives).
- b. Maintain relevant data and liaise with counterparties regarding issues of collaterals.

The use of collateral for funding purposes relating to the Cyprus operations is managed by Treasury Division, with specific authorised personnel having the responsibility to manage it.

The Fixed Income and Portfolio Management desk is responsible for reviewing and managing fixed income securities as collateral, both for counterparty repos and ECB funding. The Funding & Liquidity department is jointly responsible with the Money Market & Interest Rate and FX Risk Management desk in collaboration with other departments of the Bank to monitor the use of cash as collateral. Also Funding & Liquidity department is responsible for the monitoring and use of loan assets for funding programmes collateralised by loans such as Covered Bond Issuance and Additional Credit Claims (ACCs).

The Regulatory, Governance and Agreements Management department within Treasury Division handles legal documentation (in collaboration with the Legal Service department) and relevant reporting. The Legal Service department provides advice and support regarding relevant agreements for collateralisation.

The Group has chosen the International Swaps and Derivatives Association, Inc. (ISDA) Master Agreement for contracting its derivatives activity. These agreements provide the contractual framework within which dealing activity across a full range of Over-The-Counter (OTC) products is conducted and contractually binds both parties to apply close-out netting across all outstanding transactions covered by an agreement, if either party defaults. They may also reduce settlement exposure (e.g. for FX transactions) by allowing same-day same-currency payments to be set-off against one another. In most cases, the parties execute a CSA agreement in conjunction with the ISDA Master Agreement. Under a CSA, collateral is passed between the parties in order to mitigate the market contingent counterparty risk inherent in their open positions. CSAs further mitigate risk by allowing collateral to be posted on a regular basis to collateralise the mark to market exposure of a net derivative portfolio. For uncleared derivative trades, the Group trades under Variation Margin CSA agreements in line with European Markets Infrastructure Regulation (EMIR) margining provisions whereby thresholds have been set to zero and collateral exchange is carried out on a daily basis following the netting of exposures on a T+1 basis.

For derivative trades which are eligible for clearing, the Group trades under ISDA Cleared Derivatives Execution Agreement agreements (CDEA) with its counterparties so that eligible trades are cleared centrally with London Clearing House Central Clearing Counterparty and EUREX.

The Group has chosen the Global Master Repurchase Agreement (GMRA) for conducting its repurchase activity. It is a legal agreement designed for parties transacting in repos/reverse repos and is published by the International Capital Market Association (ICMA), which is the body representing the bond and repo markets in Europe. It provides the contractual framework within Buy/Sell Back transactions are conducted and contractually binds both parties to apply close-out netting across all outstanding transactions and collateral covered by an agreement, if either party defaults.

As at 31 December 2025, the Group had signed the CSA annex of the ISDA Master Agreement with 34 counterparties (2024: 33 counterparties) and Global Master Repurchase Agreements (GMRAs) with 16 counterparties (2024: 15 counterparties). The Bank has an agreement in place with a Qualifying Central Counterparty (QCCP).

As at 31 December 2025, the Group maintained CSA exposures with 12 counterparties, one of which is QCCP (2024: 11 counterparties one of which is QCCP). As at 31 December 2025 the Group had four exposures under GMRA (2024: three exposures under GMRA).

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

7.2 Policies for Securing Collateral and Establishing Credit Reserves (continued)

The following table presents the total amounts that were transferred to (where the indicated amount is negative) or obtained from (where the indicated amount is positive) counterparties as a result of reaching the threshold amounts of 9 counterparties (2024: 9 counterparties) for CSAs, one of which the QCCP.

	2025	2024
	€ 000	€ 000
Total Positive	56,239	40,643
Total Negative	(2,270)	-
Total	53,969	40,643

A net amount of €62.9 million has been received from third counterparties as at 31 December 2025 for GMRAs collateral amount due to the Reverse Repurchase exposure (2024: €6.4 million has been received).

7.2.1 Policies with Respect to Wrong-Way Risk Exposures

Wrong way risk occurs when an exposure to a counterparty is adversely correlated with the credit quality of that counterparty i.e. changes in market rates (interest rates, FX or other rates which are the main underlying factors of the Group's derivative transactions) have an adverse impact on the Probability of Default (PD) of a counterparty. This risk is not currently measured as it is not anticipated to be significant given that the bulk of the deals are cleared with the Bank's QCCP and the existence of CSAs for almost all the uncleared derivative transactions, with daily settlement of margins that significantly reduce credit risk resulting in a total accounting CVA charge equal to only €45 thousand as at 31 December 2025 (2024: €72 thousand).

7.2.2 Collateral the Group would have to provide given a Downgrade in its Credit Rating

As at 31 December 2025, the only instance where the Group would have to provide additional collateral in the event of a downgrade, involved derivative transactions under ISDA agreements, where a CSA has been signed and includes downgrade triggers. Currently, no CSA agreement is linked to the credit ratings of the involved parties. Thus, no additional collateral would have been required, as at 31 December 2025, in the event of a downgrade.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

8. Countercyclical Capital Buffers

The majority of the CcyB relevant exposures of the Group arise in Cyprus and the increase in the institution specific countercyclical capital buffer of the Group from 0.48% to 0.90% mainly reflects the increase as at 02 June 2024 of CcyB from 0.50% to 1.00% of the total risk exposure amounts in Cyprus. Furthermore, in January 2025, the CBC, based on its macroprudential policy, decided to increase the CcyB rate from 1.00% to 1.50% of the total risk exposure amount in Cyprus of each credit institution incorporated in Cyprus effective from January 2026. Based on the above, the CcyB for the Group is expected to increase further. Moreover, there has been an increase in the CcyB rate of other countries where the Group holds exposures (mainly Greece, Hungary, Poland and Spain).

The CcyB relevant exposures are exposure values after credit conversion factors (CCF) and CRM applied in the calculation of RWA and they relate to all exposure classes other than the below:

- a) exposures to central governments or central banks;
- b) exposures to regional governments or local authorities;
- c) exposures to public sector entities;
- d) exposures to multilateral development banks;
- e) exposures to international organisations;
- f) exposures to institutions;

The institution specific countercyclical capital buffer is the average CcyB weighted by the relevant total own funds requirements by country.

8. Countercyclical Capital Buffers (continued)

Amount of specific Countercyclical Capital Buffer

EU CCyB2 - Amount of institution specific countercyclical capital buffer

	a	b
	31 December 2025	31 December 2024
	€ million	€ million
Total risk exposure amount	10,424	10,834
Institution specific countercyclical capital buffer rate	0.90%	0.92%
Institution specific countercyclical capital buffer requirement	93	100

The specific countercyclical capital buffer rate of the Group as of 31 December 2025 remained relatively unchanged at 0.90% (31 December 2024: 0.92%). In January 2025, the CBC, based on its macroprudential policy, decided to increase the CcyB rate from 1.00% to 1.50% of the total risk exposure amount in Cyprus of each credit institution incorporated in Cyprus effective from January 2026. Based on the above, the CcyB for the Group is expected to increase.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

9. Credit Risk

9.1 Past Due and Credit Impaired Loans

Past due and credit impaired loans

Past due loans are those with delayed payments or in excess of authorised credit limits. All past-due exposures more than 90 days are considered to be impaired.

The Group considers loans and advances to customers that meet the NPE definition as per EBA standards to be in default and hence Stage 3 (credit impaired). Therefore, such loans have ECL calculated on a lifetime basis and are considered to be in default for credit risk management purposes.

The definitions of credit impaired and default are aligned so that Stage 3 represents loans which are considered defaulted or otherwise credit impaired. When a financial asset has been identified as credit impaired, ECL are measured as the difference between the asset's gross carrying amount and the present value of estimated future cash flows discounted at the instrument's original effective interest rate.

From 1 January 2021 two regulatory guidelines came into force that affect NPE classification and Days Past Due calculation. More specifically, these are the RTS on the Materiality Threshold of Credit Obligations Past Due (EBA/RTS/2016/06) and the Guideline on the Application of the Definition of Default under article 178 (EBA/RTS/2016/07).

The Days Past Due (DPD) counter begins counting DPD as soon as the arrears or excesses of an exposure reach the materiality threshold (rather than as of the first day of presenting any amount of arrears or excesses). Similarly, the counter will be set to zero when the arrears or excesses drop below the materiality threshold. Payments towards the exposure that do not reduce the arrears/excesses below the materiality threshold, will not impact the counter.

Expected credit losses (ECL)/impairment of loans and advances to customers

The Group uses a forward looking ECL model, requiring judgement, estimates and assumptions in determining the level of ECL. ECL is recorded for all financial assets measured at amortised cost and FVOCI, lease receivables, loan commitments and financial guarantee contracts. Equity instruments are not subject to impairment.

At initial recognition, impairment allowance (or provision in the case of commitments and guarantees) is required for ECL resulting from default events that are possible within the next 12 months (12-month ECL), unless assets are deemed as Purchased or originated financial asset (POCI) whereby the ECL is measured on a lifetime basis. In the event of a significant increase in credit risk since initial recognition, impairment allowance is required resulting from all possible default events over the expected life of the financial instrument (lifetime ECL).

The Group categorises its financial assets into Stage 1, Stage 2, Stage 3 and POCI for ECL measurement as described below:

Stage 1: Financial assets which did not have a significant increase in credit risk since initial recognition are considered to be Stage 1 and 12-month ECL is recognised.

Stage 2: Financial assets which are considered to have experienced a significant increase in credit risk since initial recognition are considered to be Stage 2 and lifetime ECL is recognised.

Stage 3: Financial assets which are considered to be credit-impaired and lifetime ECL is recognised.

POCI: These are purchased or originated financial assets that are credit impaired on initial recognition. POCI assets include loans purchased or originated at a deep discount that reflects incurred credit losses. Changes in lifetime ECL since initial recognition are recognized until a POCI loan is derecognised.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

9.1 Past Due and Credit Impaired Loans (continued)

ECL is recognised in profit or loss with a corresponding ECL allowance reported as a decrease in the carrying value of financial assets measured at amortised cost on the balance sheet. For financial assets measured at FVOCI the carrying value is not reduced, but the accumulated amount of ECL allowance is recognised in OCI. For off-balance sheet instruments, accumulated provisions for ECL are reported in 'Accruals, deferred income, other liabilities and other provisions', except in the case of loan commitments where ECL on the loan commitment is recognised together with the loss allowance of the relevant on balance-sheet exposure, as the Group cannot separately identify the ECL on the loan commitment from those on the on-balance sheet exposure component. ECL for the period is recognised within the consolidated income statement in 'Credit losses on financial assets'.

IFRS 9 ECL reflects an unbiased, probability-weighted estimate based on loss expectations resulting from default events either over a maximum 12-month period from the reporting date, or over the remaining life of a financial instrument. The Group calculates lifetime ECLs and 12-month ECLs either on an individual basis or a collective basis, depending on the nature of the underlying portfolio of financial instruments.

The Group calculates ECLs based on three-weighted scenarios to measure the expected cash flow shortfalls, discounted at an approximation to the EIR as calculated at initial recognition. A cash flow shortfall is the difference between the cash flows that are due in accordance with the contract and the cash flows expected to be received.

The Group calculates ECL using the following three components:

- exposure at default (EAD),
- probability of default (PD), and
- loss given default (LGD).

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

9.2 Non-performing exposures

The tables below disclose NPEs based on the definitions of the EBA standards. The definition of credit impaired loans (Stage 3) is aligned to the EBA NPEs definition. As per the EBA standards and ECB Guidance to Banks on Non-Performing Loans (NPLs) (which was published in March 2017), NPEs are defined as those exposures that satisfy one of the following conditions:

- (i) The borrower is assessed as unlikely to pay its credit obligations in full without the realisation of the collateral, regardless of the existence of any past due amount or of the number of days past due.
- (ii) Defaulted or impaired exposures as per the approach provided in the CRR, which would also trigger a default under specific credit adjustment, diminished financial obligation and obligor bankruptcy.
- (iii) Material exposures as set by the CBC, which are more than 90 days past due.
- (iv) Performing forbore exposures under probation for which additional forbearance measures are extended.
- (v) Performing forbore exposures previously classified as NPEs that present more than 30 days past due within the probation period.

Exposures are classified as forbore when concessions are made to debtors who are facing or about to face financial difficulties and cannot meet their contractual obligations (Section 9.4).

Non-performing forbore exposures cease to be considered as NPEs and in such case are transferred out of Stage 3, only when all of the following conditions are met:

- (i) The extension of forbearance measures does not lead to the recognition of impairment or default.
- (ii) A period of one year has passed since the latest of the following events:
 - a) The restructuring date
 - b) The date the exposure was classified as non-performing
 - c) The end of the grace period included in the restructuring arrangements
- (iii) Following the forbearance measures and according to the post-forbearance conditions, there is no past due amount or concerns regarding the full repayment of the exposure.
- (iv) No Unlikely-to-Pay criteria exist for the debtor.
- (v) The debtor has made post-forbearance payments of a non-insignificant amount of capital (different capital thresholds exist according to the facility type).

Non-performing non-forbore exposures cease to be considered as NPEs only when all of the following conditions are met:

- (i) At least three months have passed since the date that the conditions for which the exposure was classified as non-performing cease to be met, and within these three months there are no default triggers, and
- (ii) During the three-month period, the behaviour of the obligor should be taken into account, i.e. there are no arrears/excesses and instalments are being repaid normally, and
- (iii) During the three-month period, the financial situation of the obligor should be taken into account, i.e. the financial situation of the obligor has improved, and
- (iv) During the three-month period an Unlikely to Pay criteria assessment is carried out and it is assessed that the obligor can fulfil their obligations without resorting to the liquidation of collateral and there are no other Unlikely-to-Pay criteria, and
- (v) The obligor does not have any amount past due by more than 90 days.

When a loan facility exits Stage 3, it is transferred to Stage 2 for a probationary period of 6 months. At the end of this period, the significant increase in credit risk (SICR) assessment is performed by comparing the PD at the reporting date with the PD at initial recognition and if PD is assessed to have deteriorated beyond the set thresholds, the loan remains in Stage 2, otherwise the loan is transferred to Stage 1. The reversal of previous unrecognised interest on loans and advances to customers that no longer meet Stage 3 criteria is presented in 'Credit losses to cover credit risk on loans and advances to customers' within 'Credit losses on financial assets'.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

9.2 Non-performing exposures (continued)

As at 31 December 2025, no portfolio of loans and advances to customers was classified as held for sale (2024: a portfolio of loans and advances to customers, known as 'Project River', was classified as held for sale. The disposal portfolio comprised mainly of corporate and retail exposures under the Restructuring & Recoveries business line. The sale transaction was completed during the first half of the year ended 31 December 2025).

During the year ended 31 December 2025, the Group entered into an agreement with Cerberus Global Investments B.V. to sell a non-performing loans portfolio ('Project River 4') with a total gross book value of approximately €35 million as at 30 September 2025 (the 'Sale transaction'). The Sale transaction was completed in December 2025. The disposal portfolio comprised mainly of retail exposures under the Restructuring & Recoveries business line.

The tables below include loans and advances to customers at amortised cost classified as held for sale and loans and advances to customers measured at FVPL.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

9.2 Non-performing exposures (continued)

NPEs as defined by the EBA were reduced to €127 million as at 31 December 2025 compared to €202 million (excluding loans and advances classified as held for sale) as at 31 December 2024. As a result, the NPEs reduced to 1.2% of gross loans (excluding loans and advances to central banks, credit institutions and reverse repurchase agreements) as at 31 December 2025, compared to 2.0% as at 31 December 2024.

Collateral obtained by taking possession

In the context of its loan restructuring activities, the Group hold properties in exchange for the settlement of its customers' borrowings. The Real Estate Management Unit (REMU) is focused on the disposal of on-boarded properties resulting from debt for asset swaps.

During the year ended 31 December 2025, REMU completed disposals of €264 million in book value resulting in a net gain on disposal of approximately €12 million, compared to disposals of €175 million during the year ended 31 December 2024, at a net gain of €1 million.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

9.3 Credit Risk Adjustments

9.3.1 ECL of Loans and Advances to Customers

The Group incorporates forward-looking information into ECL by applying three macroeconomic scenarios—baseline, adverse and favourable—weighted 50%, 30% and 20% respectively. These scenarios influence PD and LGD through regression-based modelling and forward-looking collateral valuations. Scenario weights are derived from historical GDP distributions and severity analysis, with forecasts prepared by the Economic Research Department using external data sources. Assumptions and overlays are reviewed regularly by Risk Management and approved through the Group’s governance framework.

Individually assessed loans

The individual assessment is performed not only for individually significant performing and non-performing exposures, but also for other exposures meeting specific criteria and thresholds determined by Credit Risk Management. A risk-based approach is used on the selection criteria of the individually assessed population which include, among others, forbore exposures, exposures with significant decrease in the yearly credit turnover and/or in assigned collaterals. Also, significant Stage 1 exposures within sectors assessed by Credit Risk Management to be highly impacted by one or more factors or events (such as a global or local economic/market/regulatory/geopolitical development) are assessed for potential increase in credit risk and significant exposures that have transitioned to Stage 2 from Stage 1 are assessed for potential indications of unlikeliness to pay.

The ECL for individually assessed stage 3 assets is calculated on an individual basis and all relevant considerations of the expected future cash flows are taken into account (for example, the business prospects for the customer, the realisable value of collateral, the Group’s position relative to other claimants, the reliability of customer information and the likely cost and duration of the work out process).

Collectively assessed loans

All customer exposures that are not individually assessed are assessed on a collective basis. For the purposes of calculating ECL, exposures are grouped into granular portfolios/segments with shared risk characteristics. The granularity is based on different levels of segmentation which, among other factors include customer type, exposure class and portfolio type. The granularity for the IFRS 9 segments is aligned with the Internal Rating Based (IRB) segmentation of the CRR.

In accordance with Article 1(2) Commission Delegated Regulation (EU) No. 183/2014 the criteria for the distinction between General Credit Risk Adjustments and Specific Credit Risk Adjustments has to be that general provisions are freely available to meet losses which subsequently materialise. In addition, amounts included in the calculation of General Credit Risk Adjustments should be fully available, as regards to timing and amount, to meet such losses, at least on a gone-concern basis. The Group concluded that both credit risk adjustments from individually and collectively assessed loans, are Specific Credit Risk Adjustments.

Financial guarantees and commitments	2	(1)
	34	32

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

9.4 Forbearance/Restructuring

Forborne/restructured loans and advances are those loans and advances that have been modified because the borrower is considered unable to meet the terms and conditions of the contract due to financial difficulties. Taking into consideration these difficulties, the Group decides to modify the terms and conditions of the contract to provide the borrower with the ability to service the debt or refinance the contract, either partially or fully. They include the facilities for which the Group has modified the repayment programme (e.g. provision of a grace period, suspension of the obligation to repay one or more instalments, reduction in the instalment amount and/or elimination of overdue instalments relating to capital or interest).

The practice of extending forbearance/restructuring measures constitutes a grant of a concession whether temporarily or permanently to that borrower. A concession may involve restructuring the contractual terms of a debt or payment in some form other than cash, such as an arrangement whereby the borrower transfers collateral pledged to the Group.

For an account to qualify for forbearance/restructuring it must meet certain criteria including the viability of the customer. The extent to which the Group reschedules accounts that are eligible under its existing policies may vary depending on its view of the prevailing economic conditions and other factors which may change from year to year. In addition, exceptions to policies and practices may be allowed in specific situations to comply with legal or regulatory requirements.

Forbearance/restructuring activities may include measures that restructure the borrower's business (operational restructuring) and/or measures that restructure the borrower's financing (financial restructuring).

Forbearance/restructuring options may be of a short or long-term nature or a combination thereof. The Group has developed and deployed sustainable restructuring solutions, which are suitable for the borrowers and acceptable for the Group.

Short term restructuring solutions are defined as restructured repayment solutions of duration of less than two years. In the case of loans for the construction of commercial property and project finance, a short-term solution may not exceed one year.

All forborne loans are classified as Stage 2 or Stage 3, if they are considered to be credit impaired. The loans forborne continue to be classified as Stage 3 in the case they are performing forborne exposures under probation for which additional forbearance measures are extended, or performing forborne exposures, previously classified as NPEs that present more than 30 days past due within the probation period.

Forbearance modifications of loans and advances that do not affect payment arrangements, such as restructuring of collateral or security arrangements, are not regarded as sufficient to categorise the facility as credit impaired, as by themselves do not necessarily indicate credit distress affecting payment ability such that would require the facility to be classified as NPE.

The forbearance characteristic contributes to two specific ways for the calculation of lifetime ECL for each individual facility. Specifically, it is taken into consideration in the scorecard development, where, if this characteristic is identified as statistically significant, it affects negatively the rating of each facility. It also contributes to the construction through the cycle probability of default and cure curves, where, when feasible, a specific curve for the forborne products is calculated and assigned accordingly.

The forborne loans classification is discontinued when all EBA criteria for the discontinuation of the classification as forborne exposure are met. The criteria are set out in the EBA Final draft Implementing Technical Standards (ITS) on supervisory reporting and non-performing exposures.

		2025	2024
		€ million	€ million
010	Loans and advances that have been forborne more than twice	124	116
020	Non-performing forborne loans and advances that failed to meet the non-performing exit criteria	13	19

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

9.5 Exposures in Equities in the Banking Book

The Group holds certain legacy equity securities and certain equity securities obtained from customers in satisfaction of debt. The intention, in line with an ALCO decision, is to run this portfolio down.

Listed equity securities are measured at fair value, being the market value of these securities on a recognised stock exchange. Unlisted securities are also measured at fair value, which is determined using valuation models with inputs from both, market observable data and non-observable data. These models are periodically reviewed by qualified personnel.

Model inputs for valuation

Observable inputs to the models for the valuation of unquoted equity and debt securities include, where applicable, current and expected market interest rates, market expected default rates, market implied country and counterparty credit risk and market liquidity discounts.

The Group irrevocably made the election to classify its equity investments as equity investments at FVOCI on the basis that these are not held for trading. Equity investments at FVOCI comprise mainly investments in private Cyprus registered companies, acquired through loan restructuring activity and specifically through debt for equity swaps.

The carrying value of the Group's equity securities, per the accounting scope consolidation, at 31 December 2025 at FVOCI amounts to €10 million (2024: €9 million) and at FVPL €6 million (2024: €1 million) and it is equal to their fair value, analysed as follows:

	2025	2024
	€ million	€ million
Listed on other stock exchanges	6	1
Unlisted	10	9
Total	16	10

During the year ended 31 December 2025, no holdings of equity investments measured at FVOCI have been disposed of (2024: c€1 million).

9.6 Exposures to Shadow Banking entities

Shadow Banking Entities (SBEs) are identified through a qualitative assessment conducted as part of customer onboarding and periodic reviews. For entities classified within predefined institutional sectors, three qualitative criteria are applied to determine whether the entity:

- engages in bank-like credit intermediation activities,
- is subject to regulatory or supervisory oversight, and
- is operationally active.

The Bank applies a conservative approach to SBEs. As a general principle, financing should be avoided. In exceptional cases where financing is considered, such cases are escalated to higher approving authorities. Exposures are subject to specific limits in line with the Concentration Risk Policy, which are monitored on an ongoing basis and aligned with the applicable regulatory requirements.

As of 31 December 2025, the Group's exposure to such entities remained limited, with three entities reported and a total original exposure of approximately €0.7 million.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

10. Asset Encumbrance

Asset encumbrance arises from collateral pledged against secured funding and other collateralised obligations.

An asset is classified as encumbered if it has been pledged as collateral against secured funding and other collateralised obligations and, as a result, is no longer available to the Group for further collateral or liquidity requirements. An asset is classified as unencumbered if it has not been pledged as collateral against secured funding and other collateralised obligations.

The regulatory consolidation scope used for the purpose of the disclosures on asset encumbrance in the Report is in line with the scope retained for the application of the liquidity requirements on a consolidated basis as defined in Chapter 2 of Title I of Part Two CRR, which is used to define (E) High Quality Liquid Assets (HQLA) eligibility. There is no intragroup encumbrance, nor any encumbrance of assets or source of encumbrance by any significant currencies other than the reporting currency.

Asset encumbrance indicator is part of the Liquidity Limit Framework as well as the Public Funding Policy and Collateral Management Policy. It is used as a management indicator and not as a critical limit. It is a Recovery Plan Early Warning Indicator and an LCP Early Warning Indicator. It provides a signal that the management can combine with other indicators and tools to decide if any action is deemed necessary. It also ensures that no excessive assets encumbrance occurs without a justified reason. The ratio is monitored quarterly.

All tables below are based on EBA reporting templates pertaining to Asset Encumbrance under CRD. The values presented, including totals, are median values based on quarter end point-in-time (PiT) figures covering the years ended 31 December 2025 and 31 December 2024.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

10.1 Encumbered and Unencumbered Assets by Asset Type (continued)

Encumbered assets include cash and other liquid assets placed with banks (which are included in 'Other assets' c.€0.02 billion as at 31 December 2025 and c.€0.06 billion as at 31 December 2024) as collateral under ISDA agreements which are not immediately available for use by the Group but are released once the transactions are terminated. Cash is mainly used to cover collateral required for (i) derivatives and (ii) trade finance transactions and guarantees issued. It may also be used as part of the supplementary assets for the covered bond.

Encumbered assets primarily consist of loans and advances to customers (which are included in 'Other assets' c.€3.7 billion as at 31 December 2025 and c.€3.5 billion as at 31 December 2024) and investment in debt securities. These are mainly pledged for any potential use of the funding facilities of the ECB and for the covered bond.

Loans and advances to customers include mortgage loans of a nominal amount of €1,002 million as at 31 December 2025 (2024: €1,010 million) in Cyprus, pledged as collateral for the covered bond issued by BOC PCL in 2011 under its Covered Bond Programme. As at 31 December 2025, although there is no outstanding funding from the ECB, housing loans of a nominal amount of €2,632 million (2024: €2,431 million) in Cyprus, remain in the collateral pool of the CBC part of the available credit line. It is noted that this ECB scheme which accepts housing loans as eligible collateral was terminated by ECB on 30 March 2026.

BOC PCL maintains a Covered Bond Programme set up under the Cyprus Covered Bonds legislation and the Covered Bonds Directive of the CBC. Under the Covered Bond Programme, BOC PCL has in issue covered bonds of €650 million secured by residential mortgages originated in Cyprus. The covered bonds have a maturity date of 12 December 2026 and pay an interest rate of 3-months Euribor plus 1.25% on a quarterly basis. On 9 August 2022, BOC PCL proceeded with an amendment to the terms and conditions of the covered bonds following the implementation of Directive (EU) 2019/2162 in Cyprus. The covered bonds are listed on the Luxemburg Bourse and have a conditional Pass-Through structure. All the bonds are held by BOC PCL. The covered bonds are eligible collateral for the Eurosystem credit operations and are placed as collateral for accessing funding from the ECB.

The vast majority of encumbered assets are within the Bank.

Unencumbered assets which can potentially be pledged include debt securities and Cyprus loans and advances which are less than 90 days past due. Balances with central banks are reported as unencumbered and can be pledged, to the extent that there is excess available over the minimum reserve requirement. The minimum reserve requirement is reported as unencumbered not readily available to be pledged.

Unencumbered assets that are not readily available to be pledged primarily consist of loans and advances which are prohibited by contract or law to be encumbered or which are more than 90 days past due or for which there are pending litigations or other legal actions against the customer, a proportion of which would be suitable for use in secured funding structures but are conservatively classified as not readily available to be pledged as collateral. Properties whose legal title has not been transferred to the Company, or a subsidiary are not considered to be readily available to be pledged as collateral.

As at 31 December 2025, the Group has €23.6 billion of unencumbered assets. Included in this amount are other assets of €18.5 billion which consist mainly loans and advances to customers, loans on demand, intangible assets, tax assets, fixed assets and derivative assets. Additionally, included in this amount are assets of €3.8 billion which would not be deemed available for encumbrance in the normal course of business.

Sovereign ratings

The sovereign risk ratings of the Cypriot government have improved significantly in recent years, reflecting reduced banking sector risks, improved economic resilience and consistent fiscal outperformance. Cyprus has demonstrated policy commitment to correcting fiscal imbalances through reform and restructuring of its banking system.

In November 2025, S&P Global Ratings raised Cyprus’ outlook to positive from stable and affirmed its long-term local and foreign currency sovereign credit ratings to ‘A-’. The revision of the outlook primarily reflects the potential for Cyprus’ external debt position to strengthen over the next few years, driven by public and private external deleveraging as well as continuously high services exports. The agency also notes the improved fiscal performance and that consumption will continue to benefit from a healthy labour market and strong real income growth.

Similarly, also in November 2025, Fitch Ratings raised Cyprus’ outlook to positive from stable keeping the long-term foreign currency issuer default rating to A-. The affirmation of Cyprus’ rating reflects the continued positive fiscal developments, income per capita levels above the A median, and policy credibility supported by EU and eurozone membership, as well as the growth outlook and the improvements in the financial sector.

Moody's Investors Service affirmed in November 2025 the long-term issuer and senior unsecured ratings of the Government of Cyprus to A3, with a stable outlook. As the rating agency mentions, this reflects the significant economic resiliency and robust medium-term growth prospects, good institutional capacity and effective policymaking and the positive debt trend and solid debt affordability metrics.

DBRS Ratings GmbH (DBRS Morningstar) upgraded Cyprus’ Long-Term Foreign and Local Currency – Issuer Ratings to A from A (low) in September 2025, after an upgrade in May, with a stable trend. The rating agency notes that the upgrade reflects the sharp decrease of the public debt burden in recent years and the agency’s expectation that public debt metrics will continue to materially improve over the next years. This is further supported by a stable political environment and a comparatively strong pace of economic growth.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

11. Credit Risk Under the Standardised Approach

CRR III/CRD framework applicable from 1 January 2025, introduced significant changes to the calculation of risk weighted assets across key categories and established an output floor, while also strengthening supervisory and governance requirements.

The Group applies the Standardised Approach, as amended to calculate the RWA in accordance with the requirements laid down in Part 3, Title II Chapters 2 and 4 of the CRR illustrated in the tables below under this section.

Certain elements of the new framework are subject to transitional arrangements and phased implementation. The Group's regulatory ratios reported are under provisions of Articles 495a, 495b, 495d and 500a of the Capital Requirements Regulation (CRR)

CRR III removed the exposure class "items associated with particularly high risk", which applied under the previous framework, and introduced new, more granular exposure classes, including subordinated debt exposures and acquisition, development and construction (ADC) exposures, alongside a refined treatment of real estate related exposures.

The ECAI applied by the Group in the RWA calculation is Moody's in line with the up-to-date standard association published by the EBA. The transfer of the issuer and issue credit ratings onto comparable asset items not included in the trading book are applied in line with articles 135 to 141 of the CRR.

The asset classes for which ECAI ratings are used are as follows:

- Central governments or central banks
- Regional government or local authorities
- Public sector entities
- Institutions
- Corporates
- Institutions and corporates with short-term credit assessment.
- Covered Bonds

As of 28 June 2021, the amending regulation 2019/876 of the CRR, CRR II has been fully applied in line with the regulatory implementation dates in respect of the Credit Risk RWA calculations. The major change in Standardised Approach for Credit Risk is the calculation of RWA on exposures in the form of units or shares in Collective Investment Undertakings (CIUs) whereby the below three approaches have been introduced:

- Look-through approach
- Mandate approach
- Fall-back approach

The Group has applied the Mandate approach in all its positions in the form of shares or units in CIUs where the RWA are calculated based on the underlying assets and limits of each CIU mandate in which the Group has invested in. The RWA impact for the Group from the application of the new methodology was immaterial due to the very small size of the CIU exposures held by the Group.

The Group applies the Standardised Approach for Counterparty Credit Risk (SA-CCR) in calculating the exposure values for derivative transactions used in the RWA for counterparty credit risk and Credit Valuation Adjustment (CVA). Under this approach laid down in Part 3, Title II Chapter 6 of the CRR, the exposure values are calculated taking into account margin and netting agreements. Derivative RWA for the Group remain non material.

For the year ended 31 December 2025, on and off-balance sheet exposures increased by €1,451 million while RWAs decreased by €19 million.

The main driver for the increase in total exposure is the increase in customer advances and Investments mitigated by a decrease in other assets related exposures (such as stock of properties).

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

11. Credit Risk Under the Standardised Approach (continued)

Total Risk weighted assets decreased during the year, the main driver being the decrease in operational risk RWAs and to a lesser extent in credit risk RWAs following implementation of CRR III, as well as the overall decrease in "Other assets" related exposures (such as stock of properties) partly offset by the above-mentioned increase in customer advances and Investments

The table below illustrates the effect of CCF and CRM techniques on exposure values that give rise to credit risk applied in accordance with the CRR.

The exposure amounts displayed in table below are after the application of value adjustments. Value adjustments refer to specific credit risk adjustments, additional value adjustments to reflect the fair value of the asset where relevant and other own funds reductions related to specific asset items. CCF refers to the credit conversion factors applied to off-balance sheet exposures to convert them to credit equivalents in line with article 111 of the CRR. CRM refers to the credit mitigation techniques applied. The CRM of the Group refers to eligible financial collateral that is used to decrease the exposure values through the application of the Financial Collateral Comprehensive Method and the eligible credit protection where the exposure RW or exposure class are substituted by the corresponding RW and exposure class of the credit protection provider.

Eligible real estate collateral on which the Group has concentration is included in the exposure classes "Secured by mortgages on immovable property" for performing exposures and form part of "Exposures in default" for non-performing exposures.

RWAs density is a synthetic metric on the riskiness of each portfolio, and it is measured by dividing (e) RWA with the sum of columns (c) and (d) Exposure Value after CCF and CRM.

Risk weight 250%	77	-	250	77	192	
Total	93	-		93	213	

EU CVA 1 – Credit valuation adjustment risk under the Reduced Basic Approach (R-BA)

Credit Valuation Adjustment (CVA) risk represents the potential loss arising from movements in the credit valuation adjustment, which reflects counterparty credit risk embedded in derivative and similar transactions. The Bank does not maintain a trading book, and the derivative positions currently held are solely for hedging purposes. All derivative exposures with counterparties are governed by the Credit Support Annex (CSA) agreement that provides legally enforceable netting and daily margining. In light of these factors, CVA risk is assessed as immaterial for the Bank and is therefore neither measured nor actively managed.

31 December 2025		a	b
		Components of Own Funds Requirements	Own funds requirements
		€ 000	€ 000
1	Aggregation of systematic components of CVA risk	346	
2	Aggregation of idiosyncratic components of CVA risk	145	
3	Total		139

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

12. Market Risk

There are no minimum capital requirements for market risk for 2025 or 2024. FX risk does not require any capital since the materiality threshold set by Article 351 of the CRR is not met. Other than the foreign exchange risk, the Group does not hold any trading book positions that would fall under Title VI of the CRR.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

13. Operational Risk

The minimum capital requirement for operational risk is calculated in accordance with Title III: Own funds requirements for operational risk of the CRR. CRR III introduced a new approach for calculating operational risk capital requirements which is a single, non-model-based approach that has replaced all previous methods

20	NSFR ratio (%)	171%	169%	169%	160%	162%

Notes:

1. Amounts and ratios include profits for the year ended 31 December 2025 net of a deduction for a distribution in respect of 2025, following relevant recommendation by the Board of Directors to the shareholders for a final cash dividend of €218 million, as disclosed in subsection 'Distributions' of Section 5.1 CRD Regulatory Capital.
2. Amount and ratios do not include quarterly profits for the three months ended 30 September 2025. Including the quarterly profits and an accrual for a distribution at a payout ratio of 70% of the Group's adjusted profitability for the period, which represents the top-end range of the Group's approved distribution policy in line with the principles of Commission Delegated Regulation (EU) (241/2014) for foreseeable dividends and charges, the CET1 ratio and Total Capital ratio stood at 20.5% and 25.4% respectively, on a transitional basis.
3. Amounts and ratios include reviewed profits for the six months ended 30 June 2025 in line with the ECB Decision (EU) (2015/656) on the recognition of interim or year-end profits in CET1 capital in accordance with Article 26(2) of the CRR and an accrual for a distribution at a payout ratio of 70% of the Group's adjusted recurring profitability for the period, which represents the top-end range of the Group's approved distribution policy in line with the principles of Commission Delegated Regulation (EU) (241/2014) for foreseeable dividends and charges.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

14. Key Metrics (continued)

4. Amounts and ratios do not include quarterly profits for the three months ended 31 March 2025. Including the quarterly profits and an accrual for a distribution at a payout ratio of 70% of the Group's adjusted profitability for the period, which represents the top-end range of the Group's approved distribution policy in line with the principles of Commission Delegated Regulation (EU) (241/2014) for foreseeable dividends and charges, the CET1 ratio and Total Capital ratio stood at 19.9% and 25.0% respectively, on a transitional basis.
5. Amounts and ratios include profits for the year ended 31 December 2024 net of a deduction for a distribution in respect of 2024 earnings of €241 million, following relevant recommendation by the Board of Directors to the shareholders for a final cash dividend of €211 million and approval by the Board to undertake a share buyback of ordinary shares of the Company for an aggregate consideration of up to €30 million and in compliance with the terms of the ECB approval.

During the year ended 31 December 2025, the regulatory CET1 ratio was mainly affected by the pre-provision income, provisions and impairments, the payment of AT1 coupon, other movements and the decrease in risk-weighted assets primarily as a result of the implementation of CRR III. The CET1 ratio was also impacted by the deductions for distribution in respect of 2025 earnings and charges in line with the applicable framework as disclosed in subsection 'Distributions' of Section 5.

Total Risk weighted assets decreased during the year, the main driver being the decrease in operational risk RWAs and to a lesser extent in credit risk RWAs following implementation of CRR III, as well as the overall decrease in "Other assets" related exposures (such as stock of properties) partly offset by the increase in customer advances and Investments.

During the second quarter of 2025, the CET1 ratio was negatively affected by the payment of AT1 coupon.

As a result of the above, the CET1 ratio has increased by 180 bps during the year ended 31 December 2025.

During the year ended 31 December 2025, the Group's Total Capital ratio increased by 188 bps.

The LCR remained stable during 2025.

As at 31 December 2025 the NSFR stood at 171% compared to 162% as at 31 December 2024. The increase in NSFR is mainly due to the c. €1.7 billion increase in customer deposits which caused an increase of c. €1 billion in Available Stable Funding. The Required Stable Funding remained largely unchanged.

The increase in Total Assets during the year has been the main driver for the decrease in leverage ratio which stands well above the regulatory minimum requirement of 3%.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

15. Exposure to Interest Rate Risk on Positions in the Banking Book

15.1 Nature of the Interest Rate Risk and Key Assumptions

Interest Rate Risk in the Banking Book refers to the current or prospective risk to the Bank's capital and earnings arising from adverse movements in interest rates that affect the Bank's banking book positions. Moreover, optionality embedded in the Bank's products may give rise to interest rate risk.

In order to control/quantify/monitor the risk from changes in interest rates, the outcomes of two types of analysis are calculated:

- a. Impact on the NII – earnings measure
- b. Impact on the EV – EV measure

In addition to the above two types of measures, interest rate risk for EUR (which consists of the bulk of the Group's balance sheet) is also measured using interest rate gap analysis where the assets, liabilities and off-balance sheet items are classified according to their remaining repricing period.

Impact on NII is measured assuming that the composition of the Banking Book remains the same (static balance sheet). As per the analysis undertaken for the preparation/update of the Interest Rate Risk assumptions and methodologies, no prepayment models are used due to:

1. the immaterial amount of loans subject to prepayment risk. As per the Mortgage Credit Directive (voted in April 2017) the Bank is allowed to charge the interest rate cost, in case the customer repays early (instead of only admin charge) for all new mortgage loans irrespective of the loan amount and with no retrospective effect. Furthermore, the analysis performed by the Bank for the portfolio before the 2017 aforementioned legislation, indicates that loans subject to prepayment risk on which no interest rate cost can be charged are decreasing to immaterial amounts close to 0% of the total positions referred to Article 2(2) of RTS on Standardised methodologies on IRRBB. Thus, no prepayment modelling is required. Prepayment of loans will be assessed for modelling only if the percentage of loans (not in Recoveries) for which no penalty can be charged over the total loans is greater than 5% of total assets in line with Article 8 of EBA/RTS/2022/09.
2. the low level of fixed deposits that allow withdrawals without a penalty charge. Based on the latest analysis, the amount of the deposits with early withdrawal option amounted to 0.27% of the total positions referred to Article 2(2) of RTS on Standardised methodologies on IRRBB. Thus, no early withdrawal modelling is required.

It is noted that the Bank may, at its discretion allow its customers to prepay their loans. However, in the case of loan prepayments, penalty charges can apply for fixed rate loans, to cover any associated cost.

The level of prepayment risk is measured and reviewed at least on an annual basis.

Treatment of Non-Maturing Deposits

Non-Maturing Deposits (NMDs) are liabilities which are free to be withdrawn at any time since they have no contractually agreed maturity date. Historically, NMDs proved to be stable, even when market rates change. Any interest rate paid on these deposits is usually lower than that paid on other sources of funding. The core* deposit assumptions and the maturity profile of these accounts are modelled. It is noted that the assumed maturity profile for all categories is constrained to the tenor limits in line with the EBA guidelines.

*Core deposits are those balances of NMDs that would remain in place with high probability, based on historical evidence. Statistical analysis indicates that these accounts are unlikely to reprice even under significant changes in interest rates.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

15.1 Nature of the Interest Rate Risk and Key Assumptions (continued)

Maturity profile assumptions vary according to depositor characteristics (e.g. retail, wholesale non-financial, wholesale financial) and account characteristics (e.g. transactional or non-transactional).

The longest repricing maturity assigned to NMDs is 10 years whereas the average repricing maturity is estimated to be close to the 5-year cap.

Floor on Deposits

All deposit categories are assumed to have a 0% interest rate floor, given that it would be unlikely for the Bank to offer negative deposit rates. However, during the negative interest rate period, the Bank charged a liquidity fee to certain legal entities. As a result, even though all deposit categories were assumed to have a 0% floor, there was NII benefit in case of decrease in rates arising from accounts in which the liquidity fee was applicable. Given the increasing interest rate environment leading to positive interest rates, liquidity fee is no longer charged.

Notice Accounts

In the case of decrease in interest rates, notice accounts, are assumed to have a time lag due to the requirement by PSD to give a 75 days' notice to its clients. This means that the impact of interest rate decrease of these accounts is delayed due to this time lag.

Beta of Bank Base Rate Loans, Fixed Deposits and Notice accounts

It is noted that the EUR Bank base rate loans (referenced mainly to the CBC deposit index) have high correlation to the changes of the fixed deposits and notice account rates. It is noted that Bank base rate loans reprice quarterly and are directly linked to the CBC benchmark rate which is lagged by 2 months compared to the current month. Based on statistical evidence, the sensitivity of CBC index to the Bank's EUR Fixed Deposits and Notice accounts is estimated at 85% in case of increasing rates and 100% in case of decreasing rates. The relationship of the fixed and notice deposit rates to market rate changes is aligned with the Financial Plan.

Floor on Loans

For existing loans, a floor of 0% on the reference rate is applied only where there is a contractual agreement in place. All new loans have a floor of 0% on the reference rate, given that such a condition is included in all new loan contracts.

Treatment of Equity

Equity does not impact the EV or NII calculations of the Bank.

Interest Rate scenarios

The interest rate risk scenarios selected by the Bank consider:

1. Up and down parallel shifts in the yield curve of varying magnitude based on statistical analysis of past interest rates shifts
2. Changes in the yield curve shape (flattening, steepening, short up and down etc.)

It is noted that different interest rate scenarios apply to exposures in different currencies that account more than 5% of either banking book assets or liabilities. Currencies with less than 5% are included until the sum of assets or liabilities included in the calculation is at least 90%. No change in NII and EV is calculated for the rest of the currencies. The significant currencies of the Bank are currently EUR and USD.

The Interest Rate Effect under the BASEL scenarios (in line with the scenarios presented in the BCBS April 2016 paper) are produced on a quarterly basis.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

15.1 Nature of the Interest Rate Risk and Key Assumptions (continued)

Stress Testing and standardised interest rate shock scenarios as specified in Basel Committee on Banking Supervision are performed on a quarterly basis. The standard regulatory shock which involves sudden +/- 200 basis points change of the yield curve (Supervisory Outlier Test as per EBA/RTS/2022/10) is calculated on a monthly basis.

Internal scenarios are performed on a monthly basis and are subject to internal limits. The market rate shocks for EUR and USD, which are the currencies corresponding to the bulk of the Bank's balance sheet items are indicated below:

EUR:

Parallel UP: + 135 bps Parallel DN: - 100 bps,
Steepening: 1 day:-100 bps & 360 mons: 135 bps,
Flattening: 1 day: +135 bps & 360 mons: -100 bps,
Short UP: 1 day: +135 bps & 360 mons: 0 bps,
Short DN: 1 day: -100 bps & 360 mons: 0 bps.

USD:

Parallel UP: +160 bps, Parallel DN: -100 bps,
Steepening: 1 day:-100 bps & 360 mons: 160 bps,
Flattening: 1 day: +160 bps & 360 mons: -100 bps,
Short UP: 1 day: +160 bps & 360 mons: 0 bps,
Short DN: 1 day: -100 bps & 360 mons: 0 bps.

The above shocks were calculated using statistical analysis of historical interest rates.

A floor of 0% to all loans with a contractual floor agreement and to all deposits is applied to all scenarios.

15.2 Impact of Downward and Upward Rate Shocks

The ALCO recommends the policy and limits on the maximum allowable interest rate risk in the banking book, which are then approved by the Board. The exposure is described below.

Movements in interest rates affect the Bank's banking book positions and can pose a risk to the Bank's EVE and NII. When interest rates change, the present value and level of future cash flows change. This in turn changes the underlying value of a Bank's assets, liabilities and off-balance sheet items and hence its EVE. Changes in interest rates also affect a Bank's NII by altering interest rate-sensitive income and expenses. The NII and EVE measures are considered of complementary nature (a transaction subject to interest rate risk cannot stabilize both NII and EVE at the same time). The bulk of the Bank's EVE and NII exposure arises from the customer advances, customer deposits, bond investments (securities), bond issuances, Central Bank Balances and interest rate derivatives.

EU IRRBB1 - Interest rate risks of non-trading book activities

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

16. Environmental, Social and Governance Risks

16.1 Environmental risk

16.1.1 Business strategy and processes

16.1.1.1 Business strategy to integrate environmental factors and risks

As a signatory to the UN PRB, the Group aims to align its own operations, supply chain and portfolios with the transition to a sustainable economy. This commitment was enforced through the Group’s ESG primary ambitions, as determined in the ESG strategy, which was formulated in 2021. The Group’s primary ESG ambitions are:

Group’s ESG Primary ambitions	
Ambition	Description
Own operations 42% GHG emission reduction by 2030	The Group aims to become carbon-neutral in own operations by 2050, by gradually eliminating its scope 1 and 2 GHG emissions. The Group has set an interim target in line with carbon-neutrality ambition in own operations to reduce Scope 1 and Scope 2 GHG emissions by 42% (absolute target) by 2030 compared to the baseline of 2021.
Become Net Zero by 2050	The Group’s ambition to become Net Zero, by reducing its Scope 1, Scope 2 and Scope 3 emissions through its supply chain (i.e. third-party providers) and its financing activities, which also entails the alignment and commitment of our customers towards this goal.
Steadily increase GAR	The Group aims to increase GAR. The GAR indicates the degree of alignment with the EU Taxonomy, such as showing the proportion of the share of credit institution’s assets financing and invested in EU Taxonomy-aligned economic activities as a share of total covered assets, such as those consistent with the European Green Deal and the Paris agreement goals. The Group’s GAR as at 31 December 2025 was 0.6% (Turnover based) and 0.6% (CapEx based) as at 31 December 2024 was 0.6% (Turnover based) and 0.3% (CapEx based).
Steadily increase Green Mortgage Ratio	In accordance with the Green Asset Ratio, the numerator consists of mortgages used only for sustainable activities related to the construction of new buildings and renovation of buildings, while the denominator includes all mortgages. The Group has not yet developed EU taxonomy aligned Mortgages, however, aims to launch such an offering in upcoming years.

The Group, in 2025 has established the Environmental Management Policy which provides guidance to the Group on how to actively promote environmental sustainability in own operations through ongoing identification, management and improved efficiency of environmental impacts associated with the Group’s business activities, namely: energy management, adaptation measures, use of resources, renewable energy, recycling and waste management and procurement decisions. The Group has implemented and plans to implement several actions, on owned buildings and branches, aiming to mitigate material negative impacts on climate change mitigation, climate change adaptation, energy efficiency and renewable energy deployment.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.1 Business strategy to integrate environmental factors and risks (continued)

The decarbonisation activities conducted the last two years are depicted in the following table. Group's own funds are supporting the implementation of decarbonisation actions. The Group's Financial Plan embeds actions associated with the decarbonization plan for 2026-2028.

Group's Decarbonisation Actions – Own Operations		
	2024	2025
	(€ 000)	(€ 000)
Installation of electric chargers for cars	88	23
Air-conditioning systems replacements	107	21
Roof insulation	88	-
Solar Panels	38	38
Plug in hybrid vehicles	139	303
Electric vehicles	139	-
Lighting replacement	55	115
Total	654	500

In addition, Branch rationalisation associated with the Digital Transformation programme is considered a decarbonization lever as well. The Group is considering the implementation of a large project which is expected to reduce Scope 1 and Scope 2 GHG emissions between 10%-20% compared to 2025 emissions inventory.

Apart from the strategy to reduce GHG emissions associated with its own operations, BOC PCL should design the strategy to mitigate climate-related and environmental risks associated with loan portfolio (i.e. customers) and investment portfolio. BOC PCL is integrating C&E risks into its Business Strategy through the following:

1. Sector limits;
2. Decarbonisation targets;
3. Green/Transition Lending;
4. Sustainable Finance Framework;
5. ESG and Climate considerations in loan pricing.

Sector Limits

Certain sectors are inherently associated with higher transition risks due to the fact that their current operating model is not considered sustainable under a low carbon economy. The fact that the current and prospective regulatory environment is driving us towards that direction, indicates that the entities, operating in carbon intensive sectors, might fail to adopt. Failure to adopt might impact customer's profitability, liquidity, creditworthiness and ultimately their sustainability in the longer term. In order to manage transition risks and be aligned with Net Zero commitment, BOCH established certain sector lending limits to restrict its exposure to sectors which are widely considered as carbon intensive sectors (i.e. cement, oil, gas, iron, steel, aluminium and power generation through fossil fuels). The role of BOCH is to engage with the customers operating in carbon intensive sectors, in order to educate them on the C&E risks that are exposed and support them in the transition to low carbon economy by providing them Green or transition financing. The sector limits are not applicable to Green or Transition financing or to entities, operating in carbon intensive sectors, with an externally validated transition plan so to motivate and support the customers to their transition to a low carbon economy. The abovementioned sector limits have been reflected in the BOCH Concentration Policy.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.1 Business strategy to integrate environmental factors and risks (continued)

Decarbonization targets

The Group aims to work with its customers, colleagues and communities to support their transition to a resilient, low carbon 1.5°C aligned economy by 2050, in line with Cyprus governments' ambitions and actions.

The Group, taking into account the maturity of the market in Cyprus regarding climate change, the available methodologies for setting GHG emission reduction targets and the limited climate data, decided to set its GHG emission reduction targets by applying the International Energy Agency's Below 2 °C climate scenario (IEA B2DS), aiming to limit global warming to 1.75 °C. However, as methodologies evolve and more reliable climate data becomes available, the Group is committed to adjusting its targets to align with the 1.5°C goal. The Group utilized the Science Based Targets Initiative (SBTi) tools to set the GHG emission targets however, these targets are not externally validated by any global climate body. The Group has committed to reducing its scope 1, 2 and 3 GHG emissions to meet its stated targets below:

1. 42% reduction in GHG emissions (Scope 1 and 2) by 2030 compared to a 2021 base year;
2. 43% reduction in residential mortgage portfolio GHG emissions per square meter by 2030 from a 2022 base year.

Green/Transition Lending

The Group, by taking into account the results of Business Environment Scan (BES) and the MA on C&E risks, has set Green /Transition new lending internal KPIs for 2025 in order to support the transition of its customer and Cyprus to a low carbon economy and limit its exposure to transition and physical risks in certain sectors. Specifically, the Group by taking into account the results of the MA on C&E risks, the expected introduction of Green taxation in Cyprus, the amendments adopted on the Energy Performance Directive on buildings as well as the Cyprus Government subsidies identified climate related opportunities and has set Green/Transition new lending internal KPIs on specific sectors (i.e., Manufacturing, Trade, Construction and Accommodation) to enable the Green transition.

The Green/Transition new lending internal KPIs have been included in the Group's Financial Plan for 2026 – 2028 and monitored on a monthly basis by the BDC of the Group. Green / Transition new lending internal KPIs are set on an annual basis during the development of the Group's Financial Plan.

In addition, the Group offers a range of environmentally friendly products to manage transition risk and help its customers become more sustainable. For example, a number of loan products are offered under the Fileco Product Scheme. The Group offers Environmentally friendly Car Hire Purchase addressed to anyone who wants to buy a new hybrid or electric car, providing its customers the opportunity to buy a new electric vehicle and to move away from transport options reliant on fossil fuels. Moreover, an environmentally friendly loan for home renovation is offered to customers who want to renovate and upgrade the energy efficiency of their privately owned primary residence or holiday home and achieve a higher energy efficiency rating. Further, the customers may benefit from an Energy Loan for the installation of energy saving systems for home use. This product is addressed to customers who seek financing for the installation of photovoltaic systems for home use and other home energy saving systems. The Group introduced Green Housing product with variable interest rate and with fixed interest rate, aligned with GLP of LMA, which drives the decarbonisation strategy of Mortgage portfolio. Green housing products provide a discount to customers providing the EPC Category A. The new lending strategy of the Group, embedded in the Financial Plan for 2026-2028, includes the ambition on the new Green Housing product in order be aligned with the GHG emissions reduction target set and manage transition risk. The fact that the Cyprus legislation imposes residential properties to have an EPC A so to issue a planning permit after 1 July 2020 facilitates the process. The Environmentally friendly Gross Loans are not verified by independent body.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.1 Business strategy to integrate environmental factors and risks (continued)

Sustainable Finance Framework

The Group established a Sustainable Finance Framework ('SFF') aiming to improve disclosure and transparency on sustainability and to bring to international investors more opportunities to invest in sustainable developments in Cyprus and Greece. The SFF is designed to support the management of climate change mitigation, adaptation and energy impacts and risks and grasp opportunities through sustainable financing. The Group has set up a Sustainable Finance Framework which will facilitate the issuance of:

- i. Green Bonds/Loans – for which the funds raised are exclusively allocated to Eligible Green Projects
- ii. Social Bonds/Loans – for which the funds raised are exclusively allocated to Eligible Social Projects
- iii. Sustainability Bonds – whereby the funds raised are exclusively allocated to Eligible Green Projects and to Eligible Social Projects

The SFF is aligned with the Green Bond Principles and defines the following core elements:

- i. Use of Proceeds
- ii. Process for Project Evaluation and Selection
- iii. Management of Proceeds
- iv. Reporting

For Use of Proceeds an amount at least equivalent to the net proceeds of any Sustainable Financing Instrument issued by the Group will be allocated to finance new or re-finance, in whole or in part sustainable projects which meet the eligibility criteria of the following Eligible Green and/or Social Project categories. The Project Evaluation and Selection Process ensures that the proceeds of any of the Group's Sustainable Financing Instruments are allocated to new lending or existing projects that meets the criteria set out under the SFF. The Group has established a Sustainable Financing Working Group (SFWG) to carry out the evaluation and selection process.

In addition, it is the BOC PCL's intention to maintain an aggregate amount of Eligible Sustainable Projects that is at least equal to the aggregate net proceeds of all BOC PCL's Sustainable Financing Instrument issuances that are concurrently outstanding under this Framework. In the event that the aggregate value of Eligible Sustainable Projects in the BOC PCL's Eligible Asset Portfolio is less than the total outstanding amount of the BOC PCL's Sustainable Financing Instrument(s), the unallocated surplus funds will be held in line with the Bank's general liquidity management guidelines until allocated to Eligible Sustainable Projects. Eligible projects are:

- a) Renewable Energy (Environmental)
- b) Energy Efficiency (Environmental)
- c) Clean transportation (Environmental)
- d) Green Buildings (Environmental)
- e) Access to Essential Services – Healthcare
- f) Employment Generation and SME financing

For all Sustainable Financing Instrument issuances under this Framework, the Group is committed to providing investors with transparent reporting on the allocation of proceeds towards Eligible Sustainable Projects (Allocation Reporting), as well as to report on the positive environmental and social impacts of those projects (Impact Reporting). The Sustainable Financing Instrument Report will be updated annually, until full allocation of the proceeds of the issued Sustainable Financing Instrument(s).

BOC PCL, in 2024, issued a €300 million green senior preferred notes under the EMTN programme in line with the Group's Beyond Banking approach, aimed at creating a stronger, safer and future-focused bank and leading the transition of Cyprus to a sustainable future. An amount equivalent to the net proceeds of the Notes was allocated during 2025 to eligible green projects as described in the SFF. The Group published the Green Bond – Allocation & Impact Report in April 2025 associated with the above green senior preferred notes.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.1 Business strategy to integrate environmental factors and risks (continued)

ESG and Climate considerations in loan pricing

The Group performed market research to identify the best practices to incorporate ESG and climate considerations in the loan pricing. Following the market research, the Group introduced margin discounts by taking into account the customer's ESG score or the transaction eligibility under Green Lending Policy. A margin discount, based on the client's ESG and climate impact, has been implemented for both new and existing clients on new lending requests, for all clients (all sectors) under Corporate Division, differentiating however between carbon-intensive vs. non-carbon intensive sectors. The Group linked the margin discount at the client level to the borrower's "E" scoring (extracted from borrower's "ESG" score). In addition, the margin discount is linked at the transaction level (i.e. whether lending is Green or not) utilizing the provisions of the Green Lending Policy. This approach aims to incentivize customers to have a better ESG score and obtain green lending in order to be exposed to lower level of climate change transition and adaptation risks.

Principles for Responsible Banking (PRB)

In September 2022, BOC PCL voluntarily conducted an impact analysis, using its loan portfolio, in accordance with the PRB's impact analysis tools. In October 2023, BOC PCL has become the first Bank in Cyprus to sign the United Nations PRB which is a single framework for a sustainable banking industry, developed through a collaboration between banks worldwide and the United Nations Environment Programme Finance Initiative (UNEP FI).

The principles are the leading framework for ensuring that banks' strategies and practices align with the vision society has set out for its future in the UN Sustainable Development Goals and the Paris Climate Agreement. BOC PCL, by signing the principles, commits to be ambitious in its sustainability strategy, working to embed sustainability into the heart of its business, while allowing the Bank to remain at the cutting-edge of sustainable finance.

Under the Principles, BOC PCL should identify and measure the environmental and social impact resulting from its business activities, set and implement targets where it has the most significant impact, and regularly report publicly on their progress. BOC PCL has already measured its environmental and social impact by voluntarily applying the PRB's impact analysis tools in order to identify and report on the material impacts arising from its business activities (i.e. loan portfolio). The next step for BOC PCL is to set at least two targets associated with the PRB's impact areas which can have the most significant impact. For BOC PCL the two key impact areas are Climate Stability and availability, accessibility, affordability & quality of resources and services. BOC PCL has set, in 2023, a decarbonization target on Mortgage portfolio which reflects the first SMART target set on loan portfolio for the Climate stability impact area. For the performance against the decarbonization target on Mortgage refer to Section 16.1.1.2 Objective, targets and limits.

Taking into account the Group's positive impact to customers and society through the Group's financing activities, actions and digital means, it has been decided to set a target associated with financial health and inclusion to measure and demonstrate the Group's positive contribution. The Group decided to set a target on new JOEY accounts to be opened by 2030. JOEY is the Bank of Cyprus' digital banking app and debit card designed specifically for children and teenagers, covering the age range 6-17. It is a youth banking ecosystem that allows minors make transactions (with full parental oversight) and learn money management safely through several features such as setting saving goals, budgeting and money health scoring. More specifically, the Group has set a SMART target to open a total of at least 25,000 new JOEY accounts by 2030 from the total of 8,965 new JOEY accounts opened as of 31 December 2025. The Group aims to promote financial inclusion by bringing underserved groups into the formal financial system as youth under 18 are traditionally excluded from independent banking. In addition, the Group aims to promote financial health by providing and improving the financial literacy, resilience, habits and long-term financial well-being of youth 6-17. The target has been taking into consideration the number of accounts as at 31 December 2025, management expectations on new JOEY accounts projection between 2025-2030, the eligible population in Cyprus (ages 6-17) and assumptions on the Group's market share. The target relates to new accounts created and does not consider the accounts that will be closed in the following years for any reason. The target has been approved by the Board of Directors in March 2026 and is effective from the beginning of 2026 until 2030. As a result, there is no progress to track for 2025. The Group monitors the performance against the target in order to take remedial actions on time through SC, EXCO and NCGC on a quarterly basis through the Sustainability Performance Report

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.1 Business strategy to integrate environmental factors and risks (continued)

Signatories to the Principles take on a leadership role, demonstrating how banking products, services and relationships can support and accelerate the changes necessary to achieve shared prosperity for current and future generations, building a positive future for both people and the planet. These banks also join the world's largest global banking community focused on sustainable finance, sharing best-practice and working together on practical guidance and pioneering tools of benefit to the entire industry.

The endorsement of the PRB by BOC PCL, is fully aligned with and reinforces our strategic priority to become a market leader for sustainable banking and lead the transition of Cyprus to a sustainable future. We aim not only to deliver financial but also environmental and social value to our stakeholders. As such, our approach is multidimensional: to maintain our leading role in supporting Cypriot society; to implement our commitments to these Principles through effective governance and a culture of responsible banking; to reduce our own environmental footprint as well as supporting our customers to reduce their GHG emissions and to continue supporting our staff by providing training and upskilling opportunities as well as staff wellness initiatives.

BOC PCL is committed to the following principles:

1. **Alignment:** BOC PCL will align its business strategy to be consistent with and contribute to individuals' needs and society's goals, as expressed in the Sustainable Development Goals, the Paris Climate Agreement and relevant national and regional frameworks.
2. **Impact & Target Setting:** BOC PCL will continuously increase its positive impacts while reducing the negative impacts on, and managing the risks to, people and environment resulting from our activities, products and services. To this end, BOC PCL will set and publish targets where it can have the most significant impacts.
3. **Clients & Customers:** BOC PCL will work responsibly with its clients and its customers to encourage sustainable practices and enable economic activities that create shared prosperity for current and future generations.
4. **Stakeholders:** BOC PCL will proactively and responsibly consult, engage and partner with relevant stakeholders to achieve society's goals.
5. **Governance & Culture:** BOC PCL will implement its commitment to these Principles through effective governance and a culture of responsible banking.
6. **Transparency & Accountability:** BOC PCL will periodically review its individual and collective implementation of these Principles and be transparent about and accountable for its positive and negative impacts and its contribution to society's goals.

As a means to enhance not only its ESG and climate risk framework but also its ability to identify future opportunities BOC PCL has introduced new ESG questionnaires within its credit granting process. For more details on ESG questionnaires refer to Section 16.1.3.

Group Financial and Business Plan

The Group enhanced the Group Financial and Business Plan manual to ensure the incorporation of C&E risks and considerations in the Business Strategy. Specifically, during the planning phase of new lending the RMD and Investor Relations and ESG Department (IR&ESG) provides the sectors associated with C&E risks, the preliminary impact assessment derived from BES process, science-based targets (GHG emission reduction targets aligned with a climate scenario) set and the direction of Green/Transition new lending based on BES. In addition, each Division, taking into account the preliminary impact assessment (performed by RMD, IR&ESG and Strategy) on risk profile and strategy arising from the BES on C&E risks as well as the MA on C&E risks, identifies which are the material C&E risks over the Financial plan period and defines the actions, strategies and products to mitigate the C&E risks identified. IR&ESG department ensures the adequacy, relevance and reasonableness of the business lines strategies to manage material C&E risks on the main portfolios.

Business Environment Scan (BES)

BOC PCL established and implemented a structured and detailed process, with clear roles and responsibilities, to gather a broad range of updates and developments, both internal and external, and link them with sectors/industries and products/services so to assess their impact, across different time horizons, and identify C&E risks emerging from these updates and developments and inform the Group's risk and strategic profile.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.1 Business strategy to integrate environmental factors and risks (continued)

The BES process facilitates the ongoing monitoring of potential impacts of C&E risks on its business environment across short-, medium- and long-term time horizons. This process involves the systematic monitoring of various news, updates, and developments, including regulatory developments, macroeconomic trends, competitive landscape, technological trends, as well as societal demographic developments and geopolitical updates. As part of the process, the Group collects external information, on a quarterly basis, from various sources, such as news articles, publications, policy and regulatory updates, as well as internal information such as strategy updates, process changes and other relevant internal documentation.

The identified developments are then mapped to the relevant business lines, sectors/industries and portfolios that might be impacted, as well as to specific products/services, where applicable. Developments are further assessed in terms of their relevance across the various time horizons, and preliminary impact scores are assigned based on the expected effect on the Group's risk and strategic profile. Scores range from 0 (No impact) to 5 (Critical impact).

The Group has established a dynamic interaction between the BES and the MA to ensure that the insights from both exercises continually inform and enhance each other. The results of the BES, for 2025, have been considered and informed the RIMA and Business Strategy, particularly developments which have been classified as having a "High" or "Critical".

The preliminary impact assessment of key updates and developments on risk profile and strategy is conducted and reported to the Sustainability Committee and Executive Committee on a quarterly basis. The final impact assessment of key updates and developments on risk profile and strategy is conducted and presented to the Sustainability Committee, Executive Committee, Nominations and Corporate Governance Committee and Risk Committee on an annual basis.

The Group established also a BES working group with specific responsibilities assigned to Compliance Division, Risk Management Division and Strategy Department so to collectively perform the impact assessment arising from key updates and developments on risk profile and strategy.

16.1.1.2 Objectives, targets and limits

The Group in its ESG Strategy focus on the following key ambitions:

- i. Reduction by 42% of GHG emissions from own operations by 2030;
- ii. Become Net Zero by 2050;
- iii. Steadily increase Green Asset Ratio; and
- iv. Steadily increase Green Mortgage Ratio.

The Group has estimated the Scope 1 (Mobile Combustion, Stationary Combustion and Fugitive Emissions) and Scope 2 GHG emissions of 2021 relating to own operations in order to set the baseline for carbon neutrality target, given this was the year the Group's decarbonisation efforts were initiated. For the Group to meet the carbon neutrality target, the Scope 1 and Scope 2 GHG emissions should be reduced by 42% (absolute target) by 2030. The absolute reduction target has been set following the IEA's B2DS and sectoral decarbonisation approach using Science Based target initiative's (SBTi) tool. The decarbonisation target has not been externally assured by relevant climate global bodies, such as SBTi. The target is directly linked with the Group's Environmental Management policy which came into force in November 2025.

The Group's decarbonisation efforts, including actions described in Section 16.1.1.1 lead to the reduction in Scope 1 and Scope 2 GHG emissions by 3,319 tCO₂e in 2025 (2024: 3,431) compared to 2021 which represents 24% reduction (2024: reduction by c.25%). BOCH should perform additional decarbonisation actions to reduce Scope 1 and Scope 2 GHG emissions by c.18% to achieve the interim target of 2030. The reduction in Scope 1 and Scope 2 GHG emissions progress between 2025 and 2024 is primarily due to the incorporation in the estimation the GHG emissions associated with Ethniki Insurance acquired during 2025 and the increase in the emission factor for Scope 2 - purchased electricity emissions.

The energy efficiency actions conducted in 2025 were netted off with the increase in energy consumption due to increase in emission factor for Scope 2 - purchased electricity emissions and due to the acquisition of Ethniki Insurance Cyprus Ltd.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.2 Objectives, targets and limits (continued)

Metric	2021 Base line	Target year	Target	Target reduction	Performance as at 31/12/2025	Figure as at 31/12/2025	Methodology
tCO ₂ eq	13,693	2030	7,942	(42%)	(24%)	10,374	SBTi

The Group's own carbon footprint will continue to be calculated on an annual basis which will enable comparisons to be made and progress against decarbonisation target to be monitored.

The Group monitors the performance against the GHG emission target on own operation through SC, EXCO and NCGC on a quarterly basis through the Sustainability Performance Report.

BOCH completed the acquisition of 100% of Ethniki Insurance Cyprus Ltd on 25 July 2025, following a binding agreement signed with Ethniki Hellenic General Insurance Company S.A. on 14 April 2025. Ethniki Insurance Cyprus has been fully integrated by 31 December 2025 to the Group's insurance companies EuroLife Ltd (EuroLife) and General Insurance of Cyprus Ltd (Genikes Insurance). Following the acquisition of 100% of Ethniki Insurance Cyprus Ltd, the Group assessed whether the baseline of the GHG emission reduction interim target on own operations should be recalculated to reflect GHG emissions of Ethniki Insurance Cyprus Ltd. The Group, following the guidance of GHG Protocol Corporate Standard (2004) on significant thresholds for recalculation, applies a 10% threshold to assess whether a structural change qualifies for baseline recalculation. Following the estimation of Scope 1 and Scope 2 GHG emissions of Ethniki Insurance Cyprus Ltd, for full year 2025, the GHG emissions from Ethniki's own operations in 2025 correspond to 1% of the Group's own operation emissions in 2021 (baseline). Therefore, the baseline of GHG emission reduction target on own operations of the Group has not been recalculated. The Scope 1 and Scope 2 GHG emissions of Ethniki Insurance Cyprus are reflected, on a full year basis, in GHG emissions of the Group as part of EuroLife and General Insurance.

For the purpose of the calculation of the 2025 Carbon footprint, the Group uses the operational GHG accounting approach. The 2025 carbon footprint for Scope 1 and Scope 2 GHG emissions was estimated based on the methodologies described in the Greenhouse Gas Protocol (GHG Protocol) and ISO14064-1:2019 standard.

Aligned with the Group's 2050 Net Zero ambition, the Group joined the Partnership for Carbon Accounting Financials (PCAF) in October 2022 and adopted its recommended methodology for estimating Financed Scope 3 GHG emissions from the Group's investment and lending activities, as well as its insurance contracts. Group's Financed Scope 3 GHG emissions constitute 97% of the Group's total emissions, estimated using the PCAF Standard and proxies. The PCAF Standard, reviewed by the GHG Protocol, aligns with the Corporate Value Chain (Scope 3) Accounting and Reporting Standard for category 15 investment activities. It includes a data quality ranking scale from 1 (highest quality) to 5 (lowest quality), applied to the estimation of emissions for each asset class.

To improve data quality and reduce data gaps, BOCH launched ESG Due Diligence process to gather relevant data and enhanced its loan origination process to gather Energy Performance Certificates (EPCs) for financed and certain collateral properties. Additional data collection actions will be undertaken in 2026 based on the ESG and Climate Data Gap & Strategy. The loan portfolio has been classified into PCAF asset classes to facilitate future decarbonisation target-setting.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.2 Objectives, targets and limits (continued)

PCAF Asset class	Definition
Business loans	Business loans include all loans and lines of credit for general corporate purposes (i.e., with unknown use of proceeds as defined by the GHG Protocol) to businesses, non-profits, and any other structure of organisation that are not traded on a market and are on the balance sheet of the financial institution. Revolving credit facilities, overdraft facilities, and business loans secured by real estate such as CRE-secured lines of credit are also included. Any off-balance sheet loans and lines of credit are excluded.
Project Finance	Project finance includes all loans provided to projects such as energy, power, industrial, infrastructure and agricultural project that rely primarily on the project's cash flow for repayment.
Commercial real estate	This asset class includes on-balance sheet loans for specific corporate purposes, namely the purchase and refinance of CRE, and on-balance sheet investments in CRE. This definition implies that the property is used for commercial purposes, such as retail, hotels, office space, industrial, or large multifamily rentals. In all cases, the building owner or investor leases the property to tenants to conduct income-generating activities.
Mortgages	This asset class includes on-balance sheet loans for specific consumer purposes namely the purchase and refinance of residential property, including individual homes and multifamily housing with a small number of units. This definition implies that the property is used only for residential purposes and not to conduct income-generating activities.
Motor vehicles	This asset class refers to on-balance sheet loans and lines of credit for specific (corporate or consumer) purposes to businesses and consumers that are used to finance one or several motor vehicles. Corporate loans for acquisition of vehicles for trade purposes were classified as 'Business Loans'.

The Financed Scope 3 GHG emissions are disclosed in ESG Template 1.

The Group, by taking into account the GHG emissions estimated for loan portfolio, the most significant loan exposures and the RIMA on C&E risks, decided to set a decarbonisation target on Mortgage portfolio, since their exposure corresponds to 34% of Households, Non-Financial and Other-Financial Corporations exposures as at 31 December 2025 (2024: 34%) and corresponds to c.6% of Group's GHG emissions of loan portfolio as at 31 December 2025 (2024: c.6%). The target is aligned with the Group's ESG ambition to reach Net Zero by 2050 and is linked with the objectives of the policies mentioned above. The Group has estimated the GHG emissions per square meter, as at 31 December 2022, for the properties financed under its Mortgage portfolio using the PCAF methodology and proxies, to identify the baseline. By applying SBTi target setting methodology, the baseline should be no more than a year from the target's effective date. Therefore, given the target was effective from December 2023, the baseline was set at December 2022. Then Group utilised the SBTi's tools, sectoral decarbonisation approach, in order to estimate the decarbonisation pathway that the Mortgage portfolio should follow to be aligned with the IEA B2DS. The Group decided to align the Mortgage portfolio with IEA B2DS due to the following reasons:

- i. The scenario is consistent with Global warming projections (IEA and Intergovernmental Panel on Climate Change ('IPCC')) and is considered a widely acceptable scenario.
- ii. The scenario is considered more plausible compared to the IEA's Net Zero Scenario given the fact that Cyprus market is pre-mature in the climate field. Therefore, BOCH considers reasonable to initiate its efforts based on a less intense scenario and then intensify its efforts when the overall Cyprus market is more mature in the field.
- iii. Lack of data enhances the risk of not having a solid baseline, so BOCH considers that is more prudent to initiate its efforts based on a less optimistic scenario until data availability and quality is enhanced.
- iv. The scenario is more straightforward to obtain and use as it is aligned with SBTi's available tools.

In order to ensure the feasibility of the interim decarbonisation target and derive the decarbonisation strategy of Mortgage portfolio, the Group has projected the GHG emissions per square meter for the properties financed under its Mortgage portfolio as at 31 December 2030. In order to project the Mortgage portfolio as at 31 December 2030, BOCH used various assumptions such as:

- i. Projected new lending on Mortgage portfolio between 2025-2030;
- ii. Projected square meters of each property financed under projected Mortgage new lending;
- iii. Allocation of new lending on Mortgages to EPC classifications;
- iv. PCAF proxies on GHG emissions per financed residential property;

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.2 Objectives, targets and limits (continued)

- v. Cyprus Government targets on the reduction of GHG emissions as well as the utilisation of renewable energy on residential buildings by 2030;
- vi. Maturity of Mortgage exposures between 2026-2030.

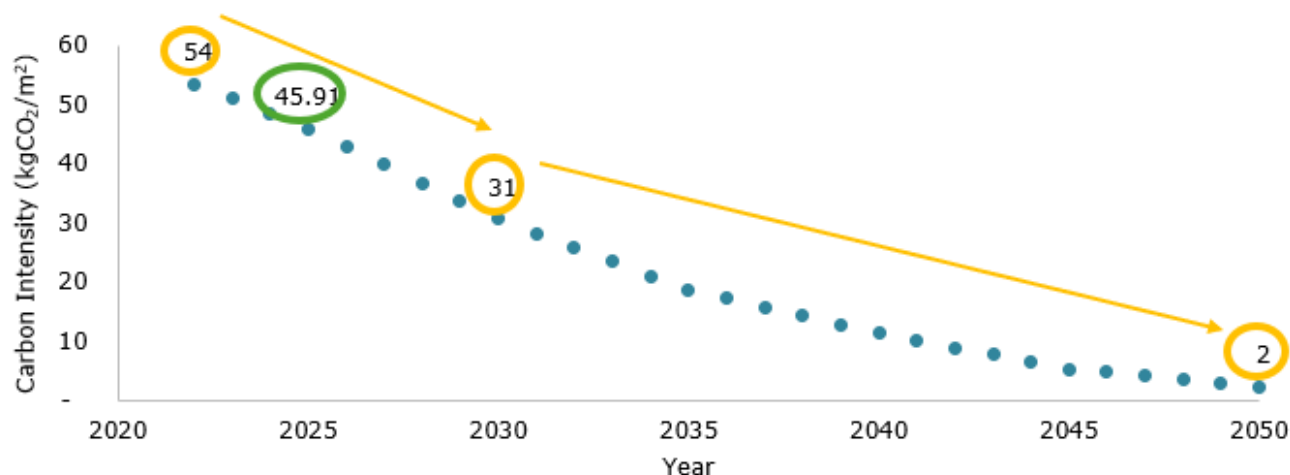

When setting the target, the Group performed several sensitivities on the assumptions used to project Mortgage portfolio as at 31 December 2030 in order to ensure the feasibility of the target. Under all scenarios (sensitivities) the decarbonisation target on Mortgage on 2030 is achieved. In addition, sensitivities were performed to the baseline of 2022, given the lack of sufficient data, in order to ensure that when data quality of the estimation is improved in the upcoming years the adjusted decarbonisation target will be met. The decarbonisation target on Mortgage is also achieved after the increase / decrease of baseline by 10%, under all scenarios. The decarbonisation target has not been externally assured by relevant climate global bodies such as SBTi.

The decarbonization target set on Mortgage portfolio is summarized on the table below:

Metric	Emissions Scope	2022 Base line	Target year	Target	Target reduction	Performance as at 31 December 2025	Figure as at 31 December 2025	Methodology
kgCO ₂ /m ²	S1 & S2	53.50	2030	30.65	(43%)	(14%)	45.91	PCAF/SBTi
kgCO ₂ /m ²	S1 & S2	53.50	2050	2.34	(96%)	(14%)	45.91	PCAF/SBTi

The Group aims to reduce by 43% the kilograms of GHG emissions financed per square meter (kgCO₂e/m²) under the Mortgage portfolio, by 2030 compared to 2022 baseline. The Mortgage portfolio as at 31 December 2025 produced 45.91 kgCO₂e/m² (2024: 47.19 kgCO₂e/m²) which is 14% (2024: 12% lower) lower compared to the baseline due to increase in energy efficient residential properties financed in 2024 following introduction of Green Housing product.

Carbon Intensity Target – Mortgage Portfolio

Actual carbon intensity performance as at 31 December 2025

Targets

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.2 Objectives, targets and limits (continued)

The Group in addition to the Green Housing product with a variable interest rate introduced in 2024 the Green Housing product with a fixed interest rate. Both products are aligned with the GLP of the LMA, supporting the decarbonization strategy of the mortgage portfolio. The Group's new lending strategy, embedded in the 2026-2028 Financial Plan, include a new lending internal KPI associated with the Green Housing product which represents the decarbonization lever to reach the carbon intensity reduction as presented in the above graph.

The feasibility of this GHG emission reduction target is strengthened by Cyprus legislation, which mandates that residential properties must have an EPC Category A to obtain a planning permit for construction after July 1, 2020. The Group's Mortgage portfolio should be aligned with the abovementioned graph in order to be aligned with the climate scenario of IEA B2DS and being exposed to lower transition risks. BOCH following the abovementioned analysis determined its new Mortgage lending strategy to meet the decarbonisation target on Mortgage.

The Group monitors the performance against the new lending metric associated with decarbonisation target on Mortgage in order to take remedial action on time:

- i. By the SC, EXCO and NCGC through the Sustainability Performance Report (Quarterly)
- ii. By the SC, EXCO and RC through the Climate Risk Report (Quarterly)
- iii. By EXCO through the monthly performance pack (Monthly)
- iv. By BDC on a monthly basis.

Operational Limits to manage material climate transition and physical risks

In addition to the decarbonisation target set on the Mortgage portfolio, the Group has set Key Risk Indicators (KRIs) for both climate-related transition and physical risks. The KRI related to Transition Risks of Non-Financial Corporations (NFCs) measures the Scope 1 intensity per loan as compared with the average Scope 1 emission intensity of Cyprus Republic. The KRI and relevant thresholds are updated on an annual basis through revision of Risk Appetite process. The indicator is monitored by the SC, EXCO, RC and Board as part of the Risk Appetite quarterly reporting. The KRI is effective for 2025 and is estimated on a six-monthly basis based on PCAF standard and proxies. The indicator has been within the business-as-usual thresholds for the latest reported quarter. The limit is linked with the Group's Lending Policy.

Description	The indicator measures the potential exposure at risk in relation to transition risk. The indicator is applicable to Non – Financial Corporations only.			
Thresholds	Business as usual:	Early warning:	In-breach:	2025
	<=30%	30 – 40%	>40%	25%

Note:

- 1) The KRI measures the Potential Exposure at Risk [PEAR = (Exposures with CO2 emissions \geq the Cyprus average Scope 1 emissions)/(Total Exposure)]. This KRI is also included in the RAF.
- 2) The GHG emissions for BOC PCL's exposures are estimated using the PCAF (Partnership for Carbon Accounting Financials) proxies and standard.
- 3) The average Scope 1 emissions for Cyprus, as reported by the Republic to EuroStat, cover the period from 2021 to 2023 have been utilized, except the Services sector where 2024 data were available. When setting the indicator those were the latest available GHG emission data for Cyprus.
- 4) To calculate the PEAR ratio, the Scope 1 emissions per loan exceeding the Cyprus average per Sector were summed (numerator) and then divided by the total GHG emissions per sector, of the Non-Financial Corporation of the Bank (denominator).

The Group is also exposed to climate-related physical acute risks driven by wildfire risk through its impact on credit risk on the loan portfolio. Therefore, the Group has set a KRI that measures the exposure collateralised by immovable property with a "Very High" rating for any physical risk that can impact collaterals (wildfire and landslides) over the total exposure collateralised with immovable property. This allows the monitoring and mitigation of such risks. The KRI is effective for 2025 where the indicator has been within business-as-usual thresholds in the latest reported quarter. The limit is linked with the Group's Lending Policy.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.2 Objectives, targets and limits (continued)

Description	The indicator measures the exposure collateralised by immovable property with a "Very High" rating for any physical risk over the total exposure collateralised with immovable property.			
Thresholds	Business as usual:	Early warning:	In-breach:	2025
	<=7.5%	7.5 – 10%	>10%	5.7%

Note:

- 1) The KRI measures the Potential Exposure at Risk [$PEAR = (Exposures\ with\ physical\ risk\ graded\ "Very\ High") / (Total\ Exposure)$] both at country and district level. This KRI is also included in the RAF.
- 2) Potential exposure at Risk is calculated by considering exposure collateralised by immovable property with a "Very High" rating for wildfire and / or landslide over the total exposure collateralised with immovable property.
- 3) Each collateral location receives a rating for each risk, ranging from "Low" to "Very High". This is referred to as the SPRI (Synthetic Physical Risk Index), representing the asset's vulnerability to physical risk based on its geographic location, different climate scenarios and time periods. It is noted that SPRIs do not indicate losses on asset values but aid in measuring the materiality of exposure to physical risks in the Bank's collateral portfolio.

The above KRI was established in late 2024 being effective for 2025. In 2025, the Group revised the methodology associated with wildfire hazard by updating the approach used to assess properties located in urban and rural areas. Compared to the approach followed in 2024, the revised approach utilizes a shorter distance threshold from surrounding green areas that could potentially transmit wildfire, resulting in a more accurate and realistic conclusion. As a result, the thresholds for the above indicator have been revised compared to prior reporting period. The indicator is also monitored across material portfolios and geographies (concentration) and monitored through the Climate Risk Report on a quarterly basis by SC, EXCO and RC.

In the first half of 2025, the Group has established specific KRI on material environmental-related physical chronic risks driven by water scarcity risk through its impact on credit risk on the NFCs loan portfolio. Therefore, the KRI set by the Group measures the potential exposure at risk of water scarcity for the NFCs portfolio and it acts as a vulnerability score, rather than direct estimate of the financial impact on counterparties. The water dependency score is based on a combination of a geographic water stress map and sector-specific considerations. This allows the monitoring and mitigation of such risk. The KRI is effective for the second half of 2025 and the latest reported KRI is within the business-as-usual threshold as per below.

Description	The indicator measures the exposures with "Very High" water dependency score over the total exposure of the NFC's portfolio.			
Thresholds	Business as usual:	Early warning:	In-breach:	2025
	<=34%	34 – 40%	>40%	24%

Note:

- 1) The KRI¹ measures the Potential Exposure at Risk to water scarcity at NFCs (non-financial corporations) portfolio [$PEAR = (Exposures\ with\ water\ dependency\ score\ graded\ "Very\ High") / (Total\ Exposure)$]. It represents a vulnerability score, rather than direct estimates of financial impact on counterparties. This KRI is also included in the RAF.
- 2) The geographic Baseline Water Stress metric measures the ratio between:
 - a. Total water demand, including domestic, industrial, irrigation, and livestock uses
 - b. Available renewable surface and groundwater resources, accounting for the impact of upstream water consumption and large dams on downstream water availability
- 3) Sector specific considerations are derived from separate models (Environmentally Extended Multi-Regional Input-Output Models).
- 4) The level of water dependency should not be seen as homogenous as it is further diversified across sectors, primarily, agriculture, manufacture, accommodation and Human health and Social work activities. To that end, sector limits are in place as part of the Bank's Concentration Policy which ensures that exposure to any one sector is controlled.

The above indicator is also cascaded across material portfolios and is monitored through regular reporting to SC, EXCO and RC via the quarterly prepared Climate Risk Report.

¹ The KRI has been developed with assistance from an external third party

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.2 Objectives, targets and limits (continued)

The Group has set the following Key Performance Indicators (KPIs), applicable in 2025, where in the first half of 2025, the Bank has set an additional KPI that captures water scarcity risk, to track the effectiveness of the policies mentioned in Section Policies and Actions Related to Climate Change Mitigation and Adaptation.

Limits	Level	Policies to address material impacts and risks
% of customers with ESG Due Diligence	100% of all eligible customers	Lending Policy
Overdue insurance policies	0% overdue insurance polices	Lending Policy
Outstanding valuations	0% overdue outstanding valuations	Valuation Policy
EPCs collections for new lending	100% of eligible collateral population	Lending Policy
50% of new EPCs to be > C	50% of eligible new collateral to be greater than EPC C	Lending Policy
% of collection of water consumption data	60% collection of water consumption data from Large and Medium sized customers	Lending Policy

Operational Limits – Details

Limit	% of customers with ESG Due Diligence	
Description	Requires the completion of the ESG Due Diligence process through the Synesgy platform (ESG questionnaires). The assessment takes place annually.	
Risks addressed	The questionnaires cover a wide spectrum of ESG risks as it is structured based on GRIs, ESRS and SDGs.	
Lines / Portfolios	All eligible customers under SME Banking (Line 2) and Corporate Banking (Line 3). The KPI will become applicable to any line to which the ESG Due Diligence process is introduced.	
Thresholds	100% of eligible customers within a single calendar year	
2025	SME	Corporate
	97%	99%
Actions to reach operational limits	Increase customer engagement and awareness of the ESG Due Diligence process through trainings.	
Limit	Overdue insurance policies	
Description	Requires that all real estate obtained as collateral maintains insurance against the main physical risks	
Risks addressed	Physical risks: wildfire, flood, earthquake	
Lines / Portfolios	All lines that obtain real estate as collateral	
Thresholds	0% overdue insurance polices	
2025	0%	

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.2 Objectives, targets and limits (continued)

Limit	Outstanding valuations	
Description	Requires that all real estate obtained as collateral maintains current valuations as defined in the Valuation Policy. Since 2024, all valuers are requested to comment on C&E risks that affect each property. Furthermore, they are required to record in the Valuations System any flood, earthquake, and ground geological suitability findings as determined by the various authorities of the Republic.	
Risks addressed	Physical risks: flood, earthquake, geological findings	
Lines / Portfolios	All lines that obtain real estate as collateral.	
Thresholds	0% overdue outstanding valuations	
2025	0%	
Limit	EPCs collections for new lending	
Description	Requires that EPCs are collected for all new real estate obtained as collateral as part of new lending and are required by Law to have an EPC issued.	
Risks addressed	Transition risks	
Lines / Portfolios	All lines that obtain real estate as collateral.	
Thresholds	100% of eligible collateral population	
2025	92%	
Actions to reach operational limits	Enhance data gathering actions planned through the ESG Climate and Data gap strategy to ensure that EPCs gathered are properly reflected in the database	
Limit	% of collection of water consumption data	
Description	<ul style="list-style-type: none"> — Requires that at least 60% of water consumption data are collected for all eligible large and medium sized customers for which there is a requirement as part of the ESG Due Diligence process to disclose water consumption data. — Large and medium sized customers are those customers that complete the large and medium size ESG Questionnaire (Synesgy) and are defined as per the below: <ul style="list-style-type: none"> o Medium-sized (from 50 to 250 employees and turnover up to 50 million euros) o Large-sized (more than 250 employees or turnover exceeding 50 million euros) 	
Risks addressed	Environmental (nature related) risks: water scarcity	
Lines / Portfolios	All eligible customers under SME Banking (Line 2) and Corporate Banking (Line 3).	
Thresholds		
Corporate Banking Thresholds	60% of eligible ESG Due Diligence large and medium sized customers provide their water consumption data.	
SME Banking Thresholds	60% of eligible ESG Due Diligence large and medium sized customers provide their water consumption data.	
2025	SME	Corporate
	95%	82%

The above KRIs and KPIs are effective for 2025 therefore no comparative figures have been reported. The abovementioned KRIs and KPIs have been monitored by the RC, EXCO and SC through the Climate Risk Report on a quarterly basis. The limits are not based on scientific evidence and only internal stakeholders were engaged in setting those limits.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.2 Objectives, targets and limits (continued)

The operational limit associated with the EPC classification for new lending has not been calculated for 2025 due to limited available data on the eligible population. The Group monitored, based on data availability, the EPC classification on new lending through climate risk report and sustainability performance report which include the Financed Scope 3 GHG emissions associated with mortgage and CRE asset classes as well as break down of EPC gathered to EPC rating categories for on balance sheet exposures. The operational limit will be calculated for 2026 following the actions to reach 100% on EPC collection for new lending limits.

Limit	EPCs classification for new lending
Description	Requires that 50% of EPCs collected for all new real estate obtained as collateral as part of new lending to have a classification greater than C. The KPI relates to properties that are required by Law to have an EPC.
Risks addressed	Transition risks
Lines / Portfolios	All lines that obtain real estate as collateral.
Thresholds	50% of eligible collateral population to be greater than C

Escalation process

If any of the KRIs listed above is breached (whether at the early warning level or the in-breach level) then the breach is escalated to the CRO. If the breach relates to either a RAS or a Recovery Plan indicator (RPI), then the respective escalation process is followed. Non-RAS KRIs will be reported to the Sustainability Committee and Risk Committee on a quarterly basis and in case of material deviations will be reported to the CRO prior to committee submission, who may decide to escalate to the SC before any further escalation to the RC.

KPIs will be monitored as per the existing monitoring process in place which provides for:

- KPIs are reported to the Credit Monitoring Forum on a monthly basis and monitored versus targets on a quarterly basis;
- In case of material deviations, these will be reported to the RC as necessary.

Given that the KPIs related to ESG risks, deviations will be reported to the CRO who may decide to escalate to the SC before any further escalation to the RC.

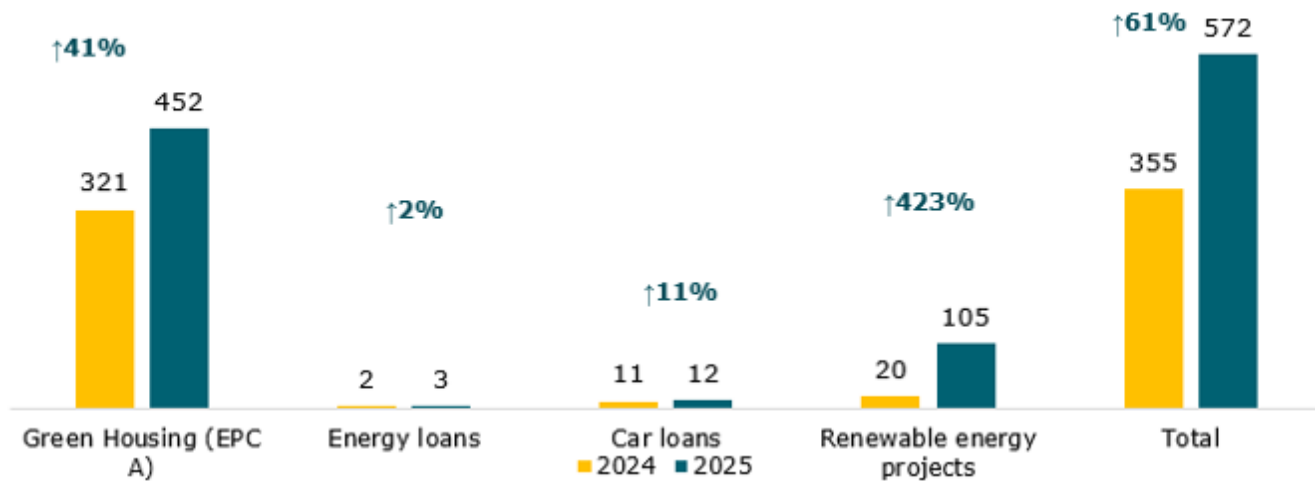

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.1.3 Activities towards environmental objectives and EU Taxonomy-aligned activities

The Group's current Green Lending Policy is based on the Loan Market Association's Green Loan Principles. The policy provides the basis for developing green products through a set of criteria that includes the attainment of a specific environmental objective, the management of proceeds to ensure that the funds are only used for the specified purpose and appropriate reporting to support the attainment of the objective. The Group aims to enhance further its policy verthrough the development of more detailed procedures to allow for the provision of green lending based upon the said Green Loan Principles and is also in the process of considering EU Taxonomy and looking for ways to implement it going forward on a best effort basis. The environmentally friendly loan portfolio of the Group is presented in the Graph below.

Environmentally Friendly Loans - Gross Loans as at 31 December (€million)

Notes:

- 1) Renewable energy projects relate to Solar and wind parks financed.
- 2) Energy loans relate to energy efficient equipment, solar panels and energy upgrade financed.
- 3) Car loans relate to financing the acquisition of Environmentally friendly vehicles under Fil-eco and Green cars under hire purchase agreement.
- 4) Green Housing relates to financing the acquisition or construction of a residential property with EPC A. The EPC is available at collateral level in the Group's database therefore the one to one (one account number one collateral property with EPC A) assumption has been applied to identify the Green Housing loans as at 31 December 2025 and as at 31 December 2024.

16.1.1.4 Engagement with new or existing counterparties

For the description of the engagement with customers and the actions taken to mitigate risks refer to Section 16.1.3.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

ESG Template 1 - Climate change transition risk (continued)

BOC PCL joined the PCAF in October 2022 and is following the recommended methodology for the estimation of the Financed Scope 3 emissions. BOC PCL has estimated Financed Scope 3 emissions relating to the loan portfolio based on PCAF standard and proxies. The PCAF Standard has been reviewed by the GHG Protocol and conforms with the requirements set forth in the Corporate Value Chain (Scope 3) Accounting and Reporting Standard for category 15 investment activities. The latest Financed Emissions PCAF standard (2025), launched in December 2025, provides detailed methodological guidance to measure and disclose GHG emissions associated with ten asset classes: listed equity and corporate bonds, business loans and unlisted equity, project finance, commercial real estate, mortgages, motor vehicle loans, use of proceed structures, securitisation and structured products, sovereign debt, and sub – sovereign debt. The approach and methodology described in the Financed Emissions PCAF standard (2025), for Financed Scope 3 emissions regarding the loan portfolio, remain unchanged compared to Financed Emissions PCAF standard (2022). In addition, PCAF provides a data quality ranking for the estimation of Financed Scope 3 emissions based on data applied in the estimation for each asset class. The scale is between 1-5 with 1 being the highest quality and 5 being the lowest quality. BOC PCL aims to continuously enhance the data quality used on the estimation of Financed Scope 3 GHG emissions and eliminate the data gaps, therefore in 2023 a client questionnaire has been launched to gather the relevant data, where possible, as well as continue to enhance the loan origination process. BOC PCL has already established a policy in the loan origination process to gather Energy Performance Certificates (ratings and GHG emissions per square meters) for the financed properties and collateral properties. Additional data gathering actions will be performed during 2026 based on the ESG and Climate Data Gap & Strategy.

BOC PCL has identified a number of transition risks, their potential impact and the transmission mechanisms to traditional risks. Whilst credit risk is one of the risks thought to be most impacted by climate change, potential impacts on liquidity, market, operational and reputational risks were also identified as per Section 16.1.3.3.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

ESG Template 2 - Climate change Transition risk: Loans collateralised by immovable property collateral – Energy efficiency of the collateral

The table below shows gross carrying amounts of loans collateralised with commercial and residential immovable property and of repossessed real estate collaterals for all counterparty sectors, including non-financial corporates and households.

Total gross carrying amount (column a):

This is the exposure of loans secured by immovable property.

Energy efficiency (column b-g):

The Estimates of Energy Efficiency were calculated using data from the Ministry of Energy and Commerce. The ministry uses literature from academia to derive tables of energy efficiency per property per year built. The energy efficiency of properties with exposures secured solely by "Land" are included only in column b.

The portfolio remains relatively the same thought-out 2025. An increase is observed in EPC values which is related to the "green mortgage" products for households.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

ESG Template 3 - Banking book: Climate change transition risk: Alignment metrics

The Bank has set decarbonisation target on its Mortgage portfolio (part of Household portfolio) for assets that meet the "Mortgage" definition of PCAF:

"This asset class includes on-balance sheet loans for specific consumer purposes namely the purchase and refinance of residential property, including individual homes and multifamily housing with a small number of units. This definition implies that the property is used only for residential purposes and not to conduct income-generating activities."

The carbon intensity metric of Mortgage portfolio has been estimated using the PCAF methodology and proxies. The decarbonisation target has been set utilising the Science Based Target Initiative's tools based on International Energy Agency's Below 2 Degree Scenario. The decarbonisation targets have been established to monitor the degree of alignment of Mortgage portfolio with the International Energy Agency's Below 2 Degree Scenario. The Bank decided to align the Mortgage portfolio with International Energy Agency's Below 2 Degree Scenario due to the following reasons:

- i. The scenario is consistent with Global warming projections (IEA and Intergovernmental Panel on Climate Change (IPCC)) and is considered a widely acceptable scenario.
- ii. The scenario is considered more plausible compared to the IEA's Net Zero Scenario given the fact that Cyprus market is pre-mature in the climate field. Therefore, the Bank considers reasonable to initiate its efforts based on a less intense scenario and then intensify its efforts when the overall Cyprus market is more mature in the field.
- iii. Lack of data enhances the risk of not having a solid baseline, so the Bank considers that is more prudent to initiate its efforts based on a less optimistic scenario until data availability and quality is enhanced.

Pillar 3 Disclosures 2025

ESG Template 3 - Banking book: Climate change transition risk: Alignment metrics

(continued)

Notes:

1. Taking into account the materiality of exposures to those sectors (3% out of Households and Non-Financial Corporations (equities, debt securities and loans and advances)), the Bank has not yet set decarbonisation targets to those sectors so to align them with Paris Agreement objectives. However, as at 31 December 2025 the Bank has set specific sector lending limits to the following sectors:
 - Coal mining (B.05.1 & B.05.2)
 - Oil (B.06.1 & C.19.2)
 - Gas (D.35.2 & B.06.2)
 - Cement (C.23.5 & C.23.6)
 - Iron & Steel & Aluminium (C.24.1 & C.24.2 & C.24.3 & C.24.4 & C.24.5)
 - Power generation (D.35.1 excluding renewable energy projects)

The Bank, through a syndicated project for Cypriot Banking industry, established an ESG Due Diligence process aiming to enhance data gathering efforts and score customers on ESG aspects. The ESG Due Diligence process will support the future disclosures on alignments metrics.

2. The Bank is focusing its portfolio alignment efforts to priority sectors, such as Mortgage, Marinetime transport and commercial real estate, rather than setting decarbonisation targets to sectors with insignificant exposure (0.68% Households and Non-Financial Corporations (equities, debt securities and loans and advances)).
3. The Bank has set an internal decarbonisation target on second-hand vessels financed using International Energy's below 2-degree scenario. The Bank is in the process to re-evaluate the target set during 2026 using more updated data.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

ESG Template 3 - Banking book: Climate change transition risk: Alignment metrics
(continued)

Notes:

1. Taking into account the materiality of exposures to those sectors (0.7% out of Households and Non-Financial Corporations (equities, debt securities and loans and advances)), the Bank has not yet set decarbonisation targets to those sectors so to align them with Paris Agreement objectives. However, as at 31 December 2024 the Bank has set specific sector lending limits to the following sectors:
 - Coal mining (B.05.1 & B.05.2)
 - Oil (B.06.1 & C.19.2)
 - Gas (D.35.2 & B.06.2)
 - Cement (C.23.5 & C.23.6)
 - Iron & Steel & Aluminium (C.24.1 & C.24.2 & C.24.3 & C.24.4 & C.24.5)
 - Power generation (D.35.1 excluding renewable energy projects)

The Bank, through a syndicated project for Cypriot Banking industry, established an ESG Due Diligence process aiming to enhance data gathering efforts and score customers on ESG aspects. The ESG Due Diligence process will support the future disclosures on alignments metrics.

2. The Bank is focusing its portfolio alignment efforts to priority sectors, such as Mortgage, Marinetime transport and commercial real estate, rather than setting decarbonisation targets to sectors with insignificant exposure (0.2% Households and Non-Financial Corporations (equities, debt securities and loans and advances)).
3. The Bank has set an internal decarbonisation target on second-hand vessels financed using International Energy's below 2-degree scenario.

Pillar 3 Disclosures 2025

ESG Template 4: Banking book - Indicators of potential climate change transition risk: Exposures to top 20 carbon-intensive firms

The Bank assesses its loan portfolio based on various accurate and publicly available providers' information and sources. With regards to the database used to consider the top 20 carbon-intensive firms the following sourced were used, including the Climate Accountability Institute's list which was released in April 2024 and the Carbon Disclosure Project (CDP), as well as Thomson Reuters.

The Group has not granted any exposures towards the most carbon intensive counterparties in the world during 2025 and 2024 and therefore does not disclose Template 4 - Banking book - Climate change transition risk: Exposures to top 20 carbon-intensive firms.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

ESG Template 5 - Banking book - Climate change physical risk: Exposures subject to physical risk

The below table discloses information on exposures in the banking book (including loans and advances, debt securities and equity instruments), towards non-financial corporates, on loans collateralized with immovable property and on repossessed real estate collaterals, exposed to chronic and acute climate-related hazards, with a breakdown by sector of economic activity (NACE classification) and by geography of location of the activity of the counterparty or of the collateral, for those sectors and geographical areas subject to climate change acute and chronic events. BOC PCL adopted a granular property-level data approach to assess the impact of physical risks such as wildfires (Acute risk) etc. Each collateral location receives a rating for each risk, ranging from 'Low' to 'Very High'. This is referred to as the SPRI (Synthetic Physical Risk Index), representing the asset's vulnerability to physical risks based on its geographic location, different climate scenarios and time periods. It should be noted that the analysis assesses the geolocation of the collaterals of the counterparties in Cyprus only under the Current Policies scenario which falls under a Hot House World pathway. In 2025, the bank identified in its materiality assessment that Water-Scarcity (chronic risk) is a material risk that could potentially affect the Bank's customers. To assess the impact of water scarcity, BOC PCL utilised data on a combination of geographic water stress map and sector-specific considerations. This results to an NRR (Nature-related risk) water dependency score that ranges from 'Very Low' to 'Very High' for different climate scenarios and time periods. The geographic baseline water stress metric measures the ration between total water demand and available renewable surface and groundwater resources in Cyprus only under a Pessimistic (SSP5-RCP8.5) scenario. The data are included in column (h) in the table for December 2025.

ESG Template 6 – Summary of KPIs on the Taxonomy-aligned exposures

The table below provides an overview of the KPIs as at 31 December 2025 and 2024 calculated on the basis of ESG Templates 7 and 8, including the green asset ratio (GAR).

31 December 2025	KPI			% coverage (over total assets)*
	Climate change mitigation	Climate change adaptation	Total (Climate change mitigation + Climate change adaptation)	
GAR stock	0.61%	-	0.61%	61%
GAR flow	0.67%	-	0.67%	83%

* % of assets covered by the KPI over banks' total assets

31 December 2024	KPI			% coverage (over total assets)*
	Climate change mitigation	Climate change adaptation	Total (Climate change mitigation + Climate change adaptation)	
GAR stock	0.57%	-	0.57%	62%
GAR flow	1.18%	-	1.18%	88%

* % of assets covered by the KPI over banks' total assets

As companies' transparency in line with the EU Taxonomy increases, it will enable expanded reporting against the Taxonomy. The adoption of Corporate Sustainability Reporting Directive (CSRD) and European Sustainability Reporting Standards (ESRS) will support further implementation of the EU Taxonomy Regulation into our business strategy, systems, and investment and lending processes. Limitations in data when assessing Taxonomy-eligible and Taxonomy-aligned activities for financial and non-financial undertakings, actual published information provided by counterparties is required. The assessment of Taxonomy-eligibility and alignment for the reporting period 31 December 2025 is based on limited published information for the financial year 2025, following the commencement of reporting obligations for the four additional environmental objectives (Water, Circular Economy, Pollution Prevention and Control, and Biodiversity) in 2025. It should be noted that for these disclosures we have taken a conservative application of the qualifying criteria underpinning the GAR based on the guidance provided to date and currently available data. Due to these current limitations across the industry changes in this ratio in future reporting periods will be driven in part by increased data availability.

Limitation in data reporting:

- i. When assessing Taxonomy-eligible and Taxonomy-aligned activities for financial and non-financial counterparties, actual information published by counterparties is required:
 - a. The assessment of Taxonomy-eligibility and alignment for the reporting period 31 December 2025 is based on published information for the financial year 2025, following the commencement of reporting obligations for the four additional environmental objectives (Water, Circular Economy, Pollution Prevention and Control, and Biodiversity) in 2025. For reporting period 31 December 2024, Taxonomy disclosures for both financial and non-financial undertakings were based on data published for the financial year 2023, due to the unavailability of 2024 data at the time.
 - b. exposure to non-financial counterparties in the Group's corporate lending portfolio currently considered taxonomy eligible is limited due to the eligibility criteria requiring counterparties to be large companies publicly listed in the EU.
- ii. When assessing Taxonomy-eligible and Taxonomy-aligned activities for lending to households, other data limitations impact reporting:
 - a. Hybrid and Electric Vehicles lending exposures originated since the beginning of 2024 are considered eligible per taxonomy criteria. However, they are not classified as aligned due to the lack of available information in the industry to assess the vehicles against the Taxonomy DNSH (Do No Significant Harm) criteria.

ESG Template 6 – Summary of KPIs on the Taxonomy-aligned exposures (continued)

Considering lack of available data in the market, only limited exposure has been identified based on published information that are considered Taxonomy-eligible or Taxonomy-aligned to climate change adaptation environmental objective. Climate change adaptation refers to adaptation solutions that either substantially reduce the risk of the adverse impact of the current climate and the expected future climate on that economic activity or substantially reduce that adverse impact, without increasing the risk of an adverse impact on people, nature or assets. Eligibility and alignment of economic activities to Climate change adaptation is considered a challenging exercise with limited published available data. Due to these current limitations across the industry changes in this ratio in future reporting periods will be driven in part by increased data availability.

ESG Template 9 – Mitigating actions: BTAR

As per Regulation (EU) 2021/637 the first disclosure date of ESG Template 9 is as of 31 December 2024. The disclosure of this information, based on current regulations is not mandatory and institutions may choose to include this information on a voluntary basis.

The Group has decided not to disclose BTAR given the limited data available on non-NFRD counterparties. The Group will make reasonable efforts to report towards ESG Template 9 in the future.

The Group is working towards implementing a green lending framework, initially based on the Loan Market Association's Green Loan Principles (GLP), and gradually on a best effort basis on the EU Taxonomy. The Bank has issued Green Mortgage and Green Car products in 2024 which are based on the GLP. Nevertheless, the Bank has so far issued loans for renewable energy, vehicle purchases (electric and hybrid) and building efficiency. Although these cannot be classified as green under any of the standards of EU Taxonomy and GLP, by virtue of the use of proceeds, they are contributing the environmental objective of climate change mitigation.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.2 Governance

16.1.2.1 Responsibilities of the management body for setting the risk framework

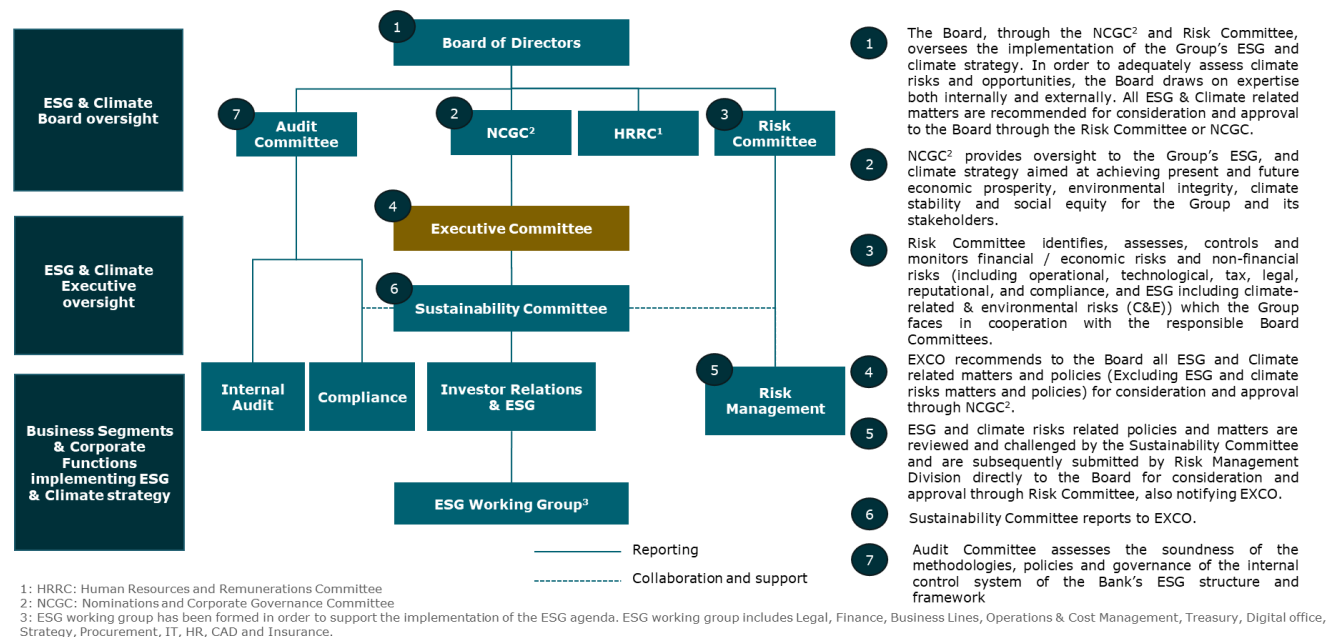

The Sustainability Committee ('SC') is an executive level committee chaired by the CEO and has as a primary role the oversight of the ESG agenda of the Group aiming to lead the Group towards a cleaner, fairer, healthier, and safer world by helping its customers manage risks in a long term sustainable and equitable way, and to be the employer of choice.

The SC is responsible for the following:

- i. Monitor and review the development of the Group's ESG strategy including the management of ESG risks, including C&E risks and recommend to EXCO for approval. Following EXCO approval then it is recommended to the Board for consideration and approval through NCGC.
- ii. Oversee the implementation of the Group's ESG & Climate strategy.
- iii. Review the institution's response and plan of action to the objectives set out under international agreements. and makes recommendations for the plan of actions to the EXCO for approval. Following EXCO approval then is recommended to the Board for consideration and approval through NCGC.
- iv. Review the ESG including C&E targets and KPIs and recommends to EXCO for approval. Following EXCO approval then is recommended to the Board for consideration and approval through NCGC. Monitor the performance of the targets and KPIs set.
- v. Review the incorporation of ESG including C&E targets, KPIs and KRIs in the business strategy and risk appetite.
- vi. Monitor progress against the Group's ESG working plan on a quarterly basis including the implementation of the ECB Guide on C&E risks
- vii. Monitor progress on KPIs set to manage C&E risks and the performance against wider ESG targets, on a quarterly basis, through the Sustainability Performance Report. The Sustainability performance report is monitored by the EXCO and NCGC on a quarterly basis.
- viii. Request from the relevant departments to submit proposals and recommendations of corrective actions whenever a KPI to manage C&E risks is not aligned with the thresholds set.
- ix. Monitor KRIs set to manage C&E risks, through the Climate Risk report, on a quarterly basis. The Climate Risk Report is also monitored by the EXCO and RC on a quarterly basis.
- x. Oversee the degree of the Group's alignment with regulatory ESG including C&E related guidance, rules (such as EU Taxonomy, SFDR and CSRD, EBA) and ECB expectations.
- xi. Oversee the establishment of environmentally friendly products and Sustainable Finance Framework.
- xii. Review policies relating to ESG matters, including C&E, matters to ensure that they are in line with the needs of the Group and the Group's ESG strategy and that they comply with applicable legal and regulatory requirements. Monitors the implementation of policies relating to ESG including C&E matters (Excluding ESG and C&E risks related policies).
- xiii. Review and challenge Risk Management Division (RMD) regarding ESG matters and policies, including C&E risks related matters and policies, such as ESG and C&E risk identification, quantification, materiality assessment (MA) and establishment of ESG and C&E criteria in the loan origination process. RMD subsequently submits to the Board for consideration and approval through RC for approval of ESG and C&E risks related matters and policies, also notifying EXCO.
- xiv. Review non-financial disclosures and recommend to the Board for consideration and approval through NCGC and EXCO.
- xv. Monitor the external ESG and C&E trends affecting the formulation of ESG policies, strategies and objectives

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

16.1.2.1 Responsibilities of the management body for setting the risk framework
 (continued)

The Role of the Risk Committee

The main purpose of the RC is to review, on behalf of the Board, the aggregate Risk Profile of the Group, including performance against Risk Appetite for all risk types and ensure both Risk Profile and Risk Appetite remain appropriate.

The RC is responsible for the following:

- i. Oversee the identification, assessment, control and monitor of financial/economic risks and non-financial risks (including operational, technological, tax, legal, reputational, compliance, and ESG including C&E risks) which the Group faces in cooperation with the responsible Board Committees.
- ii. Ensure that the Group's overall Risk Profile and Risk Appetite remain appropriate given the evolving external environment, the Group's character and the internal control environment.
- iii. Ensure effective and on-going monitoring and review of the Group's management or mitigation of risk, including the Group's control processes, training and culture, information and communication systems and processes for monitoring and reviewing their continuing effectiveness.
- iv. Report to the Board any current or emerging topics relating to ESG risks and matters, including C&E risks and matters, that are expected to materially affect the business, operations, performance, or public image of the Group or are otherwise pertinent to it and its stakeholders and if appropriate, detail actions taken in relation to the same.
- v. Determine the principles that should govern the management of risks (including ESG and C&E risks), through the establishment of appropriate Risk Policies.
- vi. Review and monitor key enterprise wide ESG including C&E metrics, targets, KPIs, KRIs and related goals and monitor the progress towards achieving targets and benchmarks.
- vii. Receive and review periodic reports from management on ESG and climate trends, issues, and risks, including developments in applicable regulations, as well as the corresponding mitigation initiatives and controls.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.2.1 Responsibilities of the management body for setting the risk framework (continued)

The role of Nomination and Corporate Governance Committee

The Nominations and Corporate Governance Committee (NCGC) has been delegated authority by the Board to provide oversight to the Group's sustainability strategy aimed at achieving present and future economic prosperity, environmental integrity, climate stability and social equity for the Group and its stakeholders.

The NCGC is responsible for the following:

- i. Oversight the development of the strategy for ESG including C&E matters focusing on Environmental, Climate, Ethical, Social, and Economic pillars and ensure it is embedded throughout the operations of the Group.
- ii. Advise, support and guide CEO and Executive Management Team in formulating and implementing a business strategy geared to the sustainable development of the Group taking into account ESG including C&E impacts.
- iii. Oversee the SC's implementation and progress regarding the ESG working plan.
- iv. Review the institution's response and plan of action to the objectives set out under international agreements.
- v. Review and recommend to the Board for approval the ESG targets and KPIs, including C&E targets and KPIs, and monitor their performance.
- vi. Review and recommend to the Board for approval the non-financial disclosures presented by the SC, including CSRD Sustainability Statement in accordance with ESRS.
- vii. Review and recommend to the Board for approval the ESG and Environmental Policy and Sustainable Finance Framework which enables BOCH and/or BOC PCL to issue Green/Social or Sustainable bonds.

The role of Audit Committee

The AC has been delegated authority by the Board to assess the soundness of the methodologies and policies that the management of the Group uses to develop ESG, including C&E metrics and other disclosures, and to assess the key vendors' plans for sustainability.

The AC is responsible for the following:

- i. Ensure the ESG frameworks/standards, including C&E frameworks/standards, used are proper and relevant climate-related financial disclosures are investor grade.
- ii. Consider materiality in terms of how ESG issues, including C&E issues, impact the Group's financial performance and ability to create long-term value (Financial materiality) and how the Group's actions impact people and the planet (Impact materiality).
- iii. Ensure the ESG-related disclosures to be included in the Group's period reports.
- iv. Review other material public disclosures with respect to ESG, including C&E matters and discuss with management the Group's engagement with stakeholders on key ESG matters, including C&E matters, including in response to any proposals or other concerns that have been submitted to BOCH and/or BOC PCL or the Board.
- v. Ensure that Internal audit incorporates ESG, including C&E risks, in its Risk and Audit Universe.
- vi. Assess the soundness of methodologies and policies management the Group uses to develop ESG include C&E metrics and other disclosures and to assess the key vendor's plans about sustainability.
- vii. Overseeing all matters relating to the relationship between the Group and the external auditors. This also includes overseeing the external audit activities in relation to the limited assurance over the Sustainability Statement.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.2.2 Integration of measures to manage environmental factors and risks in internal governance arrangements

The Group has dedicated resources for the handling of ESG matters. Beyond the governance arrangements described above, ESG accountabilities have been set across various divisions of the Group.

Investor Relations and ESG Department (IR&ESG)

The Group's IR&ESG department is developing and implementing the ESG and climate Strategy. The IR&ESG main responsibilities are to:

- i. Develop the action plan for the implementation of the ESG and climate strategy;
- ii. Compile the ESG working plan and monitor its progress;
- iii. Establish the ESG and climate targets and KPIs and monitor their progress;
- iv. Develops and rolls out the institution's methodology for portfolio alignment assessments (e.g., using SBTi);
- v. Develops and rolls out the institution's methodology for measuring financed emissions (e.g., using PCAF);
- vi. Prepare ESG and climate-related reporting, including CSRD;
- vii. Coordinate the activities and deadlines of the ESG Working Group;
- viii. Review in cooperation with RMD the activities completed by the ESG Working Group;
- ix. Support other functions in the formulation/update of policies in line with ESG Strategy;
- x. Report to the SC in frequent intervals and Board Committees in line with the Terms of Reference;
- xi. Update ESG communication messages in coordination with Corporate Affairs Department (CAD);
- xii. Communicate ESG strategy to internal and external stakeholders in coordination with CAD and Risk Management; and
- xiii. Manage relationship with ESG Rating Agencies & analysts and coordinates improvement actions.

Risk Management Division

The RMD is responsible for the identification, quantification and monitoring of ESG risks, including C&E risks, for own operations and clients. The main responsibilities are to:

- i. incorporate ESG risks, including C&E risks, in the Risk Management Framework, policies and procedures;
- ii. incorporate ESG and climate criteria in the loan origination process;
- iii. review in cooperation with IR&ESG the activities completed by the ESG Working Group;
- iv. comply with ECB guide on C&E risks;
- v. establish the ESG and climate targets and KPIs in cooperation with IR&ESG; and
- vi. establish the C&E KRIs through the ESG and climate targets and KPIs set.

The RMD main tasks regarding ESG risks, including C&E risks:

- i. Carries out the necessary materiality assessment in relation to C&E risks;
- ii. Identifies ESG risks, including C&E risks, and ensures their inclusion in the risk taxonomy and risk register of BOC PCL;
- iii. Quantifies C&E risks through scenario or other analysis and provides estimates for their potential impact;
- iv. Assesses the impact of C&E risks on the Bank's capital adequacy from an economic and normative perspective;
- v. Incorporates C&E risks in its risk classification procedures;
- vi. Analyses and provides expert judgement on exposures to clients from high-risk industries;
- vii. Makes recommendations for risk-mitigating actions for transactions assessed as high-risk;
- viii. Prepares and maintains the institution's climate-related risk management policies (e.g., exclusion policies);
- ix. Develops and rolls out the institution's climate-related client questionnaires for due diligence and data collection purposes;
- x. Conducts C&E risks stress testing and provides input on ESG supporting Governance;
- xi. Produces reports on C&E risks for submission to the SC, EXCO and RC;
- xii. Provides advice and checks on the institution's climate-related product offering, such as green products.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.2.2 Integration of measures to manage environmental factors and risks in internal governance arrangements (continued)

Three Lines of Defence

As per the three lines of defence model established by the Group, Control Functions have defined responsibilities in terms of ESG risks.

Business Lines

The main tasks of Business lines on ESG risks, including C&E risks are to:

- i. Lead the interaction with customers regarding the incorporation of the ESG and climate criteria in the credit underwriting process through the ESG questionnaires and scoring process;
- ii. Observe and adhere any sector limits being put in place as derived from the science-based targets;
- iii. Implement all policies relating to the Green transition (e.g., Environmental and Social Policy, Green Lending Policy etc.);
- iv. Enable the Green Transition through promotion of Green products and services;
- v. Engage with key customers for investments in Green products;
- vi. When discussing a new lending, guide the customers towards green lending which will help them become a more sustainable business;
- vii. Implement initiatives included in the BOC PCL's Decarbonisation strategy for own operations to reduce energy consumption, paper consumption and GHG emissions in relation to the operation of their business unit;
- viii. Own and manage C&E risks as part of their responsibility for achieving objectives and for implementing corrective actions to address process and control deficiencies; and
- ix. Support in the design of "green" products and services to meet customer's needs and incentivise clients to reduce emissions.

Compliance Division

Compliance Division's main tasks regarding ESG risks, including C&E risks, are:

- i. Identifying, on an on-going basis, the legal and regulatory framework concerning ESG and climate-related risks and communicating to business units any regulatory developments applicable to them;
- ii. Ensuring that a complete and updated register of ESG and climate-related risks is maintained and that emanating compliance obligations are documented and supported by appropriate action plans by the responsible units;
- iii. Assess and monitor the implementation of actions to ensure timely and effective compliance with regulatory obligations concerning ESG and climate-related risks and recommends changes to the institution's policies and coordinates the implementation of such changes;
- iv. Updates SC, EXCO and AC on ESG Regulations & Compliance Requirements;
- v. Performs compliance reviews taking into account ESG and climate-related laws, rules, regulations and standards identifying compliance weaknesses and risks. Prepares and recommends follow-up actions for mitigating such risks. Reports the outcome of these reviews to the management body and/or its committees, including as regards residual risk;
- vi. Provides advice on ESG related policies, ensuring these are consistent with the Board's risk appetite and the Group's ESG Strategy;
- vii. Provides advice on design and evolution of the ESG and Climate Governance Structure; and
- viii. Supports functions and Business Lines for Compliance with ESG Regulations.

Internal Audit Division

The IA Division, as a third line of defence, provides independent assurance to the Board and Executive Management on the design adequacy and operating effectiveness of the Group's internal control framework, corporate governance and risk management processes (including ESG and climate risks), according to the risk appetite set by the Board.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.2.2 Integration of measures to manage environmental factors and risks in internal governance arrangements (continued)

IA maintains a Risk & Audit Universe, which includes all material risks that BOC PCL is exposed to, as well as all auditable areas of BOC PCL. The management of C&E risks has been included in IA's Risk and Audit Universe both as a relevant primary risk, but also as an auditable area. Therefore, during the risk assessment process, which is followed to derive IA's Annual Audit Plan (AAP), all auditable areas in the Audit Universe are assessed against C&E risks.

Furthermore:

- i. IA ensures the existence of adequate and appropriate resources for all audit engagements included in the AAP, through the calculation of the estimated hours needed on the basis of engagement scope and complexity, while also considering the assigned staff's knowledge, skills and other competencies in the area. Through the use of timesheets, the actual hours spent are recorded and compared with the estimated hours, with deviations investigated and if necessary relevant actions being taken.
- ii. The knowledge and skills of the IA staff is assessed on an annual basis, in accordance with its Competency Framework. Based on this assessment, IA takes necessary actions and prepares specific development plans, in order to ensure that its staff possesses the necessary skills and knowledge for the performance of their duties (including for C&E related topics, if required).

It is noted that, since the maintenance of the Risk and Audit Universe is an ongoing process, as BOC PCL gradually builds its overall capabilities for managing C&E risks and enhances relevant processes within its first and second lines of defence, IA will be modifying its Risk and Audit Universe to cover them accordingly.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.2.3 Lines of Reporting

The Group has introduced frequent reporting to administrative, management and supervisory bodies around sustainability matters, predominantly climate, as follows:

Reporting	Frequency	Committee	Material Impacts, Risks and Opportunities
Progress update to the ESG working plan	Quarterly	1. SC/EXCO 2. NCGC/RC	1. Progress update on the ESG Working plan designed to articulate delivery of Group's ESG strategic objectives and is aligned with ECB expectations and other regulatory disclosure requirements
Sustainability performance report	Quarterly	1. SC/EXCO 2. NCGC	1. Progress update on Climate change mitigation GHG emission reduction targets (42% reduction of Scope 1 and Scope 2 GHG emissions by 2030 compared to 2021 and 43% reduction in carbon intensity metric of mortgage portfolio by 2030 compared to 2022) 2. Progress update on Climate change mitigation new lending internal KPIs
Climate risk report	Quarterly	1. SC/EXCO 2. RC	1. Update on exposure to C&E risks 2. Progress on Climate change mitigation KRIs 3. Progress on Climate change adaptation KRIs 4. Update on implementation of ESG Due Diligence on loan Origination process 5. Update on Energy Performance Certificates (EPC)
Risk appetite framework (RAS) dashboard	Quarterly	1. EXCO 2. RC	1. Climate change mitigation and climate change adaptation update on KRIs
Business environment scan (BES) preliminary impact assessment on C&E updates and developments	Quarterly	1. SC/EXCO	1. Identification of C&E related updates and developments impacting Business Strategy and Risk assessment of the Group (Climate Change ROs).
BES final impact assessment on C&E updates and developments	Annually	1. SC/EXCO 2. NCGC/RC	1. Identification of C&E risk related updates and developments and integration to the Business Strategy and Risk assessment of the Group (Climate Change ROs).
Double materiality assessment	Annually	1. SC/EXCO 2. NCGC/AC	1. Approach towards DMA 2. Approach to the Group's Business segments on DMA 3. Impacts identified and threshold applied 4. Risks and opportunities identified, and threshold applied 5. Key assumptions used in the DMA and procedures performed to support the assumptions 6. Material IROs identified and comparison of IROs with best practices 7. Results of stakeholder validation and consultation procedures
Green new lending internal KPIs	Monthly	1. BDC/EXCO	1. Progress update on energy, climate change mitigation and adaptation new lending internal KPIs

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.2.4 Alignment of the remuneration policy with institution's environmental risk-related objectives

The Group has taken necessary steps in embedding its ESG strategic goals within its remuneration policy, to connect the performance of its personnel to ESG and climate matters. The remuneration policy promotes sound and effective risk management, in line with the Group's ESG and climate strategy and does not encourage excessive risk taking that exceeds the level of risk tolerated by the Group.

Remuneration structure of the Group typically consists of fixed plus variable remuneration. Fixed remuneration does not embed any ESG incentive considerations. Variable remuneration is based on a combination of the performance of the employee, the overall performance of the business unit the individual belongs to, and the Group's consolidated financial results. Variable remuneration provisions are also captured in the Financial Plan.

Regarding variable remuneration, performance criteria (financial and/or not financial), set to measure the performance of Senior Management, contain KPIs that relate to the implementation of the Group's ESG strategy, reflecting the Group's emphasis on achieving its sustainability related objectives, in accordance with the role and responsibility of each Senior Manager in relation to the ESG Strategy. These KPIs are used to evaluate the performance of Senior Management, when the distribution of a Short-Term Incentive Plan (STIP) is activated. Specifically, the level of STIP for Senior Management is adjusted in accordance with Group's performance and individual performance. The KPIs embedded in the performance criteria of Senior Management are primarily qualitative (Oversee the ESG Working Plan, effective implementation of decarbonisation activities on own operations etc.) but certain quantitative KPIs are included as well, such as annual Green new lending internal KPIs for Business Lines. The weight of ESG related KPIs on applicable individual Senior Management's performance appraisal is between 3%-15%. Senior Management's KPIs for individual performance appraisal are approved annually by the Board of Directors. The Board of Directors annually approves a proposal for the implementation of a Short-Term Incentive Plan (STIP) across the organisation. The allocation criteria are to be approved on an annual basis by the Board of Directors. The annual bonus pool will vary in accordance with the Group's performance/profitability for each financial year. Performance will typically be assessed based on a one-year performance period.

The Long-Term Incentive Plan (LTIP) was approved by the 2022 AGM, which took place on 20 May 2022. The LTIP involves the granting of share awards and is driven by scorecard achievement, with measures and targets set to align pay outcomes with the delivery of the Group's strategy. Currently, under the plan, the employees eligible for LTIP awards are the members of the Senior Management Team, including the Executive directors. The LTIP stipulates that performance will be measured over a 3-year period and sets financial and non-financial objectives to be achieved. At the end of the performance period, the performance outcome will be used to assess the percentage of the awards that will vest.

The AGM resolution, approved by the shareholders in May 2024, gave the Group the flexibility to increase the ratio of variable to fixed remuneration to up to a maximum of 100% for Material Risk Takers. Up to 100% of the awards are subject to malus and clawback provisions in accordance with applicable legislation and regulations.

Individual performance is also taken into consideration in the LTIP. Furthermore, the applicable scorecard under the LTIP includes a KPI on external ESG rating score with a target being an AA ESG rating for the Group, and this outcome has a 5% weight in the LTIP.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3 Risk Management

16.1.3.1 Timeframes

The time-horizons are aligned with regulatory expectations of the European Banking Authority (EBA).

For the purposes of the Double Materiality Assessment (DMA) within the Sustainability Statement, the time-horizons are aligned accordingly with the European Sustainability Reporting Standards (ESRS).

Specifically, the short-term horizon utilised under risk management is aligned to the Group's strategic financial and planning process and is defined as zero to four years, while the long-term horizon is defined as beyond ten years, as expected with EBA Guidelines for the assessment of C&E Risks. The logic of this is explained below:

Time horizon label	Start Year	End Year	Rationalisation
Short-term (0-4 years)	2025	2029	The Group is committed to become carbon neutral in own operations by 2050 with interim target to reduce Scope 1 and Scope 2 GHG emissions from own operations by 42% by 2030 compared to 2021 baseline. The Group has focused its main decarbonisation actions in the short-term up to 2029 in order to lead the decarbonisation efforts, lead by example and also to benefit from any government subsidies that will be announced as part of the Recovery and Resilience Facility (RRF) of the EU. Taking also into account the CSRD's amended scope and reporting periods following the Omnibus Directive and the "Stop the Clock" Directive, for EU companies, the general scoping thresholds apply (>1000 employees and >€450 million Net Turnover) and will be applicable from 2028 and every year thereafter up until 2029.
Medium-term (5-10 years)	2030	2034	The Group is committed to become carbon neutral in own operations by 2050 with interim target to reduce Scope 1 and Scope 2 GHG emissions from own operations by 42% by 2030 compared to 2021 baseline, therefore sustainability ESG Risks should be identified and managed in a horizon of 5-10 years. As 2030 is the year set by the EU for the goal of "Fit for 55" (i.e., a 55% reduction of GHG emissions below 1990 levels), the Group has also set 2030 as the medium-term risk horizon for the identification and management of ESG Risks. Therefore, the time horizon for medium term is between 5-10 years.
Long-term (11-20 years)	2035	2050	The Group considers a time horizon between 11 and 20 years. The Group has set its ambition to become net zero by 2050, which indicates that Scope 1, Scope 2 and Scope 3 GHG emissions should be reduced by 2050 to net zero. The climate related risks associated with Financed Scope 3 GHG emissions depend also on the useful life of the assets, which for the majority of the current loan portfolio of the Group this translates to a maturity beyond 10 years. As such a long-term time horizon has been set of over > 11 years to cover both the risks as well as the strategic aspects of climate-related risks within the organisation.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.2 Definitions and methodologies

BOC PCL has aligned its definitions of C&E risks with the requirements set in the ECB's Guide on climate-related and environmental risks (November 2020), Good practices for climate-related and environmental risk management Observations from the 2022 thematic review (November 2022) and the EBA's Guidelines on ESG Risk Management (January 2025). BOC PCL has enhanced its Risk Identification and Materiality Assessment process (RIMA), and this analysis was also supported through the usage of the UNEP FI PRB's Impact Analysis Tool as well as several resources through literature and other reports. Furthermore, BOC PCL has used the Network for Greening the Financial System scenarios (NGFS) in the development of its stress testing framework that took place in 2023. More details on these methodologies and the outcome of the analysis are provided in the sections that follow.

16.1.3.3 Processes to identify, measure and monitor activities and exposures

ESG Risks Identification & Materiality Assessment (RIMA) process

The Group while conducting the DMA, utilised the results derived from the RIMA process in regard to C&E risks. BOCH has refined its MA of C&E risks as drivers of existing financial and non-financial risks, namely Credit risk, Liquidity risk, Market risk, Operational risk, Strategic risk as well as Reputational and Legal risk, taking into consideration its business profile and loan portfolio composition. For 2025, the Group has utilised the work carried out in the Double Materiality Assessment (DMA) under the Corporate Sustainability Reporting Directive (CSRD) to incorporate Social and Governance (S&G) risks within the RIMA process. As a result, the RIMA process has been renamed from "C&E" to "ESG" RIMA.

As part of the RIMA process, BOCH has enhanced the following steps to ensure a comprehensive and structured Materiality Assessment (MA) process, having due consideration on the specificities of its business model, operating environment and risk profile:

- i. Identification and documentation of ESG risk drivers
- ii. Definition of transmission channels for ESG risks
- iii. Assessment of materiality of C&E risk drivers
- iv. Incorporation of S&G risks as per the qualitative mapping of the European Sustainability Reporting Standards (ESRS) sub-topic areas to the Group's existing risks within the Key Risk Matrix (KRM), which acts as the Bank's Risk Register. More details on the identification and assessment of S&G risks can be found within Section 16.2.3 and Section 16.3.3 respectively.

Specifically, BOCH has conducted an assessment of the following C&E risks, as drivers of existing risks:

- i. Climate-related physical risk drivers
- ii. Climate-related transition risk drivers
- iii. Environmental transition risk drivers (other than climate risks)
- iv. Environmental physical risk drivers (other than climate risks)

The assessment has been conducted using both quantitative and qualitative methods. For data driven methods, a combination of internally collected Group specific data and external data have been used.

In summary, as a first step, a more granular list of potential C&E risk drivers has been identified through the enhancement of the inventory of C&E risks already developed by BOCH in the course of the previous C&E risk assessment exercises. In particular, the Group has proceeded with an additional classification and categorisation of the C&E risks across four levels of granularity as per the following example:

- i. Climate-related risk (Level-1)
- ii. Physical risk (Level-2)
- iii. Acute risk (Level-3)
- iv. Wildfire (Level-4)

As a second step, the ESG risks have been mapped, by RMD to the existing financial and non-financial risks through respective transmission channels. For transmission channels refer to the relevant paragraph below.

As a third step, a combination of qualitative and quantitative methods has been utilised for the purpose of the performance of the MA of C&E risks using various materiality parameters and thresholds, depending on the method and data used for assessment. In addition, the evolution of C&E risks has been considered over the short, medium and over a long-term horizon of at least 10 years as expected by the EBA Guidelines.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.3 Processes to identify, measure and monitor activities and exposures (continued)

An overview of the steps followed for the performance of the MA is presented in the following figure:

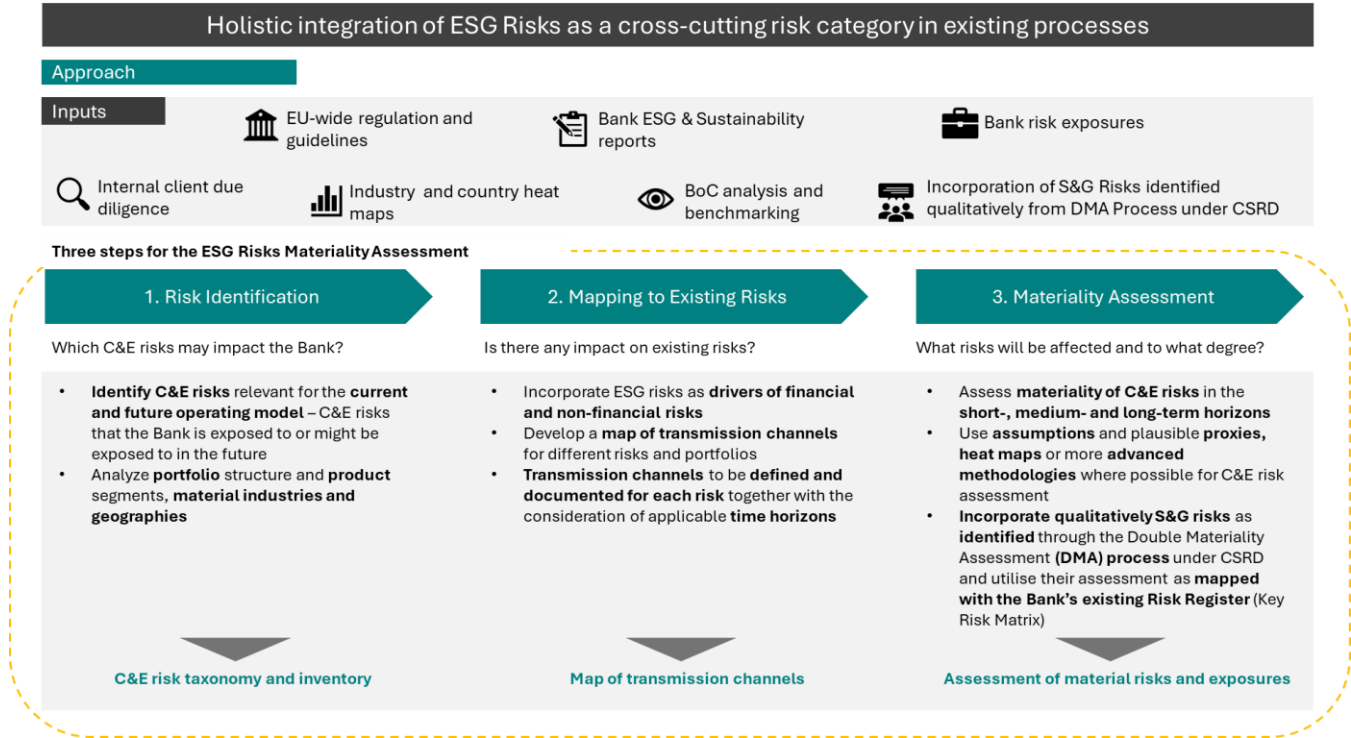

Figure X: Overview of BoC's ESG Risks MA 2025 stages

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.3 Processes to identify, measure and monitor activities and exposures
(continued)

The following table provides an overview of the BOCH’s C&E risks inventory, which includes all C&E risks considered as part of the MA performed. A further split of C&E risks has been considered accordingly by defining thirty (30) underlying risk types.

ID	C&E risk	C&E risk sub-type	C&E risk sub-type	C&E risk sub-type		
	[Level 1]	[Level 2]	[Level 3]	[Level 4]		
1	Climate-related	Physical	Acute	(Extreme) Heat		
2				Drought (increased frequency, intensity, duration)		
3				High intensity / duration precipitation events (increase; causing flooding)		
4				Landslide		
5				River flood		
6				Storms (increased activity and/or intensity)		
7				Wildfire		
8				Chronic	Desertification	
9	Climate-related	Physical	Chronic	Ocean acidity		
10				Precipitation (decreased average precipitation)		
11				Sea level rise (increasing risk from coastal flood)		
12				Temperature (increase of average temperature)		
13		Transition	Policy and Regulation	Technology	Failure to comply with climate (ESG) disclosures and GHG reporting obligations	
14					Risks from litigation	
15			Market	Market	Market	Transition to low-emission alternative products and services/business models
16						Increased energy costs and costs of raw materials
17						Increased stakeholder concern or negative stakeholder feedback / markets sentiment and preferences
18	Environmental	Physical	Acute	Earthquake		
19				Tsunami		
20			Chronic	Chronic	Chronic	Air pollution
21						Soil pollution
22						Water pollution
23						Biodiversity loss (incl. species extinction)
24						Deforestation (incl. habitat destruction) and land use change
25						Water scarcity
26						Pests (increased prevalence)
27						Transition
28			Environmental protection requirement			
29			Environmentally friendly technologies			
30	Market	Environmentally driven consumer behavior				

Each C&E risk has been individually assessed as a driver of Credit risk, Liquidity risk, Market risk and Operational risk, and individual risk scores have been assigned. For these categories of existing risks, the results of the assessment have been aggregated at the level of physical and transition risks sub-types. The assessment of C&E risks as drivers of Strategic risk, Reputational risk and Legal risk has been performed on the abovementioned granularity level.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.3 Processes to identify, measure and monitor activities and exposures (continued)

ESG Transmission Channels

C&E risks are recognized as drivers of the existing risks (Credit Risk, Market Risk, Liquidity Risk, Operational Risk, Reputational Risk, Strategic Risk and Legal Risk) and may impact BOCH directly or indirectly through counterparties, assets (microeconomic channels) or the broader economy in which the relevant clients and BOCH operates (macroeconomic channels). BOCH has defined the transmission channels through which the C&E risks can influence each of its existing risk categories. During 2025, BOCH has defined the transmission channels with regards to the social and governance risks based on the ESRS topics in alignment with the CSRD Directive. A more detailed description of each of the ESG risk transmission channels (not limited to ESG risks identified as material) regarding the principal risks and the impact arising on BOCH is provided in the table below.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.3 Processes to identify, measure and monitor activities and exposures

(continued)

Assessment of C&E risks as drivers of financial and non-financial risks

Following the mapping of C&E risks as potentially relevant or not-relevant drivers of the principal risks through the transmission channels, follows the assessment of the C&E risks and their relevant impact based on the principal risks. BOCH has applied a combination of both qualitative and quantitative methods. The following methodologies have been applied:

a. Quantitative Geographic Assessment

This assessment is applicable to C&E physical risks as drivers of Credit, Market, Liquidity and Operational risks. Specific physical climate related hazards, namely Wildfire, Landslide, River Flood, Wind Gusts (Storms), and Sea Level Rise have been considered using geolocation data (i.e. coordinates, postal codes, municipalities) with respect to the following:

- i. Credit risk: borrowers' collateralized (secured) portfolio (geolocation coordinates of collateral properties) and unsecured portfolio (postal codes or municipalities of borrowers' location);
- ii. Market risk: properties of BOCH's REMU portfolio (geolocation coordinates of collateral properties);
- iii. Liquidity risk: deposits held by Cyprus residents (postal codes or municipalities of deposit holders' locations);
- iv. Operational risk: BOCH's physical locations (postal codes or municipalities of Bank's facilities).

Furthermore, specific environmental hazards, namely Air Pollution, Soil Pollution and Earthquake have been considered with respect to the following:

- i. Property collateral for Credit risk secured portfolio (geolocation coordinates of collateral properties) - in respect to Air pollution, Soil pollution and Earthquake;
- ii. Borrowers for Credit risk unsecured portfolio (postal codes or municipalities of borrowers' location) - in respect to Air pollution, Soil pollution and Earthquake;
- iii. Property collateral for the REMU portfolio for Market risk (geolocation coordinates of collateral properties) - in respect to Earthquake;
- iv. Deposits held by Cyprus residents for Liquidity risk (postal codes or municipalities of deposit holders' locations) - in respect to Earthquake;
- v. BOCH's physical locations for Operational risk (postal codes or municipalities of the Bank's facilities) - in respect to Earthquake.

To further analyze the materiality of risk exposures to both physical and environmental hazards, a distribution analysis of underlying credit exposures (for both secured and unsecured portfolios), deposit amounts and employees count across risk scores (1-Low, 2-Medium, 3-High, 4-Critical) is performed. To conclude on the materiality of a specific hazard based on the distribution analysis across risk scores, a decision tree logic has been applied leading to one resulting risk score per hazard (consistently, the same 4-level unique risk scale has been applied).

b. Quantitative Country Heatmaps

To inform the MA process, BOCH has performed a heatmapping exercise to determine how physical and transition risks affect certain industries that BOCH is exposed to, and subsequently to determine the impact on the overall Group's risk profile and operations. Three different heatmaps have been constructed to assess specific risks and segments as described below.

Country climate transition risk heat map

The heatmap was used to assess:

- i. Liquidity risk: deposits held by non-Cyprus residents (foreign deposit amounts)
- ii. Market risk: HQLA Bond portfolio (corresponding Value at Risk (VaR))

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.3 Processes to identify, measure and monitor activities and exposures (continued)

A corresponding risk score from the heat map has been assigned to foreign deposit holders based on the underlying country of residence, and to bonds based on the underlying country of the issuer. As a next step, a distribution analysis of deposit amounts and VaR across risk scores has been performed.

Country climate physical risk heat map

The heatmap was used to assess:

- i. Market risk and Liquidity risk: HQLA Bonds portfolio
- ii. Operational risk: Foreign locations of BOCH's third-party outsourcing/ providers

A corresponding risk score from the heat map has been assigned to bonds based on the country of issuer and to third party providers based on country of location. As a next step, a distribution analysis of HQLA balances (VaR for Market risk and market value for Liquidity risk) and number of employees (per country of third-party provider location) across risk scores has been performed.

In order to conclude on the materiality of climate transition and physical risks based on the distribution analysis described above, the same logic as described in the quantitative geolocation methodology (decision tree) has been applied, leading to a single resulting risk score (consistently, the same 4-level unique risk scale has been applied).

c. Qualitative analysis based on Expert Judgement

Expert judgement has been also employed to assess certain risk drivers including those for Strategic, Reputational and Legal risks. Expert judgement includes additional external sources and publicly available statistical data such as consultation reports, scientific publications and other sources featuring Cyprus-specific data from Eurostat, World Resource Institute, Climate Analytics, Climate Vulnerability Monitor etc.

d. Sectoral Analysis

For transition risks, the BOCH has used an industry heatmap with GHG emissions intensity as the indicator of the sectors' sensitivity to transition risks (the higher the GHG intensity, the higher exposure to transition risks). As a next step, a distribution of the credit exposures to these emissions categories has been allocated and an overall score for transition related risks was determined.

e. Determination of materiality

Different types of scores have been considered during the MA depending on the type of risks analysed and methods considered. Determination of materiality was concluded at C&E Risks Level 3, i.e., at the level of chronic, acute etc. risks sub-types, utilizing the Group's existing Risk and Control Self-Assessment methodology and thus assessing Impact and Likelihood on a scale from one (1) to five (5), to ensure consistency.

The definitions of each Impact and Likelihood scores have been formulated, taking into account the nature of C&E risks and encompassing different characteristics of the physical and transition risks, as well as the acute and chronic drivers in a harmonised way. Thus, for the purposes of this MA, the definitions of Impact and Likelihood have been tailored to describe the occurrence of severe C&E events or circumstances, since these are typically responsible for the great majority of the potential risk. In addition, materiality risk score levels "High" and "Critical" have been considered as "material" for the purposes of the Materiality Assessment, whilst "Low" and "Medium" scores as "non-material".

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.3 Processes to identify, measure and monitor activities and exposures (continued)

f. Reperformance of MA for 2025

The Bank has reperfomed the MA for 2025 using identical methodologies to establish whether new risks must be considered as material. More specifically, Credit, Liquidity, Market and Operational risk analysis was reperfomed with revised data and for the rest of prudential risks that were critically assessed based on expert judgement, the assessment has been revisited to ensure its validity. Furthermore, the Bank incorporated S&G risks into the MA, utilizing the DMA methodology and alignment with ESRS Sub Sub-Topics for 2025. The outcome of this analysis indicated that climate-related physical acute risks driven by wildfire are material across all time horizons under Credit, Market and Strategic risk, where water scarcity was assessed material under credit risk across all time horizons in contrast to last year's long-term materiality. Transition risks have also been identified material with regards to increase in commodity goods price and transition to low-carbon emission technologies as drivers of credit, market and liquidity risk. The RIMA process will be performed at on an annual basis, as per EBA Guidelines on ESG Risk Management.

g. Business Environment Scan (BES)

BOCH established and implemented the BES process to monitor C&E developments / updates as already described in Section 16.1.1.1. The process is mainly used as a risk identification tool, that identifies C&E risks emerging from relevant developments and their association with existing risk categories. New developments identified within the BES are carefully analysed for their relevance and potential impact on the BOCH's risk and strategic profile. This integrated approach enhances the BOCH's ability to manage and control C&E risks effectively, thus, associated risks arising from C&E risks will be closely monitored and analysed on regular basis and feed into the MA.

The results of the BES, for 2025, have been considered and informed the RIMA and Business Strategy, particularly developments which have been classified as having a "High" or "Critical".

h. Climate risk assessment at loan origination

During 2025, BOCH implements the ESG Due Diligence process with the objective being to assess customers (existing and new) on their performance against various aspects around ESG and climate risks. The process involved the utilization of internal developed structured questionnaires applied at the individual company level and has been initially deployed to customers within the Corporate Division. The questionnaires focus more on the Environmental / Climate risk pillar and aim to assess various aspects of each customer touching upon matters around Governance, Training, Strategy & Business Planning, Energy metrics and other. The Social and Governance pillars are also assessed through several relevant dimensions such as Corporate and Social Responsibility, Human Rights, Board Composition etc.

The Due Diligence process is applied when granting new and/or reviewing existing credit facilities. Since March 2024, the internally developed questionnaires have been replaced by syndicated questionnaires deployed through a common platform across the Cypriot Banking System, a fact that ensures a harmonised approach in terms of the customers' ESG assessment in all Cyprus Banks. Going forward, the Bank will consider the expansion of the ESG assessment to more customers.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

16.1.3.3 Processes to identify, measure and monitor activities and exposures
 (continued)

i. Syndicated Questionnaire Structure and Outcome

The questionnaires are differentiated by company size allowing for a proportionate assessment to be carried out. Furthermore, the questionnaires utilise a two-tiered assessment approach:

- A core version that includes questions aligned with the Global Reporting Initiative (GRI), concentrating on business aspects and ESG principles.
- An industry-specific section tailored to the company’s sector. 36 Sectors are currently covered by the questionnaires capturing the Key Carbon Intensive sectors indicated by Fit for 55 ECB’s Stress Test one-off exercise performed in November 2023.

The syndicated questionnaires are a critical component of the ESG Due Diligence process and enable BOCH to effectively assess customer’s capacity to manage ESG aspects, ensuring a thorough evaluation of their sustainability practices. The process involves determining significant ESG factors for each sector and establishing key assessment dimensions and performance metrics to evaluate customers’ ESG performance compared to industry and business activity. A non-exhaustive list of key assessment dimensions considered are depicted in the following figure.

		Qualitative & Quantitative Metrics				
		Environment	Social	Governance		
Assessment Dimensions	Management Approach	<ul style="list-style-type: none"> • Management Systems • Climate Change • Personnel Management • Policies • Environmental & Social Targets 		<ul style="list-style-type: none"> • Code of Conduct • Corporate Governance • Internal controls • ISO Certifications • Presence of a Sustainability Expert 		
	Evaluation of Management approach	<ul style="list-style-type: none"> • External verification • Environmental Certifications • Number of work -related incidents 		<ul style="list-style-type: none"> • Data privacy and Security policies • Reporting & Accountability 		
	Performance Assessment	<ul style="list-style-type: none"> • Energy consumption • Clean technologies • Renewable energy • Materials • Waste separation • Waste production • Water consumption • Scope 1, 2, 3 GHG Emissions 	<ul style="list-style-type: none"> • Average Wages of employees • Average Age of employees • Working hours • Training hours • Donations/Charities • Employee and Customer Initiatives • Occupational Health & Safety • Stakeholder relations 			
					Sectoral Dimensions	

Figure 1: Key assessment dimensions of the ESG Syndicated Questionnaires

The completion of the syndicated questionnaire allows both BOCH and the customer to receive the customer’s final assessment that includes the ESG Score. The assessment is valid for a 12-month period and following the lapse of that period, a new assessment needs to take place. The ESG Score is provided in a scale of A to E, where A indicates an excellent level of sustainability where E indicates a low level of sustainability respectively.

Upon completion of the process, the customer receives an ESG certificate, a survey report that includes the ESG Score obtained as well as the breakdown of the scores across the macro-areas that make up the questionnaire, the customer responses to the questionnaire and an Action Plan.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.3 Processes to identify, measure and monitor activities and exposures (continued)

The Action Plan contains recommendations on actions to be taken by the customer ranked according to their priority. At this point, these recommendations such as calculations of GHG emissions etc. are not binding but they are however viewed as the initial steps to guide customers to improve their customer ESG Score and increase their resilience against C&E risks.

BOCH is currently incorporating ESG Covenants to address risks identified during the ESG Due Diligence Process. Recognizing the current market conditions and the gradual shift of its customers towards sustainability in Cyprus, BOCH will align the imposition of these covenants with the implementation timeline of the CSRD.

j. Climate Risk Scenario Analysis and Stress Testing

Scenario analysis and climate risk stress testing are methods which assist in evaluating and managing the possible effects of C&E risks, to the Group's business strategy and financial planning decisions. By nature, this analysis is of an informative nature and focuses on the planning horizon of the business plan.

BOC PCL has a risk-based approach for the management of C&E transition and physical risks in lending. C&E risks have been incorporated into the risk identification, measurement, and capital planning processes, in line with regulatory expectations and supervisory guidance. Physical risks and transition risk drivers were assessed across the relevant portfolios, considering sectoral sensitivities, collateral vulnerabilities, geographical location, and forward-looking macroeconomic scenarios. The integration of these risk factors reflects the BOC PCL's commitment in enhancing risk management practises and ensuring its resilience under both baseline and stressed climate pathways.

Climate scenarios developed by the Network for Greening the Financial System (NGFS) have been utilised by BOC PCL as the basis for assessing climate risks. These scenarios provide different possible future pathways for climate policy and enable the Group to understand how C&E physical and transition risks could influence the risk profile of certain exposures through changes in borrowers' financial capacity, asset value, and recovery prospects. Consequently, these risks were incorporated within the estimation of the Probability of Default (PD) and Loss Given Default (LGD). As a result, customers within sectors more vulnerable to transition pressures or physical and environmental hazards such as Hotels, Real Estate etc are more susceptible to experience an impact on their LGDs and PDs. The calibration was embedded in BOC PCL's internal models and stress testing framework, ensuring that capital adequacy reflects the potential impact of climate and environmental related risk drivers over the short- and long-term planning horizon.

(i) C&E Risk ICAAP Qualification

In 2025, BOC PCL enhanced its quantification framework with regards to C&E risks for the purposes of scenario analysis and stress-testing within the context of ICAAP, as expected with regulatory requirements and market best practices. The framework addresses all sectors of the BOC PCL's portfolio, but dedicated models were created for those sectors that are more susceptible to transition risks, based on their inherent activities and their exposures. Such sectors include Construction, Hotels, Real Estate and Mortgages whilst the remainder of BOC PCL's portfolio is catered through a generic model.

The ICAAP is a key annual planning process that supports the Board and senior management in identifying, measuring, and monitoring the Group's risks, while ensuring that sufficient capital is maintained to support the Group's risk profile. C&E risks have been integrated into the ICAAP and the broader scenario analysis framework to assess the potential impacts of both transition and physical risk drivers across all material prudential risk. The outcomes of this assessment inform policies and actions to mitigate climate risks across the Group, as set out on Section 16.1.3.8 Description of Limits to Environmental Risks.

The approach builds on the risk quantification methodology that BOC PCL has put in place. The main elements of the approach are described below.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.3 Processes to identify, measure and monitor activities and exposures (continued)

The overall approach regarding Climate Stress Testing (CST) design is structured into three layers:

- i. **Baseline Scenario Selection:** During 2025, BOC PCL incorporated the NGFS Current Policies scenario in its baseline on which the calculations and estimations will be executed. The Current Policies scenario is considered to best reflect Cyprus' current energy realities and captures a credible outlook of limited transition risk but increasing long-term physical risk exposure.
- ii. **Transition Risk models, Physical Risk integrations and IFRS9:** In 2025 based on selected scenario, BOC PCL has integrated physical risks impact into transition risk impact by evaluating climate risks transmission into financial parameters. This includes evaluating the impacts on credit ratings / quality and real estate asset values.
- iii. **Quantification Layer:** Quantification of the financial impact by transposing it into IFRS9 risk parameters (PD and/or LGD). Within that context, IFRS9 parameters are expressed in a forward-looking approach by utilizing the macroeconomic variables of the climate scenarios. The Bank has expanded its methodology to consider both PD and LGD impacts into its quantification assessment, compared to the previous year where the assessment focused solely on LGDs.

Physical Risks on Collateral Portfolio

In terms of physical risks, efforts were focused on estimating the impact on property value from the potential materialisation of climate-related physical risks. This is considered relevant to BOC PCL, given the concentration to clients in activities relating to immovable properties such as Construction, Accommodation & Food Service, Real Estate, Mortgages as well as the fact that a significant portion of BOC PCL's collaterals are real estate assets.

To that end, BOC PCL adopted a granular property level approach to assess the impact of physical risks on collateral values using damage functions expressed as Annual Average Depreciation (AAD), reflecting climate related physical impacts within LGD estimation. Using external vendor data with location specific hazard information aligned to the NGFS Current Policies scenario, the Bank assessed the three hazards relevant for Cyprus, namely, wildfire, flood and landslide where wildfire is recognised as the primary acute risk while also capturing increased post wildfire susceptibility to the other two hazards. AAD represents the annual percentage reduction in market value based on property type, size and hazard severity and is calculated per asset through 2050. The resulting cumulative depreciation across the portfolio indicates gradual but manageable increases in physical risk exposure.

The analysis of the data allowed BOC PCL to gain an understanding of the assets vulnerable to the various physical risks, their level of riskiness as well as potential concentrations across the island. Furthermore, following the identification of physical risks, the monetary impact (damage function) for each combination of property, hazard, scenario, and year was estimated. This monetary impact considered not only the geo-localisation features, but also the asset-specific characteristics, i.e., commercial, industrial, residential and other use.

The impact of these physical hazards on the collateral portfolio was quantified in the 2025 year-end ICAAP as well as in the subsequent quarterly updates both from an economic and a normative perspective. The wildfire hazard was chosen, as the analysis indicated that it can potentially affect the largest amount of collaterals.

For the purposes of the quantification and taking a worst-case scenario perspective, BOC PCL considered the effectiveness of insurance contracts as mitigants of wildfire as well as the below factors:

- i. **Macro-economic conditions:** Economic downturns could increase insurance lapses.
- ii. **Severe economic depression:** This could challenge insurers' financial stability and ability to pay claims.
- iii. **Climate change:** Increasingly severe wildfires may lead insurers to limit coverage.
- iv. **Limited coverage:** Standard policies might not cover all wildfire damages.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.3 Processes to identify, measure and monitor activities and exposures (continued)

Physical Risks on the Financials of Non-Financial Corporations (NFCs)

Average Annual Loss (AAL) is used to assess how climate related physical risks affect the turnover and assets of NFCs by translating hazard intensity into expected financial impacts, based on data aligned to the NGFS Current Policies pathway. For each hazard and sector, damage functions estimate the percentage impact on customers using event characteristics such as consecutive days above temperature thresholds in heatwaves—with results weighted by return period probabilities to produce location specific AAL, later aggregated to determine overall expected impacts. This approach shows how physical climate events can directly translate into financial losses and captures sector specific vulnerabilities, enabling a more accurate forward-looking assessment of exposure and resilience. Across the portfolio, the resulting expected losses indicate gradual but manageable increases in physical risks.

Environmental Risks on the Financials of NFCs

To assess environmental risks for NFCs, BOC PCL incorporated data on production losses caused by water scarcity, which directly impacts turnover in water intensive sectors. These estimates were combined with broader physical risk data to quantify how operational disruption translates into financial strain, with resulting declines in revenues and operational performance feeding into PD calculations. Integrated into BOC PCL's credit risk models and based on the NGFS Current Policies pathway (pessimistic scenario), this evidence-based approach captures how nature related risks in particular water scarcity could affect business continuity and financial resilience, with expected losses across the portfolio indicating gradual but manageable increases in exposure.

Environmental Risks on the Financials of NFCs

To assess environmental risks for NFCs, BOC PCL incorporated data on production losses caused by water scarcity, which directly impacts turnover in water intensive sectors. These estimates were combined with broader physical risk data to quantify how operational disruption translates into financial strain, with resulting declines in revenues and operational performance feeding into PD calculations. Integrated into BOC PCL's credit risk models and based on the NGFS Current Policies pathway (pessimistic scenario), this evidence-based approach captures how nature related risks in particular water scarcity could affect business continuity and financial resilience, with expected losses across the portfolio indicating gradual but manageable increases in exposure.

Transition Risk

For transition risk assessment, BOC PCL incorporated EPC information for its collateral portfolio, ESG scores from its ESG Due Diligence, and macro financial variables (GDP growth, Electricity, Oil, Carbon and Gas Price indices) sourced from the NGFS Current Policies scenario used for the baseline. EPCs indicate collateral energy efficiency and potential regulatory impacts, while ESG scores reflect borrower readiness for transition and sector specific vulnerabilities. These data are integrated into BOC PCL's models to quantify the impact of C&E risks on PD and LGD parameters. Additionally, the ASCOR Index is used to rank sovereign bonds based on transition risk across emissions pathways, climate policies and climate finance, providing further insight into sovereign level vulnerabilities.

Stressed Scenarios

To assess its resilience to climate change, the Group utilizes adverse climate scenarios in addition to its base-case assumptions as part of ICAAP for the short-term horizon and a complementary sensitivity analysis for the long-term horizon as described in the following sections. The adverse scenarios described below examine how severe transition policies and physical climate impacts could negatively affect the economy, asset values and the Group's financial position. The results of these exercises are used to assess potential risk exposure, ensure sufficient capital buffers and support forward planning under the Group's strategic ICAAP.

a) Short-Term Adverse Scenario

For the short-term adverse scenario, BOC PCL applies an RP500 (1 in 500 year) extreme physical event overlay onto the NGFS Current Policies baseline to reflect low probability, high severity acute shocks within the near-term capital horizon. The scenario assumes water scarcity impacts in year one, dry events in 2026 (heatwave and wildfire effects on turnover; wildfire on assets) and wet events in 2027 (flood impacts). These extreme hazards namely, heatwaves, droughts, wildfires and floods are applied to companies within the portfolio that exhibit high materiality. Drought prone sectors assessed uniformly given limited geographic differentiation in Cyprus, while using average drought impacts to avoid overestimation.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.3 Processes to identify, measure and monitor activities and exposures (continued)

Impacts on turnover are assumed to carry over into subsequent years (halved in 2027, quartered in 2028), while asset impacts apply only in the year of occurrence. This overlay approach is appropriate for Cyprus due to its high exposure to acute hazards particularly extreme heat, wildfires and flash flooding, with recent evidence indicating elevated wildfire risk and high relative burned area exposure compared to other European countries, supporting the need for explicit tail-event calibration rather than reliance on smooth macro pathways alone.

b) Long-term Stressed Sensitivity Analysis

Scenario analysis and climate risk stress testing are methods which assist in evaluating and managing the possible effects of C&E risks, to the Group's business strategy and financial planning decisions. By nature, this analysis is of an informative nature and focuses on the planning horizon of the Group's Financial plan. The sensitivity analysis carried out by the Bank is described below.

For the long-term stressed scenario, the BOC PCL applies the NGFS "Net Zero 2050" pathway to capture transition risk associated with a severe, economy-wide decarbonization trajectory that reaches global net zero CO₂ emissions around 2050, driven by stronger policies and innovation.

Even though the Net Zero 2050 scenario leads to lower physical climate damage than Current Policies, it is still a challenging adverse scenario for the Bank. This is because the transition to a low carbon economy can create short to medium term challenges such as higher carbon costs, faster technological change, and shifts in customer and investor behavior, which can affect valuations and credit risk.

Using the Net Zero 2050 climate scenario as a reference point in the Bank's resilience analysis does not necessarily mean forecasting the most likely scenario. It is about testing the Bank against a scenario that contains big financial risks stemming from high transition risks.

This is particularly relevant for Cyprus since it is highly exposed to climate sensitive and energy dependent sectors, such as Electricity, Transportation, Tourism, Construction, and Real Estate. Because these sectors rely heavily on fossil fuel-based activity, a rapid shift to a low carbon economy could significantly increase transition risks. These risks may weaken borrower affordability and reduce collateral values, even if the long-term transition ultimately benefits the economy.

In addition, the European policy direction toward climate neutrality by mid-century is explicitly recognized in supervisory context, reinforcing the relevance of a net-zero pathway as a credible stress for long-horizon resilience analysis.

The stress tests described above were included in the ICAAP process, which provided comfort that the Group has adequate capital to withstand these risks.

(ii) Capital resources and Mitigation actions

For the purposes of calculating Expected Credit Losses (ECL), the Group has incorporated C&E risks into its credit risk quantification framework utilising an internal ECL Calculator. The methodology captures the impact of C&E risks through forward-looking adjustments to key credit risk parameters, including PD and LGD. PDs are updated using projected customer credit ratings over the remaining loan lifetime, while LGDs are adjusted to reflect impacts on collateral values, incorporating both transition and physical risk effects. As a result of incorporating C&E risks into the ECL calculation, BOC PCL recognised a credit impairment loss of €4.3 million with a €21 million exposure transition to Stage 2.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.3 Processes to identify, measure and monitor activities and exposures (continued)

(iii) Resilience of Strategy and Business Model

BOCH has embedded climate resilience into its strategic planning. ESG is a core pillar of the Group's long-term strategy, with the ambition to achieve Net Zero by 2050. In line with this commitment, a decarbonisation target has been established for the mortgage portfolio, aligned with the IEA's B2DS. The lending strategy has been adjusted to support this target, with integration into the Financial Plan for 2026-2028. A long-term stressed sensitivity test has been conducted to ensure alignment with climate targets and resilience under varying transition risk scenarios.

The overall resilience of BOCH's business model is reinforced by a relatively low exposure to carbon-intensive sectors, such as coal, oil, and gas. Further mitigating measures include the introduction of new lending sector limits to carbon-intensive industries. These restrictions do not apply to green or transition financing or to entities operating in carbon-intensive sectors with an externally validated transition plan, thereby incentivizing customers to transition toward a low-carbon economy.

The current assessment under the long-term stressed sensitivity scenario in the above section, indicates that BOCH's business model remains resilient under a 2°C or lower climate scenario, supported by a risk assessment framework, portfolio management, and the integration of climate risk considerations into financial planning.

k. ILAAP Updates

BOC PCL considered the C&E risks in relation to liquidity risks through its liquidity Stress scenarios. The impact of C&E risks considered relate to transition risk and the climate physical risk of water scarcity and Wildfires.

It is assessed that the main risk arises from the possibility of increased deposit withdrawals by customers. Climate-related, acute, physical risk of Wildfires also impacts the valuation of the Cyprus Government bonds held in the liquidity buffer of the Bank.

With regards to deposit outflows, stress testing analysis was used to assess the impact effects on BOC PCL's liquidity, by focusing on the sectors expected to be impacted by transition risks. Higher outflows are assumed for the deposits of economic sectors which are expected to be more vulnerable to C&E risks and more specifically to transition risk.

In relation to the physical risk of Wildfires, upon realization of a severe hazard event, the liquidity position of the Bank might undergo stress since depositors might simultaneously withdraw deposits to address increased costs. Higher deposit withdrawals are assumed for deposits which have been assessed with high risk of wildfire. In relation to water scarcity risk, higher outflow of deposits is assumed for water intensive sectors, e.g. tourism, agriculture, manufacturing etc. However, it is highlighted that outflows due to C&E risks are significantly less than those caused due a loss of depositor confidence under the liquidity stress scenarios.

Losses in the market value of Cyprus Government bonds, which constitute c.23% of the marketable securities and c.7% of the total internal liquidity buffer, are anticipated due to extreme wildfires. As per stress scenarios assumptions, investors' confidence in the country's ability to meet its obligations deteriorates, negatively impacting the price of Cyprus government securities. This is attributed to unexpected increased government spending on relief efforts, support for the health system, and aid for severely impacted local sectors.

The BOC PCL maintains sufficient buffers to cover the potential negative impact of C&E risks under stress conditions.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.3 Processes to identify, measure and monitor activities and exposures (continued)

I. Risk Control, Monitoring and Reporting

BOC PCL has taken actions in relation to collecting C&E risk data for internal C&E risk monitoring and reporting purposes, across risk types as per the established ESG data working group.

16.1.3.4 Mitigation measures

Changing regulatory and legal requirements, increased stakeholder concern, shifts in consumer preferences, and the mandates on and regulation of existing products and services are just a few ways that BOC PCL can be exposed to climate risk. The RIMA process is fundamentally based on an inherent risk basis and the RIMA outcome as described in Section 16.1.3.6 are used to inform key stakeholders. These results guide decision-making and key processes at BOC PCL, promoting awareness of C&E risks. Management prioritizes measures to efficiently handle significant C&E risks, aiming to minimize their impact on BOC PCL's business model and operations.

Measures involve all management levels and are implemented across the three Lines of Defence. They address both downside risks (to minimize the impact of significant risk sources) and opportunities (to promote sustainability objectives and maximize positive impacts that offset adverse C&E risks). Specifically, the outcomes and conclusions of the C&E RIMA provide insights on:

- The existing risk types significantly affected by C&E risk drivers.
- The main regions/geographies most relevant to the BOC PCL's overall C&E risk profile.
- How C&E risk factors may impact key portfolios/business lines critical to the business model.
- The main economic activities (sectors) likely more vulnerable to C&E risk factors, both currently and in the future.
- The time horizons for potential risk impacts and the estimated impact size, considering BOC PCL's size and operations.
- The assumptions and conditions under which various C&E risk implications may be enhanced or mitigated.

In addition, BOC PCL has implemented several mitigation measures as follows:

- Establishment of both C&E physical and transition risks KPIs to comprehensively cover all material portfolios of BOC PCL; namely, Mortgages/Retail/Corporate and SME Division.
- Monitoring of the business, regulatory, and financial environment in relation to developments linked to ESG risk transmission channels is essential for promptly identifying necessary strategy changes and/or improvements.
- Internal control, monitoring and reporting from the Risk Management perspective, employing financial and non-financial KRIs and risk analytics, addressing holistically the C&E risks across primary risk types.
- Implementation of the E&S policy to manage environmental impacts of new lending.
- ESG Questionnaires aiming to identify ESG risks of counterparties and set mitigation action for risk reduction.
- Continuous enhancement of Credit granting processes in relation to ESG set of assessment criteria.
- Introduction of pricing arrangements, supporting the C&E objectives' achievement.
- Integration of transition risks in scenario analysis with regards to the repayment ability based on climate scenarios.
- Inclusion of C&E elements in the collateral policies and relevant valuation processes; specific provisions relating to energy efficiency and insurance policies, grounded on the indications of the RIMA on the secured portfolios (both in terms of transition and physical risk components).
- Presence of lending restrictions to carbon intensive sectors through both BOC PCL's Concentration and E&S policy.
- Setting of decarbonization targets in Mortgage asset class and other carbon concentrated sectors, where these targets will be incorporated into the Group's strategy and Financial Plan to reach Net-Zero by 2050.
- Regular monitoring of the new legal actions faced by BOC PCL to establish if any C&E related actions have materialised performed by the Legal Department.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.4 Mitigation Measures (continued)

- A Corporate Bond Investment Framework is in place and describes the approach followed for the risk assessment and exclusion of corporate bond investments in case of non-permissible industries.
- Development of a classification methodology to identify and monitor which positions of Corporate and Sovereign bonds are the most exposed to C&E risks based on transition risk.
- Ongoing monitoring of C&E risks arising from regulatory developments, macroeconomic trends, technological advances and geopolitical updates across short-, medium- and long-term time horizons through the BES process.
- Introduction of a Green Lending Policy that provides a framework for creating green loans and supporting environmentally sustainable projects.
- Identification of the main material physical risks events affecting each branch, own building as well as each building that it operated but is not owned by BOC PCL and has assigned the physical risks of the branches/owned buildings/ supplier's buildings, to the existing risk classification system.
- Business continuity plan in place captures the risks through the relevant business continuity procedures/manuals and branches relocation matrices that provide the required course of action in the case these events materialise.
- Implementation of the Reputational Risk Policy provides guidelines on the identification, quantification and management of reputational risks that might arise from the business activities of the Group, including all ESG related risks that may have a material impact on its reputation.
- Development of informative webinars that have been carried out for front line officers in relation to the ESG Due Diligence platform (Synesgy) whilst short speeches were given on the Bank's actions to address climate change in regional customer meetings.
- Implementation of informative webinars in collaboration with the Support CY and Cyprus Fire Service to increase physical risk awareness and inform both staff members and customers about prevention measures that can be taken in case of fires and floods.
- Development of webinars to increase customer awareness on ESG Due Diligence process and the utilisation of the Action Plan to improve their ESG performance.
- Enhancement of the Bank's identification approach to environmental risks to develop a nature-related heatmap based on the potential impacts and dependencies on nature at sectoral level.

16.1.3.5 Tools for identification, measurement and management of environmental risks

As already mentioned, MA, BES and UNEP FI's Impact Analysis Tool are used by BOC PCL to identify and manage any potential environmental risks associated with the operations and the portfolio of BOC PCL. Refer to Section 16.1.1.1 for more details on BES. Refer to Section 16.1.3.3 for more details on UNEP FI's impact analysis tools. The Bank is currently developing a stress test framework to incorporate identified climate risks as described in the above Climate Risk Sensitivity and Stress testing section.

16.1.3.6 Results and outcome of the risk tools implemented

BOC PCL considered the impact of climate-related, acute physical risks from its collateral portfolio in its 2025 ICAAP process as well as climate-related transition risks and environmentally related, acute physical risks driven by water scarcity. In terms of the top-down sensitivity analysis carried out in relation to transition and physical risks. These analyses are detailed in Section 16.1.3.3 above.

Materiality Assessment Results per Risk

The Group has taken several steps to ensure a concrete process by which C&E risks are fully considered and subsequently assessed in order to carry out a robust materiality assessment. When assessing the materiality of C&E risks, a proportionate approach was adopted, focusing only on the most negatively impactful risks. At the same time, it is noted that impacts were assessed on a gross/aggregated basis, by not considering any particular approaches to reduce potential risks.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.6 Results and outcome of the risk tools implemented (continued)

BOC PCL has established respective definitions of C&E risks and the results of the materiality assessment exercise regarding the impacts derived from relevant risks have been included to BOC PCL's Risk Register and Risk Inventory.

Moreover, the identified material risks are in the process of being incorporated into all relevant processes of the Risk Management Division including the ICAAP and ILAAP scenario analysis, thus BOC PCL will recognise various mitigation measures to ensure that such risks are controlled to the extent possible.

Credit Risk

As part of the credit risk analysis, both secured and unsecured exposures were assessed using quantitative and qualitative methods. The analysis indicated that climate related acute physical risks are material across all time horizons, supported by expert judgement, due to recent events, ongoing drought conditions, and the increased probability of major wildfire incidents in Cyprus. In addition, environmental chronic physical risks were also assessed as material across all time horizons, primarily due to the Bank's significant exposure to sectors who are considered water intensive. This is consistent with Cyprus experiencing four consecutive years of drought. With respect to climate related transition risks, Technology and Market risk categories are assessed as material in the medium and long term, reflected by the increased energy and raw material costs and the ongoing transition toward lower emission technologies.

Market Risk

For each of the identified C&E risks, a tailored combination of quantitative and qualitative methods was applied. Based on this analysis, climate physical risks, acute hazards were identified as material across all time horizons due to the very high exposure of the REMU portfolio to Wildfire risk. Wildfire has a relatively high impact and occurrence probability and thus can cause significant direct damage or broad devaluation of REMU properties. Other acute and chronic physical risks pose a non-material level of concern for the REMU portfolio.

The Market Risk in connection with the VaR of the HQLA portfolio has been assessed through a country heatmap of physical risk and was also identified as material. Furthermore, climate-related transition risks were assessed material, mainly due to the potential increase in energy and raw material costs, as well as transition to lower emission technologies over the medium- and long-term horizons. Environmental transition risks are assessed as non-material, but they need to be closely monitored due to potential stricter requirements in terms of environmental standards in the real estate sector.

Liquidity Risk

As part of the liquidity analysis, for each of the identified C&E risks, the combined materiality of the deposits and the value of HQLA portfolio was assessed with a tailored combination of quantitative and qualitative methods. The outcome of the assessment indicated that there are material climate-related transition risks driven by transition to lower-carbon emission technologies and market aspects such as increased energy and raw material costs. However, within climate-related physical risks, the acute risk driver Wildfire has not been identified as material but it could act as the dominant cause of liquidity issues due to possible simultaneous deposit withdrawals upon a widespread wildfire damage in Cyprus. Environmental acute risks, Earthquake, is not considered material since its likelihood is estimated as improbable for high magnitude events. Chronic physical risks are not relevant for liquidity considerations due to their progressive and long-term character.

Operational Risk

For each of the identified C&E risks, the materiality in connection with the operations of its owned and rented properties and third-party providers was assessed. Based on quantitative geolocation analysis and country physical and climate heatmap exercising, both physical and transitional risks have been assessed accordingly. Although the overall results indicate that C&E risks are non-material for BOC PCL, the need for close monitoring is required to ensure ongoing operational resilience.

Reputational Risk

Reputational Risk may be affected by C&E risks directly or through the realisation of other principal risks, and Strategic, Operational and Legal Risks. BOC PCL's reputation has been assessed in terms of its business operations and other key risk areas that could potentially impact BOC PCL's reputation. Overall, all C&E risks regarding physical and transition risks for Reputational risk have been assessed as non-material. This is the case as BOC PCL has a good prevention and recovery plan in place to minimize risks from acute

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.6 Results and outcome of the risk tools implemented (continued)

environmental hazards such as earthquakes. Additionally, BOC PCL's limited exposure in heavy manufacturing sectors reduces its exposure to transition risks. This strategic position aligns BOC PCL with evolving environmental standards and stakeholder expectations, thereby safeguarding its reputation.

Legal and Strategic Risk

The analysis of C&E risks as drivers of Legal and Strategic risk has been performed using qualitative analysis and expert judgment across all C&E risk types. The analysis regarding Legal Risk has been conducted based on various factors including, the regulatory requirements in Cyprus, shifts in consumer behaviour and any technological advancements. The assessment also included considerations of compliance, customer due diligence, and litigation risk. In terms of Strategic Risk, BOC PCL considers its exposure concentration, vulnerabilities and stakeholder engagement to proactively manage and mitigate potential risks to its strategic objectives.

The overarching conclusion indicates that the Legal Risk for BOC PCL is generally low across different C&E risk categories, however, climate-related transition risks are the higher risk from a reputational and legal perspective. It should be noted that BOC PCL has implemented measures such as continuous monitoring, preventive plans, and compliance checks to address potential legal implications arising from C&E factors. Ongoing efforts are directed at minimizing risks and ensuring compliance with evolving standards and regulations. Therefore, BOC PCL does not foresee worsening of the impact of C&E risk drivers over the time and it is expected that this impact will remain Low.

With regards to the Strategic risk, BOC PCL acknowledges that its concentration in Cyprus, with significant exposure to Real Estate, Construction, and Accommodation sectors, makes it vulnerable to the impact of climate-related physical risks, acute risks and primarily wildfire. In addition, most of the collaterals are real estate assets. As such, the impact of physical risks could affect BOC PCL and its customers going forward in terms of the value of these assets, insurance costs, and any associated cost to restore resulting damages from acute physical climate-related hazards. The primary concerns are the potential effects on the value of real estate assets and associated costs for restoring damages. It is expected that the impact of climate-related physical risk drivers will remain material in the future as well.

In conclusion, BOC PCL is proactively addressing C&E risk drivers, recognizing their potential impact on strategic risk. BOC PCL is implementing measures, engaging with stakeholders, and adapting its strategies to navigate the evolving landscape of climate and environmental challenges. Ongoing monitoring, customer engagement, and strategic adjustments are integral to BOC PCL's approach in managing these risks effectively.

BANK OF CYPRUS HOLDINGS GROUP

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

16.1.3.7 Data availability, quality and accuracy, and efforts to improve aspects

The Group determined to approach holistically the ESG and Climate Data, by developing an ESG and Climate Data Gap & Strategy. Specifically, the Group:

- i. Established an ESG Data Working Group.
- ii. Set up weekly catch-up calls for the ESG Data Working Group.
- iii. Identified Data Gaps under various workstreams (Disclosures, Risk Management, Group's Commitments, Business Strategy).
- iv. Determined the strategy to close the Gaps.
- v. Set indicative deadlines to close the gaps.
- vi. Discussed with several third-party software providers on ESG and Climate Risk Management platform and Disclosure platform.
- vii. Determined the follow up actions on the ESG and Climate Data Gap & Strategy.

The Group acknowledges that the ESG and Climate spectrum is extremely fast pacing, therefore the ESG and Climate Data Gap & Strategy is an ongoing process and further actions are expected to be performed in the future to further enhance the existing ESG and Climate Data Gap & Strategy. The ESG Data Gaps have been identified by focusing to the main ESG risks' workstreams run by the Group as well as strategic priorities:

- i. Corporate Sustainability Reporting Directive (Annual report) - Disclosures
- ii. Pillar 3 Disclosures on ESG risks (Semi-annually) - Disclosures
- iii. Sustainability Performance Report (Monitoring Key Performance Indicators) – Business Objectives
- iv. Climate Risk Report (Internal risk reporting) – Risk Management Needs
- v. ESG Questionnaires for Due Diligence purposes - Risk Management Needs
- vi. Physical Risks & Transition Risks assessment, quantification and management - Risk Management Needs
- vii. Sustainable Finance Framework - Business Objectives
- viii. Net Zero by 2050 – Group's Commitments
- ix. Financed Scope 3 GHG emissions estimation of loan and investment portfolio – Disclosures/ Risk Management Needs/Business Objectives
- x. EBA guidelines

ESG Data Sources to close the ESG Data Gaps:

- i. ESG questionnaires (Utilised for customer's Due Diligence)
- ii. Customer's disclosures
- iii. Third party provider (Acquisition of certain databases)
- iv. Public open sources (Online databases)
- v. Cyprus Government databases

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

(continued)

Refer to the following table for a summary of the ESG and Climate Data Gap & Strategy.

Financed Scope 3 GHG Emission on Mortgages & Commercial Real Estate				
Field Name	Level of Data	Source Document	Data Strategy - New lending	Data Strategy - Existing Lending
Property value at origination	Financed Property	Sales Agreement	Loan origination process	Use Collaterals
GHG Emissions per m ²		EPC		Access to EPC database of the Government
EPC rate		EPC		Access to EPC database of the Government
Floor Area (square meters)		Building permit		Use Collaterals
Under construction / Built		Building permit		Use Collaterals
Year of Construction		Sales Agreement		Use Collaterals
Property type		Building permit/Sales Agreement		Use Collaterals
# of Properties per account number		Account		Sales Agreement
Financed Scope 3 GHG Emission on Business Loans				
Total Debt	Account level	Financial Statements	Annual revision	Annual revision
Total Equity		Financial Statements	Annual revision	Annual revision
Total Assets		Financial Statements	Annual revision	Annual revision
Scope 1 GHG Emissions		ESG Questionnaires	Loan Origination	Annual Questionnaire run
Scope 2 GHG Emissions		ESG Questionnaires	Loan Origination	Annual Questionnaire run
Scope 3 GHG Emissions		ESG Questionnaires	Loan Origination	Annual Questionnaire run
Collaterals				
Field Name	Level of Data	Source Document	Data Strategy - New lending	Data Strategy - Existing Lending
Physical Risk - Acute	Collateral	Acquired from Vendor	Loan origination through an interactive tool	Existing property collaterals were mapped to physical risks manually. The data should be updated to collateral tables when the fields are ready
Physical Risk - Chronic				
Physical Hazard - Wildfire				
Physical Hazard - Landslide				
Physical Hazard - Sea Level Rise				
Physical Hazard - Flood				
Physical Hazard - Wind Gust				
Physical Hazard Score				
Climate Scenarios				
Climate Scenarios Time Horizon				
Property Use		Sales agreement/Valuation Report	Loan origination	Annual valuation of collaterals

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.8 Description of limits to environmental risks

BOCH has introduced lending restrictions on carbon intensive sectors. A limited amount of new lending for carbon intensive NACE sectors subject to a total (cumulative) exposure of €100 million as per the provisions of the policy, unless for green or transition purposes, will be allowed subject to approval by the RC or BOD BOCH's highest credit committee.

The restricted sectors relate to certain activities within:

- i. Coal Mining
- ii. Oil
- iii. Gas
- iv. Cement
- v. Iron & Steel & Aluminium
- vi. Power Generation (excluding renewables)

As also indicated BOCH earmarked exposures identified as vulnerable to transition risk as appropriate to receive transition finance. Furthermore, BOCH does have in place certain restrictions in lending as provided by the Environmental and Social Policy which is described below.

Environmental and Social (E&S) Policy

BOCH's E&S Policy aims to address E&S responsibilities by establishing an E&S management framework, fostering a culture of E&S responsibility, managing E&S risks in lending activities, training staff for policy implementation, and supporting customers address E&S matters. The policy guides departments involved in credit granting process and applies to granting new facilities to physical persons or legal entities secured by mortgage on immovable property and granting of new funded facilities to legal entities (excluding credit cards). The Policy does not apply to activities outside of Cyprus nor to restructuring cases unless new facilities are also requested with the restructuring.

Lending applications associated with activities included in the policy's Exclusion Sectors / Prohibited Activities (i.e. Thermal coal mining, upstream oil exploration etc.) are rejected and reported to RMD. For activities that are classified as low risk by EBRD's E&S Risk Categorization assessment a written customer confirmation for proper business conduct, relevant licenses and work permits must be obtained. For activities that are classified as Medium / High risk by EBRD's E&S Risk Categorization assessment a written customer confirmation for proper business conduct, relevant licenses and work permits must be obtained and an E&S study by external expert should be performed. In addition, other E&S checks should be performed, such as investigations into penalties, public complaints, adverse media reports, accidents / incidents, regulatory investigations and legal actions as well as site visits. The findings of the above actions must be stated in the credit application together with any corrective measures for the mitigation of the E&S risk.

The approving authority decides whether the E&S risk is acceptable and set specific terms and covenants to control any E&S risks as well as decides the frequency of future E&S studies (at least every 3 years for High-Risk E&S ratings).

E&S risks associated with a facility are monitored throughout its lifetime:

- As part of the normal monitoring of the facility (i.e. customer's credit review)
- When certain events qualify for re-evaluation of the E&S risks, such as change in business activity, expiry of operating permits, regulatory investigations, company investments / improvements, public complaints or adverse media reports, changes to environmental legislation, accidents / incidents and legal actions.

The Board bears the ultimate responsibility for the effective implementation of the Policy and for setting the right tone from the top. Credit Risk Control & Monitoring (CRC&M) reviews the Policy for proper governance and is responsible to examine adherence to policy and report divergence to guidelines, as part of on-going monitoring, through the review of credit applications on a sample basis, at regular intervals, as described in the Credit Monitoring Policy and CRC&M operations manual. Monitoring compliance with this Policy, on a regular basis, is a key factor in minimizing E&S risks.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.8 Description of limits to environmental risks (continued)

This is achieved through quality checks from CRC&M, which indicate the level of adherence to the Policy in order to take corrective action. Findings are communicated to Chief Risk Officer (CRO), and recommendations are made for enhancing compliance. RMD performs periodic (at least on an annual basis) monitoring on the E&S management procedures, to inform management and other stakeholders if policies and procedures have been implemented and are functioning as expected or if improvements or revisions are required. An annual report is submitted by CRM to the EBRD, covering the previous financial year and confirming that BOCH is in full compliance with EBRD's E&S requirements. The Board approves the Policy, RC reviews and recommends the Policy prior to the submission to the Board for approval, making sure, that sufficient, dependable, and secure internal procedures are in place to ensure that the Group complies with the Policy and monitoring the effective implementation of the Policy via the Control Functions. The policy is available for all employees through internal portal.

Details on the E&S Policy are provided directly to customers through Business lines as part of the loan origination process. On 4 September 2025, EBRD sold its stake in the BOCH. BOCH continued to have in place the existing E&S Policy, its procedures and actions that were introduced to meet EBRD expectations for the rest of the year, and will be revised in 2026. Due to the EBRD's exit, the annual report for the previous financial year was not requested by EBRD.

The above-mentioned actions are not associated with any capital or operating expenditure as are allocated on existing resources of the Group including Consumer Banking Division, Corporate & SME Division, International Banking Division, Credit Risk Control & Monitoring, Corporate & SME Credit Risk and Credit Sanctioning.

Concentration Risk Policy

The Concentration Policy applies at Group level and defines limits and the methodology for setting limits towards exposures in specific assets, liabilities and off-balance sheet items to ensure that concentration risk is within the Risk Appetite. The Concentration Risk Policy complements the efforts of managing negative impacts and risks associated with energy, climate change adaptation and climate change mitigation by restricting lending to carbon-intensive sectors, including oil, gas, manufacturing of cement, manufacturing of Iron & Steel & Aluminium and non-renewable power generation. Financing in these sectors is only permitted for carbon-intensive NACE sectors subject to a total (cumulative) exposure of €100m as per the provisions of this policy and for transition or green projects that align with the Group's sustainability objectives, subject to approval by its highest credit committees.

The Board approves the Policy and bears the ultimate responsibility for the effective implementation of the Policy and for setting the right tone from the top. Monitoring of Concentration Risk Policy is performed by:

1. CRC&M through monitoring of:
 - i. Large exposures on a monthly basis.
 - ii. Credit risk concentration limits through semi-annual quality assurance reviews.
2. Market & Liquidity Risk Department is responsible for monitoring country, counterparty risks, funding sources, derivatives and brokers.
3. Credit Risk Management Department is responsible for monitoring sector, collateral and name concentration. In general, monitoring is performed at least on a monthly basis and more frequently as required by the type of limit and Business Lines are informed accordingly, in order to ensure real time monitoring. As part of this process, data is sourced from the Data Warehouse system. Such data is governed by data quality rules put in place by the Data Quality & Governance department. RC is informed about the outcome of this monitoring.

The above-mentioned actions are not associated with any significant capital or operating expenditure. The resources allocated relate to existing resources including Consumer Banking Division, Corporate & SME Division, International Banking Division, Credit Risk Control & Monitoring, Corporate & SME Credit Risk and Credit Sanctioning.

The Concentration Risk Policy captures any single exposure or group of exposures with the potential to produce losses large enough, to threaten the financial institution's health, reputation, or ability to maintain its core operations. This Policy is aligned with the RAF and applies at Group level by defining limits and the methodology for limit setting for exposures in specific assets, liabilities and off-balance sheet items to ensure that the concentration risk is within the Group's Risk Appetite.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.1.3.8 Description of limits to environmental risks (continued)

Risk Appetite Framework (RAF)

The Group maintains a RAF which sets out the level of risk that the Group is willing to take in pursuit of its strategic objectives, outlining the key principles and rules that govern the risk appetite setting. It includes qualitative statements as well as quantitative measures expressed relative to Financial and Non-Financial risks. Within this context, the Group has incorporated in the RAF the below KRIs as already mentioned in Section 16.1.1.2:

- i. PEAR – Physical risks on immovable properties
- ii. PEAR – Transition risks of NFCs and;
- iii. PEAR – Water Scarcity risk on NFCs
- iv. Carbon Intensity Target on Mortgage Portfolio

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.2 Social Risk

16.2.1 Business strategy and processes

16.2.1.1 Business strategy to integrate social factors and risks

Privacy

In 2025, the Group maintained a Personal Data Protection Compliance Policy, to align with relevant regulations, including the EU General Data Protection Regulation (GDPR) and national laws such as the Protection of Natural Persons regarding the Processing of Personal Data Law 125(1)/2018 and section 106 of the 'Regulation of Electronic Communications and Postal Services Law 112(I)/2014', as well as the relevant guidelines issued by the CPDP from time to time. This policy outlined the Group's commitment in protecting the personal data of customers, employees, suppliers, and business partners, ensuring that data collection, use, and retention are lawful, transparent, and aligned with GDPR principles. Protecting the security and privacy of personal data is important to the Group, in order to conduct its business activities in the context of the envisaged privacy culture. The Board and Senior Management were responsible to oversee the Group's compliance with this policy.

Additionally, they had the ultimate responsibility for the implementation and adherence to this policy throughout the Group, and the imposition of any remedial action. From 2025 onwards BOC and its subsidiaries must maintain their own Personal Data Protection Compliance Policy. The management and the Board of each subsidiary is ultimately responsible for the implementation of this policy and to ensure, at entity level, that there are adequate and effective procedures in place for its implementation and ongoing monitoring to its adherence. The policy is readily available to all employees through internal portal and to any affected stakeholder through Group's website.

The Group complies with GDPR requirements, ensuring transparency and accountability in employee data processing activities. Each subsidiary publishes its own Employee Privacy Notice. The Employee Privacy Notices, which were last updated in 2025, outlines how employee data is collected, processed, and protected. Each notice is readily accessible on the Group's internal portal, ensuring employees are informed of their data privacy rights at all times.

The Group collects and processes personal data strictly as necessary for its business activities, in accordance with legal obligations, contractual requirements, legitimate interests, or for those cases where employee consent is required. Data collection is limited to relevant and essential information, with retention periods aligned to guidelines provided by the Local CPDP. To ensure lawful processing, employees are informed of their right to withdraw consent at any time, and specific consent is appropriately secured and documented when required.

Employees can raise concerns about how employee data are collected, processed or protected by emailing a dedicated Human Resources address for GDPR matters or contacting the CPDP, as described in the Employee privacy notice. In the event of suspected or actual data breaches, employees are required to report such incidents to the respective subsidiary's Data Protection Officer (DPO), within a maximum timeframe of 24 hours. The reporting can be done through designated communication channels, including email or phone and after completing a form (form for reporting a possible personal data breach).

In case where the data breach incident affects a large volume (combination between data subjects affected and systems affected or could be affected) of customers/employees, the Information Security Department is notified, and the Security Incident Response Plan procedures are initiated. The Group has established an incident response plan that includes containment, investigation and notification procedures in the event of data breach. The plan is annually tested and updated to ensure effectiveness and compliance with applicable laws and regulations. To facilitate effective reporting of data breaches, the Group has established a guidance that serves as a reference for all employees and is embedded in the Employee Portal. This guidance outlines the criteria and procedures for identifying and reporting reportable data breaches, empowering employees to promptly and accurately report any incidents.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.2.1.1. Business strategy to integrate social factors and risks (continued)

The Group in 2025 had 3 fines relating to GDPR violations (Regulation 2016/679) which relate to incidents reported in 2023 and are not deemed financially material (2024: zero). The fines relate to breach of principles of personal data processing and transparency associated with the clients by the employees of the Group.

In addition, the Group employs Data Protection Impact Assessments (DPIAs) at all stages of data processing follows a data minimization strategy. DPIAs support the identification of potential data privacy risks and comply with data protection obligations and meet individuals' expectations on privacy. The DPIA is initiated whenever a new process/ product or system that involves personal data is implemented and it shall be revisited/updated when there is a change in the risk profile of the process (e.g. new vendor, change of the procedure etc.). The procedure relating to DPIA is analysed in the relevant circular which is readily available in the Internal Employee Portal.

Internal circulars and manuals are annually reviewed and updated to ensure adherence from own workforce. Each subsidiary's DPO is responsible to oversee GDPR compliance, provide guidance on data protection policies, and ensure effective handling of data breaches and privacy complaints as part of the complaints handling procedure. The DPO advises the Company on GDPR obligations, monitors compliance, oversees DPIAs, consults on high-risk processing, and liaises with supervisory authorities. The DPO also ensures the resolution of data breaches and privacy complaints, coordinating with other Group DPOs to address compliance issues. The Chief Information Security Officer (CISO) works closely with the DPO to address and mitigate data security incidents. The Group leverages any possible synergies where any significant privacy matter threatening the reputation of the Group entities is promptly escalated to the Bank DPO. This collaborative approach reflects the Group's commitment to maintaining a high standard of data privacy and security, protecting employees' personal data, and adhering to all regulatory requirements.

The Group tracks the effectiveness of its privacy actions on a subsidiary level through monitoring reports submitted on a quarterly basis by the DPO to the respective Board through AC. Metrics such as the number of reported incidents, participation rates in training programs, and vendor compliance evaluations enhance processes. The incident response plan undergoes annual testing to ensure readiness, while privacy statements and data-handling procedures are reviewed annually to maintain compliance with the regulations.

The Internal Audit Division is responsible for providing independent and objective assurance to the Board, through the AC, and to management, by assessing the effectiveness of governance, risk management, and control processes related to this policy and informs the AC of any findings and relevant recommendations.

BOCH invests in privacy management through cybersecurity tools, dedicated DPOs for each legal entity handling personal data, and cross-departmental collaboration across Legal, IT, HR, Internal Audit, Compliance, Procurement, Vendor Management and Risk Management. This approach aims to mitigate risks, enhance privacy practices, and maintain stakeholder trust.

Information Technology and Security

The Group's Information Security Policy further outlines a structured management approach, to address information and cybersecurity risks and events associated with the Group's technology systems and information assets.

The purpose of the Policy is to provide an unambiguous set of standards, guidelines, controls, measures and requirements designed to achieve a desired level of information security across all business and technical layers of the Group. In essence, it governs the direction of all activities in the areas of information security and acts as an umbrella document to all other Group Security Policies and associated standards, aiming to contribute to a safe and responsible Information Security Management System (ISMS) within the Group, while supporting the overall business objectives and goals. The scope of this policy includes all subsidiaries of the Group and all individuals working at all levels and grades.

The functional scope of the policy includes all assets (in the broadest sense, e.g. systems, platforms, networks, applications, documents, devices, etc.) that are used to store, process and transport Group's information and the information belonging to the customers, as well as facilities, equipment, resources, people and property.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.2.1.1. Business strategy to integrate social factors and risks (continued)

This Policy is approved by the Group Board Risk Committee (RC) and reviewed on an annual basis, adhering to internal guidelines for continued pertinence of the business documentation, to reflect in the policies and procedures the latest regulatory requirements and any changed business processes and circumstances.

BOCH completed the acquisition of 100% of Ethniki Insurance Cyprus Ltd on 25 July 2025, following a binding agreement signed with Ethniki Hellenic General Insurance Company S.A. on 14 April 2025. Ethniki Insurance Cyprus has been fully integrated by 31 December 2025 to the Group's insurance companies Eurolife Ltd (EuroLife) and General Insurance of Cyprus Ltd (Genikes Insurance). During the transitional period, from the date of acquisition until full integration of Ethniki Insurance Cyprus with Eurolife and General Insurance, there were procedures in place to ensure consistent approach of Ethniki Insurance Cyprus with the BOCH and its subsidiaries Personal Data Protection Compliance Policy and Information Security Policy.

The Group has adopted an Information Security Management System (ISMS), in line with acknowledged international standards (ISO/IEC 27001, NIST, CSA), as a basis for the structuring and maintaining of a system of measures to safeguard confidentiality, integrity and availability of its information assets and information systems. The ISMS provides a set of policies, frameworks, standards, guidelines, controls, measures and requirements designed to achieve a desired level of information security across all business and technical layers of the Group.

The Group is committed in protecting the security of its business information. For the purposes of meeting that business objective the Group established the Information Security Division with the IT related personnel and implemented, maintained an ISMS based on internationally acknowledged standards. Information Security team is constantly monitoring cyber security threats (either internal or external, malicious or accidental) and invests in cyber security measures and controls to protect, prevent, and respond against such threats to Group systems and information. The ISMS ensures the protection of information assets through key security controls:

- Risk Management: Identifies, assesses, and mitigates security risks.
- Information Protection: Implements measures to classify, handle, and secure data.
- Supplier Security: Ensures third-party security compliance.
- Human Resources Security: Trains employees and contractors on security responsibilities.
- Physical Security: Protects assets from unauthorized access and disruptions.
- Operations Security: Secures IT infrastructure, networks, and communication channels.
- Cloud Security: Maintains data integrity and security in cloud environments.
- Mobile Security: Controls for secure mobile device management.
- Access Management: Restricts system and data access to authorized users.
- System Security: Integrates security in system development and maintenance.
- Backup Management: Ensures data recovery through secure backups.
- Data Retention: Defines retention and archival policies.
- Data Leakage Prevention: Detects and prevents unauthorized data distribution.
- Patch Management: Regularly updates systems to address vulnerabilities.
- Incident Response: Implements processes for managing security incidents.
- Business Continuity: Ensures resilience against data loss and disruptions.

The Group implements processes to conduct periodic reviews to evaluate the effectiveness of implemented information security controls in accordance with current risk appetite and prioritise corrective actions. The reviews combine several different approaches, to improve situational awareness on the status of security controls across the Group's environment and increase insights into the processes used to manage organisational security. Those reviews include Information security assessments, Information security controls maturity assessment, Vulnerability and Security Configuration assessments/scanning, Enterprise penetration testing and Penetration testing of specific applications/systems.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.2.1.1. Business strategy to integrate social factors and risks (continued)

Where a control is found to operate outside the Group's defined risk appetite:

- A risk assessment should be performed, and risks should be managed using the procedure defined in the Information Security Risk Management Methodology.
- Each control owner should aim to reduce the identified exposure within the defined risk appetite, in line with the defined risk remediation targets.

The Board Technology Committee (TC) supports the Board in fulfilling the oversight responsibilities with respect to the overall role of technology, including information security. The RC has the responsibility for the oversight of Operational and Information Security risks. The TC is informed on the application of Information Security policies. No significant operational expenditures and/or capital expenditures are associated with the above-mentioned actions.

System Downtime and Disaster risks

The Group's wide range of financial products and services change from time to time in order to adapt to the needs of its customers, whether businesses or individuals, and aim to be in line with the changes in the broader economy and environment. However, access to products and services can be significantly affected by system downtimes, posing a material risk to the Group's operations. Such downtimes disrupt customer services and hinder transaction capabilities, leading to potential revenue losses, customer dissatisfaction, and reputational damage. To address these risks, the Group has adopted a Business Continuity Management & Disaster Recovery Policy that demonstrates its commitment to maintaining a Business Continuity Management System (BCMS). This policy applies to all employees within the Group that support the delivery of financial products and services to consumers and businesses. It aims to support the continued availability of essential banking functions during disruptive events, safeguarding customer access and operational stability.

This internal policy approved by the Board through RC, establishes the Group's commitment to the maintenance of a BCMS to meet the Group's business continuity objectives as well as statutory, regulatory, and contractual obligations. The BCMS framework is designed according to the standards set by ISO 22301:2019 "Societal security - Business continuity management systems - Requirements" and reflects the Digital Operational Resilience Act (DORA) alongside applicable Central Bank of Cyprus directives. BCMS aims to safeguard the interests of key stakeholders, reputation, brand and value creating-activities and ensures a structured and reliable approach to mitigating the risks associated with service disruptions. The overall responsibility for approving and monitoring the Group's strategy and policy for managing Business Continuity risk lies with the Board which exercises this responsibility through the RC. The Policy, circulars and procedures are readily available on the Employee Internal Portal. In addition, the Head Business Continuity Risk Management conducts BCMS workshops and training programs to ensure that the business continuity liaisons who are assigned business continuity responsibilities are competent to perform the required tasks.

During the transitional period, from the date of acquisition until full integration of Ethniki Insurance Cyprus with Eurolife and General Insurance, there were procedures in place to ensure consistent approach of Ethniki Insurance Cyprus with the BOCH Business Continuity Management Policy.

To manage interruptions of critical IT systems and to avoid loss of data and services, as an after effect of natural or man-made disasters, the Group implements a Disaster Recovery Plan (DRP). The DRP applies both to major events that deny access to data centres for an extended period, and to events that may deny access to parts of the data centres or certain systems. In that respect, the DRP is IT focused and designed to restore operability of IT systems and applications at an alternative site, with the aim to mitigate any effects a disaster might have upon the on-going operations of the Group. The Executive Director Technology & Operations is responsible for reviewing, amending and updating the Group's DRP for the recovery of key IT systems, telecommunications and data to support the implementation of recovery locations in the context of Business Continuity planning.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.2.1.1. Business strategy to integrate social factors and risks (continued)

The DRP covers all relevant risk and incident types (i.e., flood, fire, tornado, electrical storms, act of sabotage, electrical power failure, loss of communications network services), including recovery options and strategies for cyber-security scenarios. The plan incorporates and define the priorities in recovering IT systems, considering their interdependencies. Procedures for recovery priority identification and management are defined and periodically reviewed. Ownership of the DRP is assigned to the Disaster Recovery Committee (DRC), which nominates a Disaster Recovery Coordinator (DR Coordinator) to undertake responsibility for the efficient maintenance of the DRP. The DRP is tested annually for the identification and implementation of necessary remedial actions on any issues recognised during the test. The Group must maintain Crisis Management processes towards the effective and efficient management of any crisis events in order to mitigate, as much as possible, the impact on the organization, its stakeholders and its customers.

16.2.1.2 Objectives, targets and limits

Privacy

There is no set measurable, time-bound and outcome-oriented target associated with data protection and privacy however, the Group nevertheless tracks the effectiveness of these actions through quarterly reporting to EXCO and AC. Metrics reported include the number of data incidents, employee participation in privacy and information security training programs. Board, Management and all staff participate, in 2025, in Information security training (4,460 hours (2024: 9,889 hours)), GDPR training (5,673 hours (2024: 107 hours)) and use of personal data training (95 hours (2024: 1,270.5 hours)).

Personal data leakage reported to the Commissioner for Personal Data Protection

Metrics associated with information security and GDPR training hours as well as personal data leakage reported to the CPDP, are not validated by an external body.

In line with its Risk Appetite Statement (RAS), the Group has adopted the following qualitative stances associated with data privacy and information security:

- **Zero Tolerance for Privacy Risks:** BOCH maintains a strict no-tolerance policy for any non-compliance with GDPR and expects full adherence to legal and regulatory requirements across all operations.
- **No Data Leakage:** The Group has zero tolerance to data leakage, whether due to system vulnerabilities or employee mishandling. Rigorous protocols are in place to prevent and respond to potential breaches.
- **Vendor Compliance:** BOCH does not engage with vendors who lack robust GDPR-aligned procedures and practices. All third-party relationships are subject to assessments to ensure compliance with data protection standards.
- **Immediate Response to Data Subject Rights:** The Bank has a zero-tolerance approach to delays or avoidance in responding to data subject rights under GDPR. Processes are streamlined to ensure timely action on data access, correction, or deletion requests.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.2.1.2. Objectives, targets and limits (continued)

The process for setting the above-mentioned qualitative metrics is described in the Risk Appetite Framework of the Group. The objective of the Risk Appetite Framework (RAF) is to set out the level of risk that the Group is willing to accept in pursuit of its strategic objectives, outlining the key principles and rules that govern the risk appetite setting. It comprises the Risk Appetite Statement (RAS), the associated policies and limits where appropriate, as well as the roles and responsibilities for the implementation and monitoring of the RAF.

Information Security

There is no set measurable, time-bound, outcome-oriented target however, the Group nevertheless tracks the effectiveness of these actions through established processes, procedures and KRIs. The Group maintains a leakage registry to document and monitor data incidents, reviewed quarterly and reported to senior management and the AC. Data subject requests and complaints are tracked to ensure resolution. Cyber-attacks and resolutions are recorded, with updates provided to the DPO and regulatory authorities. The Group also maintains a Record of Processing Activities (RoPA), conducts Data Protection Impact Assessments (DPIAs), updates GDPR-related actions, including Privacy Statement revisions and provides internal training. Moreover, the Group's Risk Appetite Statement (RAS) reflects a zero-tolerance approach to privacy and data protection risks. Board, Management and all staff participate, in 2025, in Information security training (4,460 hours (2024: 9,889 hours)), GDPR training (5,673 hours (2024: 107 hours)) and use of personal data training (95 hours (2024: 1,207.5 hours)).

System Downtime and Disaster risks

There are no measurable, time-bound and outcome-oriented targets on system downtime and disaster risks however, the Group tracks effectiveness of these actions through established escalation arrangements to CEO, CRO and Deputy CEO in case of a critical impact incident. The Group, in 2025, conducted Business Continuity Management training (1,310.5 hours in 2025 (2024: 1,299.5 hours)) and Disaster Recovery training (131 hours in 2025 (2024: 161 hours)). One system downtime incident was reported, in 2025, to CBC (2024: 5). No disaster incidents occurred in 2025 and 2024.

16.2.1.3 Engagement with counterparties

Social risk assessment at loan origination

As indicated under the environmental risks in Section 16.1.3.3 the Group has implemented an ESG questionnaire within the context of its underwriting processes. The completion of the ESG questionnaire results in an action plan with suggested actions that each customer can take to improve its practices around social risks such as, for instance, the adoption of ISO26000 for social responsibility or 450001 for occupational health and safety etc. The action plan will allow the Group to engage with its counterparties with the aim to remediate social risks.

In addition, very few companies in Cyprus have been required to publish Sustainability Reports, as only a small number met the NFRD criteria. With the Omnibus I amendments to the CSRD published on 26 February 2026 and effective from 18 March 2026 the scope has been significantly narrowed. Under the revised CSRD, only undertakings with over €450 million turnover and more than 1,000 employees remain in scope, while "wave one" entities falling outside these thresholds may be exempted for 2025 and 2026. Mandatory reporting for in scope companies begins for financial years starting 1 January 2027, with publication in 2028. In addition, Cyprus officially transposed the Corporate Sustainability Reporting Directive (CSRD) into national law on 29 July 2025. As a result, improved sustainability data from loan origination is expected from 2028 onwards, although most Cypriot SMEs will remain outside the regime. The Group will continue enhancing credit assessment practices, including reviewing the counterparty's governing body regarding sustainability governance and non-financial reporting responsibilities.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.2.1.3. Engagement with counterparties (continued)

Environmental and Social Policy

Similarly, as described under Section 16.1.3.8 an Environmental and Social Policy is in place in relation to its lending activities which requires to ensure acceptable of E&S risks. Examples of activities that are excluded through the policy relevant to social risks are:

- i. Activities involving child or forced labour, or violations of human rights
- ii. Activities prohibited by host country legislation or international conventions relating to the protection of biodiversity resources or cultural heritage
- iii. Forced evictions
- iv. Production and trafficking of military goods and lethal weapons, the use of which violates basic humanitarian principles

Hence, all lending applications regarding for the above activities, are rejected and no lending is allowed.

Sourcing and Procurement & Vendor Management Policy

Under the Sourcing and Procurement & Vendor Management Policy the Group established specific ESG criteria that the vendors or suppliers must adhere to. Specifically, suppliers must adhere all the principles regarding Labour, Human rights, ethics, working conditions and Health & Safety matters.

Labour / Human Rights / Ethics

- i. Suppliers must respect internationally recognized human rights in all areas of operation.
- ii. Suppliers should take actions to remedy adverse human rights impact.
- iii. Suppliers must ensure that child and underage labour is not used, in accordance with the ILO Minimum Age Convention.
- iv. Suppliers should not engage forced labour, slave labour, or any other non-voluntary labour and should treat all employees with respect and dignity, in accordance with the ILO Forced Labour Convention (No 29) and the Abolition of Forced Labour Convention (No 105).
- v. Supplier standards should cover the prohibition of discrimination regarding grounds of discrimination (e.g., age, gender, and ethnic origin) and aspects of employment (e.g., recruitment, promotion, and remuneration).

Working Conditions

- i. Suppliers should provide all employees with at least the minimum wage according to the national legislation.
- ii. Suppliers must ensure that wages meet legally mandated minimums and industry standards, without unauthorized deductions.
- iii. Suppliers must respect the right to freedom of association and collective bargaining of their employees.
- iv. Suppliers must ensure that working hours are in accordance with the national legislation.
- v. Suppliers should ensure that employees under the age of eighteen will not be engaged in hazardous or heavy work.

Health & Safety

Suppliers should comply with Health and Safety requirements, providing a healthy and safe working environment to their employees, adhering to all relevant Health & Safety laws and regulations.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.2.2 Governance

16.2.2.1 Responsibilities of the management body for setting the risk framework

The Sustainability Committee as described under Section 16.1.2.1 has the oversight of the totality of the ESG agenda of the Group. The same governance arrangements remain in relation to the interaction with the Board as well. For Information Security, Privacy and System Downtime risks different Governance arrangements apply which are described in Sections 16.2.1.1 and 16.2.1.2 above.

Commitment to Human Rights – Own Workforce

Respect for human rights is integrated into the Group’s operational policies and procedures. The Group’s Code of Ethics and Code of Conduct outline defined standards for behaviour, responsibilities, and ethical practices applicable to all employees. These frameworks are supported by reporting mechanisms and investigation procedures to address issues and ensure equitable treatment. BOCH engages its workforce through channels designed to promote accountability and inclusion, as detailed below, supporting a culture aligned with these principles.

The Group’s approach to human rights is based on internationally recognised frameworks, including the International Bill of Human Rights and international directives, principles and initiatives to protect human rights, such as the Core Labour Conventions of the International Labour Organisation (ILO). The Group adheres to the ILO Declaration on Fundamental Principles and Rights at Work, integrating its principles into various aspects of operations. For instance, the Group’s collective agreement and relationship with the trade union address the first principle of the Declaration. Fair and inclusive hiring practices ensure compliance with the second and third principles, while health and safety measures, supported by the “Well at Work” wellbeing programme and Health & Safety Management system, reflect the fifth principle. Group’s policies and practices are aligned with ILO Declaration on Fundamental Principles and Rights at Work so by monitoring adherence to such policies and practises also align with ILO. Additionally, the OECD Guidelines for Multinational Enterprises are encompassed within the Group’s Code of Conduct, Code of Ethics, and Employee Handbook. These frameworks establish clear expectations for ethical behaviour and corporate responsibility. Violations are addressed through the Group’s formal disciplinary process.

BOCH’s existing policies and processes, including the Recruitment Policy, Code of Ethics, and Code of Conduct, already address concerns related to human trafficking, forced labour, and child labour, ensuring responsible management. However, to enhance clarity and explicitly reinforce these commitments, the Group will update its policies and processes by the end of 2026.

During the transitional period, from the date of acquisition until full integration of Ethniki Insurance Cyprus with Eurolife and General Insurance, there were procedures in place to ensure consistent approach of Ethniki Insurance Cyprus with the BOCH Group Code of Ethics and Code of Conduct.

BOCH maintains a zero-tolerance policy toward discrimination of any kind. This includes, but is not limited to, discrimination based on race, ethnicity, colour, sex, sexual orientation, gender identity, disability, age, religion, political opinion, national origin, social background, or any other grounds. Similarly, harassment in any form—whether verbal, physical, visual, sexual, or bullying—is strictly prohibited. In addition, decisions related to recruitment, promotion, and remuneration are based solely on objective criteria such as ability, ethics, and experience. The Group through the Code of Conduct and Anti-Sexual Harassment Code of Practice set clear standards for employee behaviour and responsibilities against any form of discrimination. One potential incident regarding human rights violation was reported during the period which was strictly handled in accordance to the aforementioned policies.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.2.2.1 Responsibilities of the management body for setting the risk framework (continued)

The Group promotes integrity, as a core organisational value, through the implementation of the Disciplinary code. This framework ensures timely detection and mitigation of any violations related to the Code of Conduct, Code of Ethics, Anti-Sexual Harassment Code, internal policies, employment terms, circulars and any other decisions of the Group associated with own workforce. To address significant breaches, the Group has established the Disciplinary Committee. Misconduct, breaches or violations can be reported through various channels:

- Whistleblowing channel;
- Planned or unplanned internal audits;
- Complaints;
- Other means (Direct communication to Branch Manager, Manager, Director or through Internet Banking).

The Internal Audit Division evaluates whether incidents reported should be investigated. For those necessary, Internal Audit investigates the incidents reported and submits the Investigation report, among others to the Executive Director People & Change, if a violation is identified. If the investigation confirms a violation, the report is escalated to the Disciplinary Committee. For breaches relating to the Code of Conduct or Code of Ethics (or any other matter associated with HR) the matter is investigated by the relevant HR department and the relevant report is submitted as described above. A Senior Management committee decides whether the matter requires escalation to the Disciplinary Committee, which is responsible for determining appropriate disciplinary actions.

Commitment to Human Rights – Customers

At BOCH, respecting human rights of consumers and end-users is embedded in the Group's Code of Ethics, Code of Conduct, and organisational values. These commitments are integrated into the Group's strategy and business model to ensure that the interests, views, and rights of consumers and end-users are considered in the decision-making processes. BOCH's policies follow internationally recognised frameworks, including the UN Guiding Principles on Business and Human Rights, the ILO Core Labour Conventions, the Universal Declaration of Human Rights (UDHR), and the OECD Guidelines for Multinational Enterprises. BOCH has established formal policies to ensure ethical practices, consumer protection, and operational transparency. The Customer Complaints Management Policy provides a structured framework for addressing and resolving complaints. The Group Information Security Policy sets out safeguards for customer data breaches, and GDPR compliance. These policies are supported by the Code of Ethics and Code of Conduct, embedding fairness, accountability, and respect for consumer and end-user rights into all operations. The Group has no reported cases of non-compliance with the UN Guiding Principles on Business and Human Rights, the ILO Declaration on Fundamental Principles and Rights at Work, or the OECD Guidelines for Multinational Enterprises involving consumers or end-users have been reported in its downstream value chain in 2025 and 2024. Additionally, there were no reported severe human rights issues or reported incidents connected to consumers or end-users.

16.2.2.2 Integration of measures to manage social factors and risks in internal governance arrangements

The Group has dedicated resources for the handling of ESG issues as described under Section 16.1.2.2 Integration of measures to manage environmental factors and risks in internal governance arrangements.

16.2.2.3 Lines of reporting

The Group established Sustainability performance report which monitors the performance of the Bank against Social and Governance targets. For more details refer to Section 16.1.2.3 Lines of reporting.

16.2.2.4 Alignment of the remuneration policy with institution's social risk-related objectives

For the alignment of the remuneration policy with the Group's social risk refer to Section 16.1.2.4 Alignment of the remuneration policy with institution's environmental risk-related objectives.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.2.3 Risk Management

16.2.3.1 Tools, identification, measurement, monitoring and mitigation of social risks

The United Nations Environment – Finance Initiative (UNEPFI) Impact Analysis Tool has been employed to obtain insights on both the actual and potential, positive and negative impacts of BOC PCL's portfolio towards Social sub-sub-topics as determined by ESRS. The UNEP-FI impact analysis tool is used as the basis for Double Materiality Assessment under ESRS. Social risks associated with the counterparties were assessed on a qualitative basis through expert judgement during the Double Materiality Assessment. BOC PCL has defined the transmission channels with regards to the social risks based on the ESRS topic areas as opposed by the CSRD Directive and disclosed in Section 16.1.3. Additional work is expected to be carried out going forward aiming to identify social risks the Group is exposed through its counterparties and the implementation of limits were deemed material.

Social risks identified by the Group following the Double Materiality Assessment as mentioned in Section 16.2.1, are understood to potentially impact, as risk drivers, the main prudential risks such as credit, market, liquidity and other non-financial risks including reputational risk.

The Group through the Lending Policy which established the ESG Due Diligence procedures in loan origination process, integrates social performance of its counterparties into risk management processes. The ESG Questionnaires which are part of the ESG Due Diligence process incorporate the following social aspects assessing counterparties performance in social spectrum:

- Whether that counterparties have engagement channels with employees, suppliers, communities, customers, trade unions;
- Whether counterparties conduct, customer's satisfactory surveys;
- Whether the counterparties assess the ESG performance of their supply chain;
- Number of employees split between Male and Female;
- % difference between weighted average salary between Female and Male employees;
- % of employees based on their employment type (permanent etc.);
- Whether the counterparty provides any other benefits to its employees (Bonus, insurance etc.);
- Whether the counterparty was involved in philanthropy, school or community programs;
- Whether the counterparty made monetary donations for the benefit of local community.

16.2.3.2 Setting limits to social risk

Based on the Double Materiality Assessment performed the limits associated with the material social risks were disclosed in section 16.2.1.2.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.3 Governance Risk

16.3.1 Governance

The Sustainability Committee as described under the Section 16.1.2.1 has the oversight of the ESG agenda of the Group. The same governance arrangements remain in relation to the interaction with the Board as well.

16.3.2 Integration of Governance performance of counterparties in Governance arrangements

The Group through the Lending Policy which established the ESG Due Diligence procedures in loan origination process, integrates the ESG governance performance of its counterparties into its governance arrangements. For details on the Governance areas of the counterparty covered under the ESG Due Diligence process refer to section 16.3.3. In addition, following Double Materiality Assessment performed in accordance with ESRS identified that Financial Crime, Fraud and Compliance with laws and regulations are material for the Group. The Group establishes and implements actions, procedures and policies to ensure that those risks are managed, and monitoring of such risks is part of Group's governance arrangements.

In addition, very few companies in Cyprus have been required to publish Sustainability Reports, as only a small number met the NFRD criteria. With the Omnibus I amendments to the CSRD published on 26 February 2026 and effective from 18 March 2026 the scope has been significantly narrowed. Under the revised CSRD, only undertakings with over €450 million turnover and more than 1,000 employees remain in scope, while "wave one" entities falling outside these thresholds may be exempted for 2025 and 2026. Mandatory reporting for in scope companies begins for financial years starting 1 January 2027, with publication in 2028.

Cyprus officially transposed the Corporate Sustainability Reporting Directive (CSRD) into national law on 29 July 2025. As a result, improved sustainability data from loan origination is expected from 2028 onwards, although most Cypriot SMEs will remain outside the regime. The Group will continue enhancing credit assessment practices, including reviewing the counterparty's governing body regarding sustainability governance and non-financial reporting responsibilities.

Financial Crime and Fraud

This section concerns the Group's reporting related to the work conducted to combat financial crime. This section describes financial crime, defined as money laundering, financing of terrorism, bribery and corruption and fraud.

The Group adopted a Policy relating to the Prevention of Money Laundering and Terrorism Financing. The purpose of this policy is to set the minimum standards and provide general guidance and clarity on Group's effort to prevent and suppress money laundering, terrorist financing and other illegal activities and to ensure compliance with all applicable legal and regulatory requirements. The Group is committed in the fight against money laundering and terrorism financing and institutes appropriate procedures to comply with relevant legislation, regulations, guidelines and best practices, and exercises due diligence to deter the use of its services and products by money launderers and those involved in illegal activities including the financing of terrorism. The policy is readily available for all employees in the Group's internal portal and Group's website for any affected stakeholders. The policy covers both upstream and downstream value chain.

The main objectives of the principles incorporated in this Policy are to:

- Take all reasonable steps and exercise Due Diligence to deter the use of Group's systems and processes by money launderers and those involved in criminal and illegal activities including the Financing of Terrorism.
- Avoid violations, since they may result in criminal, civil and regulatory sanctions and/or penalties/fines imposed.
- Protect Group's reputation by protecting the Group and its employees from unfounded allegations of facilitating Money Laundering and Terrorist Financing.
- Create a high standard of compliance culture among all the staff across the Group.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.3.2 Integration of Governance performance of counterparties in Governance arrangements (continued)

The Group through this policy ensures that the legal and regulatory requirements stemming from the provisions set out in the Law 188(I) 2007 and the 6th edition of the Central Bank of Cyprus Directive for the prevention of Money Laundering and Terrorist financing, are addressed.

In addition, the Group adopted a Sanction Policy to manage the risk of sanctions violation. The purpose of the Policy is to ensure Group's full compliance with sanctions or restrictive measures imposed on countries, territories, entities, or specific persons and bodies. The policy is readily available for all employees in the Group's internal portal and Group's website for all stakeholders. The Sanctions Policy outlines the legal and regulatory requirements/principles emanated from the provisions set out in (a) criminalization of the Violation of Union Restrictive Measures Law 2025, and (b) the 1st edition of the Central Bank of Cyprus Directive for Compliance with the Provisions of UN Security Council of the European Union. In addition to UN, EU sanctions, the Group fully adheres to sanctions imposed by the US and the UK. The policy covers both upstream and downstream value chain.

The Board bears the ultimate responsibility for the effective implementation of the above-mentioned Policies and for setting the right tone from the top. The AC makes sure that sufficient, dependable, and secure internal procedures are in place to ensure that the Group complies with the above-mentioned policies and monitors the effective implementation of those Policies through the Control Functions. The Internal Audit Division is responsible for providing independent and objective assurance to the Board, through the AC, and to management, by assessing the effectiveness of governance, risk management, and control processes related to these policies and informs the AC of any findings and relevant recommendations.

The Group also adopted a Fraud Risk Management Policy (applicable to activities in both upstream and downstream) which sets out the appropriate steps to be followed for managing Internal and External Fraud risks within the Group. The purpose of this Policy is to set out the minimum requirements and basic principles underlying the governance and management of Fraud Risks in the Group, providing guidelines on the prevention, detection, investigation, and response of actual (perpetrated) and suspected Fraud. The policy is readily available for all employees in the Group's internal portal. The Policy aims to safeguard the Group and internal or external stakeholders' interests.

The overall responsibility for approving and monitoring the Group's strategy and policy for managing Fraud risk lies with the Board, which exercises this responsibility through the RC. The RC annually reviews the adequacy and effectiveness of the internal controls system, including areas related to Fraud Risk Management (FRM), based on data and information produced by the Internal Audit division and the Fraud Risk Management (FRM), the observations and comments of the competent supervisory authorities as well as the assurance provided by the CEO and make appropriate recommendations to the Board.

During the transitional period, from the date of acquisition until full integration of Ethniki Insurance Cyprus with Eurolife and General Insurance, there were procedures in place to ensure consistent approach of Ethniki Insurance Cyprus in applying the BOCH Group Prevention of Money Laundering and Terrorism Financing Policy.

The key element of the Group's Financial Crime Compliance Framework is Customer Due Diligence. Customer Due Diligence includes the following:

- ascertaining the identity of the customer before establishing a business relationship or making a one-off transaction;
- establishing the Ultimate Beneficial Owner of legal entities taking particular care on the identification of the true owners of trusts, foundations, client accounts and other similar entities;
- building a detailed Economic Profile of the Customer;
- undertaking Enhanced Due Diligence for High and Significant Risk Customers and transactions;
- updating the identification data of customers on a regular basis;
- Detecting suspicious activities/transactions and where appropriate, reporting such activities/transactions to the local FIU.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.3.2 Integration of Governance performance of counterparties in Governance arrangements (continued)

The Group also implements specialised software packages for the continuous monitoring of the customers' accounts, to enable suspicious transactions to be recognised and to maintain procedures for the reporting of such transactions to the appropriate authorities. The Group through specific procedures and circulars established a specific process to identify and manage specific, general, sectoral sanctions imposed by the UN, EU, US and the UK and focused prohibitions on the export / import of commercial and dual-use goods, software and technology issued by the Council of the European Union, or subject to U.S. jurisdiction under the Export Administration Regulations sanctions.

The Group established a Fraud Risk Management program with the following main components to identify, prevent, detect and respond to Fraud Risk:

- **Fraud risk identification and assessment:** The risk of Fraud is identified, assessed and monitored in all activities through established methodologies and processes. Fraud risks are scored and suitably prioritised for action. The Group identifies inherent Fraud risk through an assessment of incentives, pressures and opportunities to commit fraud. The Group assesses likelihood and potential impact of residual Fraud risk. The Group responds to reasonably likely, significant fraud risks through identification and implementation of effective controls or detection procedures for the risks identified.
- **Fraud prevention:**
 - **Process-level controls:** Business lines supported by Fraud Risk Management (FRM) department, Organisation (OD) and Digital Transformation departments developed and implement appropriate anti-Fraud control procedures and mechanisms for all relevant business processes that either prevent or minimise the likelihood and/or the potential impact of Fraudulent Conduct.
 - **Transaction level controls:** Reviews of third-party and related-party transactions are established throughout business processes. These controls are driven by appropriate know-your-customer/client (KYC), know-your-intermediary (KYI) and know-your-staff (KYS) procedures, as well as background checks on suppliers and business partners, to indicate potential entities that bear higher risk of Fraud.
 - **Awareness:** Ensure that all employees receive training on Code of Conduct, Fraud trainings as well as training on any updates or changes on related processes and procedures.
- **Fraud detection:**
 - **Business process-level mechanisms:** Business processes and procedures are designed so that they accommodate and integrate the systematic identification of the types of Fraud schemes that can be perpetrated in relation to the specific business process.
 - **Key Fraud Indicators:** Key Fraud Indicators (KFIs) are established and updated to monitor variables, which may indicate the possibility of Fraud. Breach of relevant KFIs or adverse trend indications provide early warning for high-risk Fraud areas and must trigger further assessment of the necessary controls in that area and the residual risk.
 - **Other detection mechanisms:** Includes IA reports, periodic reviews by regulators or findings and reports from other expert external business partners.
 - **Proactive Fraud detection procedures:** Automated data analysis, continuous Monitoring techniques, and appropriate technology tools to effectively detect Fraudulent Activity
 - **Internal Fraud reporting channels:** Report fraud incidents to Internal Audit, Compliance or Fraud Risk Management Department or through whistleblowing channels.
 - **Other external reporting channels:** Complaint Management system.
- **Fraud investigation and response:** The Internal Audit Director is responsible to assess reports related to alleged or suspected internal Fraudulent Conduct involving the Group's activities or the members of governing bodies and employees, carry out an investigation of actual or suspected Internal Fraud and report findings to the AC, as well as the CEO or any other reporting line, on a need-to-know basis.

The above-mentioned actions are ongoing and associated with both upstream and downstream activities.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.3.2 Integration of Governance performance of counterparties in Governance arrangements (continued)

There are no measurable, time-bounded and outcome oriented targets nevertheless there are indicators which monitors the effectiveness of these actions. The Group through the Risk Appetite Statement establishes certain qualitative indicators to monitor risks associated with Financial Crime, Sanctions and Fraud risks:

1. No tolerance for violations of sanctions or other measures imposed by American Authorities such as the US Department of Treasury’s Office of Foreign Assets Control (OFAC), the United Nations, the European Union and the United Kingdom’s His Majesty’s Treasury. In case of such deviations, immediate rectification and investigation actions are enacted. No tolerance for deviations with regards to the opening of accounts in US Dollars for persons connected with countries subject to strict sanctions.
2. BoC maintains a zero tolerance for regulatory fines. Consequently, non-compliance to regulatory requirements immediately trigger mitigation/ rectification actions.

The Group ensures relevant trainings are conducted to support mitigation of Financial Crime risks.

Compliance with Laws and Regulations

The Group adopted a Compliance policy which sets out the business and legal environment applicable to the Group, the principles and responsibilities for compliance and how these responsibilities are allocated and carried out at group and entity level. The policy is readily available for all employees in the Group's internal portal and Group's website for all stakeholders. The policy covers operations at Group level.

The Board bears the ultimate responsibility for the effective implementation of the above-mentioned Policies and for setting the right tone from the top. The AC makes sure that sufficient, dependable, and secure internal procedures are in place to ensure that the Group complies with the above-mentioned policies and monitors the effective implementation of those Policies through the Control Functions. The Internal Audit Division is responsible for providing independent and objective assurance to the Board, through the AC, and to management, by assessing the effectiveness of governance, risk management, and control processes related to these policies and informs the AC of any findings and relevant recommendations.

During the transitional period, from the date of acquisition until full integration of Ethniki Insurance Cyprus with Eurolife and General Insurance, there were procedures in place to ensure consistent approach of Ethniki Insurance Cyprus in applying the BOCH Group Compliance Policy.

The Regulatory Compliance Department is responsible for ensuring that the Group adheres to all applicable regulatory, legal, and compliance obligations. It is dedicated to implementing appropriate controls and procedures to safeguard the interests of clients and other stakeholders. A network of Compliance Liaisons, Business Risk Compliance Officers, and Subsidiary Compliance Officers is positioned in all major departments and business functions within the Group to support the monitoring activities of the Compliance Function, thereby ensuring full compliance with both internal and external obligations.

The Compliance Management System automates the majority of compliance procedures, offering an integrated platform equipped with a comprehensive suite of tools designed to address regulatory risks. It also offers real-time updates on any new or amended regulations, supports tracking of issues and actions. The Regulatory Compliance Department conducts regular reviews using the Compliance Review Methodology.

Significant non-compliance cases are identified through the application of the Three Lines of Defence model. The first line comprises business management, who have direct ownership and responsibility for risk management, including the implementation of controls and corrective measures. The second line encompasses oversight functions, such as Compliance, which establishes policies, monitors risks, and offers guidance and assurance. The second line is responsible for developing and maintaining an effective risk and compliance framework to support management in the delivery of its business and strategic objectives. The third line is represented by the Internal Audit Division, which conducts independent assessments of the effectiveness of governance, risk management, and internal controls. The above-mentioned actions are ongoing and associated with Group's own operations.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.3.2 Integration of Governance performance of counterparties in Governance arrangements (continued)

There are no measurable, time-bound, or outcome-oriented targets in place; however, indicators exist to assess the effectiveness of these actions, beyond the monitoring of regulatory fines and reprimands. One case of non-compliance with laws and regulations occurred in 2025 (2024: zero). Following an investigation by the Consumer Protection Service, a non-material fine imposed on the Bank upon identification of unfair and partly unfair clauses embedded in the terms of the consumer housing loan contracts. The Group took the necessary corrective actions and mitigation measures to address the issue and comply with laws and regulations. An action plan is in progress whereby corrective actions have been implemented to ensure that no such terms will be embedded in future contracts and that the clients were notified. The EXCO and AC were involved and thoroughly informed. None of these incidents related to bribery and corruption in 2025 and 2024.

Through the Risk Appetite Statement, the Group defines qualitative guidelines related to Compliance Risks and maintains zero tolerance for any breaches of regulatory, legal, or compliance obligations.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

16.3.3 Risk Management

At the basis of the Double Materiality Assessment under ESRS, the Group has identified Business conduct as a governance risk driver including aspects of corporate culture and management of relationships with suppliers including payment practices. Business conduct has been qualitatively assessed and is understood to potentially impact, as risk drivers, the main prudential risks such as credit, market, liquidity and other non-financial risks including reputational risk. BOC PCL undertook a comprehensive qualitative analysis of potential transmission channels with regards to governance risks in 2025 and are disclosed in Section 16.1.3.

BOC PCL implemented an ESG Due Diligence process on ESG factors within the context of its underwriting processes amending its policies and procedures in such a way that potential impact from ESG is reflected in the fundamental elements of the creditworthiness assessment i.e., in repayment capacity and collateral assessment. Through this process, counterparty governance information will be collected.

Recognition of Governance issues in the ESG Client Questionnaires

As mentioned earlier in Section 16.1.2.1, BOC PCL employs ESG client questionnaires to identify and assess ESG matters as part of its ESG Due Diligence process. BOC PCL has incorporated the following governance aspects into its ESG questionnaires which are used to assess customer's performance under various ESG matters:

Governance Area	Assessment under ESG Due Diligence Questionnaire
Ethical Considerations	Whether the counterparty adheres to code of conduct and code of ethics and whether the counterparty implements processes and/or policies associated with human right
Strategy and risk management	Whether the counterparty enhanced strategy to be aligned with ESG framework
Inclusiveness	Whether the counterparty implements processes or policies associated with equality, diversity and inclusiveness. Number of employees split between Male and Female for Board of Directors, Senior Management and all staff.
Transparency	Whether the counterparty publishes performance on sustainability matters and the relevant initiatives and standards applied on sustainability statements
Internal communication on critical concerns	Whether the counterparty implements whistleblowing processes and procedures
Privacy	Whether the counterparty implements a Data Privacy Policy
Information Security	Whether the counterparty implements an Information Security Policy
Compliance with laws and regulations	Whether the counterparty received any fines associated with legal cases

In addition, BOC PCL's Lending Policy as part of determining the creditworthiness of legal entities requires that the following are assessed:

- i. Qualitative elements, such as the customer's corporate governance (for example delegation of authority checks and balances, accountability, strategy formulation, managerial skills, succession, commitment of shareholders, pricing power of the company in the market etc.) including dividend policy, compliance with audit requirements for financial accounts and compliance with tax obligations.
- ii. The borrower's exposure to ESG factors. This is a general guideline rather than a prescriptive process.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

17. Remuneration Policy and Practices

The Bank of Cyprus Group Remuneration Policy is aligned with the European Banking Authority (EBA) guidelines on Sound Remuneration Policies and Practices (as amended) and captures provisions from relevant Directives and Guidance of the EU, the ECB and the CBC including, but not limited to, the CBC Directive on Internal Governance of Credit Institutions 2021, the CSE Corporate Governance Code, MiFID II, ECB Guide on climate related and environmental risks, Guidelines on the Remuneration Practices, the Gender Pay Gap and Approved higher Ratios, as well as the UK Corporate Governance Code. The Group Remuneration Policy aims to align the remuneration of directors, Executive Management, officers and staff with the business strategy, objectives and long-term interests of the Group. It is consistent with the effective management of risks and does not encourage excessive risk-taking.

17.1 Board Human Resources and Remuneration Committee (HRRC)

17.1.1 The Role of the HRRC

The HRRC is responsible for the development and periodic review of the Group Remuneration Policy which is presented to the Board for approval. In addition, the Board, through the HRRC, is ultimately responsible for monitoring the implementation of the Group Remuneration Policy.

The role of the HRRC is:

- To oversee that the Group is equipped with the human capital at the right size and with the right skill mix necessary for the achievement of its strategic goals, whose reward will be based on personal performance and Group results.
- To oversee that the Group is equipped with the organisational capital to be able to effect continuous improvement and elicit the right behaviour which would lead to the desired outcome.
- To oversee that the Group is equipped with the information capital and the technology necessary to facilitate process improvements that will create a comparative advantage in the market and sustainability for the future.
- To review, agree and recommend to the Board the overarching principles and parameters of compensation and benefits policies across the Group and exercise oversight for such issues.
- To review the remuneration arrangements of the executive Directors of the Group, senior management and the Group Remuneration Policy bearing in mind the EBA Guidelines on remuneration policies and practices, the CBC Governance Directive, the UK Code, the CSE Code and any other applicable or regulatory requirements.
- To oversee the implementation of Strategic HR initiatives which promote and are aligned with the Group's ESG ambition, strategy and objectives.

The HRRC, through a formal and transparent process, considers, agrees, recommends to the Board and keeps under review an overall remuneration policy for the Group (the "Group Remuneration Policy") on an annual basis which:

- applies to all executive directors, senior management and other staff across the Group;
- aligns remuneration with job value, individual performance and potential;
- takes into account market conditions;
- is aligned with the Group's long-term business strategy and objectives, its values and its long-term interests;
- is in line with the regulatory framework;
- is aligned with the Group's capital and liquidity availability, the interests of its shareholders, does not encourage excessive risk taking and ensures an appropriate balance between fixed and performance-related remuneration, immediate and deferred remuneration;
- jointly with NCGC reviews and recommends for approval to the Board the remuneration packages of executive members of Group Board vis-à-vis their performance;
- reviews remuneration packages of senior management and other key personnel whose total annual fixed remuneration is equal to or greater than €500 thousand as follows:

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

17.1.1 The Role of HRRC (continued)

- **All Divisional Directors that report directly to the CEO or Deputy CEO & Chief of Business or one of the EXCO members, General Managers of major subsidiaries (EuroLife, GIC) and other employees whose total annual remuneration is equal to or greater than five hundred thousand (500,000) euros** : Within the Group Remuneration Policy and the recommended level and structure of remuneration for senior management, the Committee reviews and recommends to the Board for approval their remuneration packages, (including salary, pension policy or any additional provident fund, contributions, option plans and other types of compensation), as recommended by the CEO in cooperation with HR.
- **Divisional Directors that report to Board Committees (Risk Management, Internal Audit, Compliance, Information Security)**: Within the Group Remuneration Policy and the recommended level and structure of remuneration for senior management, the HRRC reviews and recommends to the Board for approval their remuneration packages, as recommended by the respective Committee (RC and AC) in cooperation with Human Resources.
- proposes to the Board for approval, the fees payable to the Chairperson and Vice Chairperson of the Board.

17.1.2 Composition and Meetings of the HRRC

The HRRC has a minimum of 3 members who are appointed by the Board on an annual basis. In 2025, the Committee comprised of 4 members, all of whom are independent. Mr Andrian Lewis, a member of the Board since 17 November 2023, became the Chair of the HRRC on 21 June 2024 following the sudden death of Mr Constantine Iordanou.

The HRRC held 11* meetings at Group level in 2025, with 10 meetings being scheduled meetings, and one being a written resolution. Ad hoc meetings take place whenever called by the chairperson of the Committee. The quorum for a meeting is assumed to be when 2 members or 50% rounded up, whichever is the highest. The HRRC keeps detailed minutes of its meetings. The HRRC has authority to obtain independent advice and information from external parties whenever this is considered necessary.

In 2025, the HRRC focused on several key priorities including, but not limited to, the implementation of variable pay plans (both short-term and long-term), the review of the Remuneration Policy and Material Risk Takers, the review of the Performance Appraisal Framework and Target Setting (OKRs), the 2025 Learning & Development Plan and the monitoring of transformational and people related initiatives as well as the gender pay gap.

The HRRC reviewed its terms of reference once during 2025 to ensure continuing appropriateness and full alignment with regulatory framework.

17.1.3 Relevant Stakeholders

The HRRC ensures that internal control functions (i.e. Internal Audit, Risk Management and Compliance) and the Human Resource Division (HRD) are involved in the design, review and implementation of the Group Remuneration Policy.

In developing its Group Remuneration Policy, the Group takes into account the provisions that are included in the CSE Code, the UK Code as well as the CBC Directive on Internal Governance of Credit Institutions 2021 and incorporates the requirements for Remuneration Policies included in CRD V, as well as the regulatory restrictions currently pertinent to the banking sector.

* In addition, during 2025, 3 meetings of joint HRRC/NCGC, 1 meeting of the joint HRRC/AC and 1 meeting of the joint HRRC/RC were held.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

17.2 Remuneration Schemes

Remuneration schemes in BOC PCL are subject to stakeholder consultation and are largely determined by the collective agreement with the Trade Union. They are also in line with the prevailing regulations and guidance. Remuneration typically consists of fixed plus variable pay.

17.2.1 Fixed Remuneration

Fixed Remuneration refers to the staff's main form of remuneration. It comprises of salary and any applicable (including non-discretionary) position allowances and is determined by employment contracts, collective agreements (where applicable) and employment legislation.

- **Fixed Remuneration is based on the following criteria:**
 - **Job Value:** The focus is on the job (requirements and contribution to the Banks business results) rather than the job holder's seniority or education.
 - **Individual contribution and potential:** The focus is on the employee's performance over time, his/her level of experience and his/her potential to undertake upgraded duties.
 - **Applicable legislation, regulations and collective agreement.**
- **Changes in fixed remuneration:**

Changes in fixed remuneration can be effected in the following cases:

 - I. Annual Increments (Pay movement within Pay Scale):**
 - Granted to all employees based on tenure (annually, in January of each year).
 - The amount is fixed and is linked to the employee's salary scale.
 - Governed by the applicable provisions of the collective agreement.
 - II. Promotions (Pay movement across Pay Scales):**
 - Granted to selected employees on the basis of well-defined criteria (assumption of higher duties & responsibilities, job value, performance, potential, years of service / years at position).
 - Under normal circumstances, promotions to a higher salary scale are accompanied by the granting of an additional annual increment (of the new salary scale).
 - Governed by the applicable provisions of the collective agreement.
 - III. Other Increases (Ad hoc):**
 - In exceptional cases (e.g. as a defensive measure), BOC PCL has the discretion to grant a salary increase to specific members of staff, subject to a well-defined approval process.
 - IV. Collective Agreement Renewal/Renegotiation**

Additional salary increases may be granted to members of staff to satisfy collective agreement renewal terms. The latest collective agreement that was renewed in December 2025.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

17.2.2 Variable Remuneration

Variable remuneration refers to the additional discretionary remuneration paid to an individual as an incentive for increased productivity and competitiveness. It is based on the performance of the specific individual, the overall performance of the business unit the individual belongs to, the Group's consolidated financial results and the prevailing economic market conditions.

Variable remuneration might include financial instruments such as cash bonus schemes, performance shares or share option plans, at the discretion of the Bank. Variable remuneration should reflect a sustainable and risk adjusted performance.

For the LTIP - Section 17.2.4 the assessment of the performance is set in a multi-year framework in order to ensure that the process is based on longer-term performance and that the actual payment of performance-based components of remuneration is spread over a period which takes into account the underlying business cycle of the Group and its business risks.

Variable remuneration provisions are embedded in the Financial Plan. The assessment of the impact of variable remuneration on the plan and the risk profile, is captured in the overall risk assessment of the Financial Plan. This ensures that the same risk measurement methods used for internal risk measurement purposes, including ICAAP and ILAAP assessments, are also applied to the bonus pool. It is also ensured that all current and future risks are taken into account.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

17.2.2 Variable Remuneration (continued)

Variable remuneration aims to:

- a) Elicit the appropriate behaviors that will produce the desired outcome, both in the short and long term;
- b) Increase employee's commitment towards the achievement of the Group's long-term objectives within a given set of values;
- c) Enhance employee's performance over a long-term basis, within the Bank's risk-taking framework;
- d) Align employee's long-term interests with those of the Bank's shareholders;
- e) Ensure that the value created is shared fairly between employees and shareholders, and
- f) Retain high performers and attract talent.

Up to 100% of variable remuneration is subject to claw back and malus in accordance with criteria which include the following:

- Evidence of misbehavior or serious error by the staff member (e.g. breach of Employee Code of Conduct, Code of Ethics, Employment Contract and other internal rules, especially concerning risks and compliance);
- When the Bank and/or the business unit in which the staff member works subsequently suffers a significant downturn in its financial performance;
- When the employee leaves the Group;
- When there are significant changes in the Bank's economy, or capital base;
- Manipulation of financial performance or window dressing practices, and
- Hedging against a downward adjustment in compensation.

Any deviations from the Remuneration policy with regards to the maximum level of variable remuneration that can be granted are examined by HRRC and are submitted to the Board of Directors for recommendation by shareholders.

The AGM resolution that was approved by the shareholders in May 2024, gave the Bank the flexibility to increase the ratio of variable to fixed remuneration to up to a maximum of 100% for Material Risk Takers.

In case the Group benefits from government intervention, then all restrictions that derive from the relevant legislation will apply.

There were severance payments awarded during 2025 and 2024 (full amount paid). These relate to the Voluntary Separation Scheme (not performance related) that was in place during 2025 and 2024.

The Group did not benefit from any derogation laid down in Article 94 (3) of Directive 2013/36/EU.

17.2.3 Merit Pay

Merit pay increases are governed by the applicable provisions of the collective agreement with the Trade Union and are granted in the form of an additional amount over and above the annual increment. These increases are granted to c.50% of the staff, on the basis of predefined criteria. Merit Pay decisions are taken by the Merit Pay Committee which is set up jointly between the Bank and the Trade Union.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

17.2.4 Short-Term and Long-Term Incentive Plans (e.g. Performance Shares or Share Option Plans)

Short-Term Incentive Plan

Short-term incentive award refers to a Short-Term Incentive Plan (the 'STIP') first introduced by the Group in 2023. This is an annual incentive which involves variable remuneration in the form of cash, or a combination of cash and shares, to selected employees, and is driven by both delivery of the Group's Strategy, as well as individual performance, in the relevant year. Executive Management are also eligible to be considered for the short-term incentive award.

STIP awards may be granted either in cash or a combination of cash and shares, and may be deferred, in line with applicable regulatory requirements and other remuneration restrictions, provided the Group achieves its pre-defined financial targets.

The performance of the Group and each eligible employee will be evaluated after the end of each respective performance period.

Long-Term Incentive Plan

At the Annual General Meeting of the shareholders of the Company which took place on 20 May 2022, a special resolution was approved for the establishment and implementation of the share based Long-Term Incentive Plan (the 'LTIP') of Bank of Cyprus Holdings Public Limited Company.

Share Awards Notifications have been given to eligible participants under LTIP during 2022, 2023, 2024 and 2025 as described below.

The LTIP is an equity-settled share-based compensation plan for executive directors and senior management of the Group. The LTIP provides for an award in the form of ordinary shares of the Company based on certain non-market performance and service vesting conditions. Performance is measured over a three-year period. The performance conditions are set by HRRC each year and may be differentiated at the HRRC's discretion to reflect the Group's strategic targets and employee's personal performance. Performance will be assessed against an evaluation scorecard consistent with the Group's Medium Term Strategic Targets containing both financial and non-financial objectives and including targets in the areas of: (i) Profitability; (ii) Asset quality; (iii) Capital adequacy; (iv) Risk control & compliance; and (v) Environmental, Social and Governance ('ESG') targets and (vi) Customer Experience (targets in the area of Customer Experience have been introduced for non-control functions from 2024).

As per the applicable regulatory framework, up to 100% of the award will be subject to malus and claw back provisions. Under certain circumstances the HRRC has the discretion to determine whether the award will lapse and/or the extent to which the award will be vested.

In March 2025, the Board of Directors via the HRRC, approved the granting of awards for the 3-year performance period 2025-2027, as per the terms of the approved LTIP and the relevant authority provided from the Shareholders at the 2022 AGM. The design parameters, eligibility and target award levels are the same as those for the 2022 awards. The Key Performance Indicators, and relevant weights are largely the same as those of the 2022 awards, though targets and thresholds have been updated in accordance with the Bank's financial plan for the current performance period. Notably, two new KPIs have been introduced within the Profitability Area: (i) Non-NII/Cost and (ii) Net Interest Margin (NIM), whilst the KPI 'Organic Capital Generation' has been removed.

The maximum number of shares that may be issued pursuant to the LTIP until the tenth anniversary of the relevant resolution shall not exceed 5% of the issued ordinary share capital of the Company, as at the date of the resolution (being 22,309,996 ordinary shares of €0.10 each), as adjusted for any issuance or cancellation of shares subsequently to the date of the resolution (excluding any issuances of shares pursuant to the LTIP).

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

17.2.4 Short-Term and Long-Term Incentive Plans (e.g. Performance Shares or Share Option Plans) (continued)

Following the recommendation of the HRRRC, the Board of Directors, having examined the performance of the Bank during the period 2023-2025 against the targets set at the beginning of the period, and further to a risk assessment, approved the granting of the awards for the said performance period as shown below. The achievement against the targets set was assessed to be at 100%.

The shares granted will vest according to the deferral cycle described below and are subject to malus and claw back conditions as per the applicable regulatory framework and the plan rules.

2026	2027	2028	2029	2030	2031
40%	12%	12%	12%	12%	12%

17.2.5 Non-Monetary Incentives

The BOC PCL has in place a Team Incentive scheme which is incentivising employees of the front line (Consumer and SME, Corporate Banking, International Business, Insurance Business) based on predefined KPIs. The awards given are all non-monetary and take the form of Hotel Accommodations or Weekend Trips for the whole team, so as to promote also the team bonding and team collaboration.

17.2.6 Control Functions Pay

Remuneration of staff engaged in control functions (Internal Audit, Risk Management, Compliance and Information Security) must be weighed in favour of fixed remuneration so as to reflect the nature of their responsibilities. Staff engaged in control functions is compensated in accordance with the achievement of the objectives linked to their functions, independent of the performance of the business areas they control.

17.2.7 Pension Fund obligation risk

Pension obligation risk is the risk caused by BOC PCL contractual or other liabilities to or with respect to a pension scheme. It also covers payments BOC PCL may make because of a moral or other obligation. BOC PCL has immaterial exposure to pension schemes and therefore there is no additional capital requirement for pension risk.

17.3 Design and Structure of Remuneration

17.3.1 Non-Executive Directors

The remuneration of non-executive directors is not linked to the profitability of the Group. The remuneration of non-executive directors is related to the responsibilities and time devoted for Board meetings and decision-making for the governance of the Group, and for their participation in the committees of the Board and the boards of Group subsidiary companies. The shareholders' AGM held on 16 May 2025 approved an increase in the annual remuneration of the Chairperson of the Board and the remuneration of the non-executive members. The remuneration for the Vice-Chair and the Senior Independent Director remains unchanged.

Non-Executive Directors are not eligible for variable remuneration or participation to a share option scheme.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

17.3.2 Executive Directors

Remuneration Policy

The HRRC, jointly with the NCGC, is responsible to review and recommend for approval to the Board the remuneration packages of Executive Directors vis-à-vis their performance. In line with the UK Code the following factors are also considered: clarity, simplicity, risk, predictability and proportionality and finally alignment to culture. Both the CEO and the Executive Director Finance are employees of BOC PCL.

Contracts of Employment

The remuneration (salary and bonus) of Executive Directors is set out in their employment contracts which can have a maximum duration of five years, unless any of the Executive Directors is an appointed member of the senior management team, in which case the terms of employment are based on the provisions of the collective agreement in place, except for the CEO.

The Group at present does not grant guaranteed variable remuneration or discretionary pension payments.

Service Termination Agreements

The employment contract of Mr Panicos Nicolaou, CEO, includes a clause for termination, by service of six months' notice to that effect by the executive director on grounds of change of control.

The terms of employment of Ms Eliza Livadiotou, Executive Director Finance and executive member of the Board, are mainly based on the provisions of the collective agreement in place, which provide for notice or compensation by the BOC PCL based on years of service and for a four-month prior written notice by the executive director, in the event of a voluntary resignation.

Bonus

An amendment to the Director's Remuneration Policy was approved at the 2024 AGM to extend the STIP to include the granting of share awards, subject to the terms and condition of the Short-Term Incentive Plan and any regulatory restrictions. The 2024 Remuneration Policy also clarifies that the variable remuneration of Executive Directors is capped at the ratio set out in the Group-wide Remuneration Policy in accordance with the applicable regulatory framework (maximum 100% ratio variable to fixed remuneration approved by the shareholders in May 2024).

The STIP award may be granted either in cash or a combination of cash and shares, and is subject to deferral, in case total variable pay for an individual exceeds a certain threshold, in line with applicable regulatory requirements and other remuneration restrictions. A retention period of 12 months will be applicable to each tranche of vested shares.

For the performance year 2025 a Short-Term Incentive Plan was set up, in which Executive Directors are eligible to participate, subject to the achievement of certain financial criteria and performance conditions. The assessment for the Executive Directors has been completed and amounts to be granted for the performance year 2025 have been approved by the relevant Board Committees and the Board in March 2026 and include amounts expected to vest in 2026 and amounts to be deferred in following years and subject to continuing employment, as per the plan's deferral cycle.

Retirement Benefit Schemes

The CEO participates in a defined contribution plan largely on the same terms as other employees. The Executive Director Finance participates in a defined contribution plan on the same basis as other employees.

Share Options

No share options were granted to the Executive Directors during 2025 or 2024.

Long-term incentive plan

Share Award have been awarded under a long-term incentive plan to the Executive Directors during 2022, 2023, 2024 and 2025 as described in Section 17.2.4.

Other Benefits

Other benefits provided to the Executive Directors include other benefits provided to all staff/other categories of staff (e.g. company car or car allowance, medical fund contributions and life insurance).

17.5 Additional Information

Every year, the HRRC proposes to the Board, the Annual Remuneration Policy Report which forms part of the Annual Corporate Governance Report of the Group. The Remuneration Policy Report is submitted to the shareholders' AGM for approval.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

18. Leverage

The leverage ratio is calculated by dividing the Tier 1 capital with total leverage exposure measure. It is expressed as a percentage and it is reported on a transitional basis.

The Group's leverage ratio is set as a Recovery Plan Indicator (RPI) and monitored on a quarterly basis. Its level is measured against a defined early warning and an in-breach threshold. The early warning threshold is high enough to allow adequate time to evaluate the position and trend. In the case of an in-breach threshold violation, the violation is escalated to the Executive Committee and subsequently to Board's Risk Committee if needed and a discussion can take place about whether any of the recovery plan provisions need to be considered/executed.

As at 31 December 2025, the leverage ratio of the Group was 8.53% (31 December 2024: 8.75%). The increase in Total Assets during the year has been the main driver for the decrease in leverage ratio which stands well above the regulatory minimum requirement of 3% introduced with CRR II that came into force on 28 June 2021.

Sections 18.1 to 18.3 below provide analyses on the leverage ratio components.

Pillar 3 Disclosures 2025

18.3 Split-Up of on-Balance Sheet Exposures (excluding derivatives and SFTs)

The table analyses the on-balance sheet exposures which form part of the leverage exposure measure by Credit Risk exposure classes under the Standardised Approach in calculating RWA.

EU LR3 - LRSpl: Split-up of on balance sheet exposures (excluding derivatives, SFTs and exempted exposures)

		a	b
		CRR	
		Leverage ratio exposures	
		31 December 2025	31 December 2024
		€ million	€ million
EU-1	Total on-balance sheet exposures (excluding derivatives, SFTs, and exempted exposures), of which:	25,616	24,312
EU-2	Trading book exposures	-	-
EU-3	Banking book exposures, of which:	25,616	24,312
EU-4	Covered bonds	554	432
EU-5	Exposures treated as sovereigns	11,753	10,865
EU-6	Exposures to regional governments, MDB, international organisations and PSE not treated as sovereigns	9	17
EU-7	Institutions	965	1,208
EU-8	Secured by mortgages of immovable properties	8,210	3,978
EU-9	Retail exposures	853	1,753
EU-10	Corporates	1,997	3,824
EU-11	Exposures in default	45	121
EU-12	Other exposures (eg equity, securitisations, and other non-credit obligation assets)	1,229	2,114

There is an increase in banking book exposures for which Section 11 provides information on movements between the various exposures' classes.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

19. Liquidity Requirements

Minimum Regulatory Liquidity Requirements
EU limit requirement

The Group LCR is calculated monthly by MLR and sent to CBC/ECB 15 days after the month end.

During 2025, an increase in HQLAs was observed, mainly due to the increase in deposits of c.€1,668 million during the year.

The Group LCR was as follows as at 31 December 2025 and 2024:

Group LCR	2025 %	2024 %
31 December	321	309
Average Ratio ¹	312	324
Highest ratio	330	375
Lowest ratio	293	304

[1] Average ratio represents the average of the end of month ratios for the whole year.

The LCR of the Group amounted to 321% as at 31 December 2025 (31 December 2024: 309%).

The LCR is designed to promote short-term resilience of a Bank’s liquidity risk profile by ensuring that it has sufficient high-quality liquid resources to survive an acute stress scenario lasting for 30 days.

The table below shows a quantitative analysis of LCR which complements Article 435(1) (f) of Regulation No 575/2013.

As per Article 30 (1), (2) and (3) of Commission Delegated Regulation (EU) 2015/61, potential outflows due to derivative and financing transactions are calculated based on:

- a) Credit deterioration of the bank’s credit quality.
 During the actual acute stress period experienced in 2013, additional independent amounts had to be placed by the Bank (reflecting the increased credit risk of the bank as perceived by counterparties). The potential outflow takes into account the percentage increase of independent amounts experienced in 2013 as well as the current outstanding derivatives in terms of notional, the type of derivative and the currency pair in the case of FX swaps.
- b) Adverse market movements affecting the mark to market.

The potential negative impact on the mark to market of derivatives and the underlying collateral of repos is calculated in the case of adverse market movements. The methodology followed is based on the Historical Look Back Approach for market valuation changes as per Commission Delegated Regulation (EU) 2017/208.

With regards to the currency mismatch, it is noted that for US Dollars, the ratio presents a gap when comparing the buffer with its net outflows. The Bank maintains large amounts of customer deposits in USD (included in LCR outflows). The proceeds received are invested in either USD MM placements (which form part of the LCR inflows and not the liquidity buffer) or are converted to Euro through the use of short-term FX Swaps which are very liquid instruments. Some amounts are invested in USD liquid assets in the form of bonds. Thus, although a gap exists, the Bank is in a position to cover any USD requirements either through the cash invested in USD MM placements or by terminating or not renewing the EUR/USD FX Swaps.

The Group also monitors its position against NSFR. The NSFR has been developed to promote a sustainable maturity structure of assets and liabilities. At 31 December 2025 the Group’s NSFR stood at 171% (compared to 162% at 31 December 2024). The increase in NSFR is mainly due to the c. €1.7 billion increase in customer deposits which caused an increase of c. €1 billion in Available Stable Funding. The Required Stable Funding remained largely unchanged.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

19. Liquidity Requirements (continued)

As at 31 December 2025 and 2024, the Group is in compliance with its regulatory liquidity requirements with respect to the LCR and NSFR.

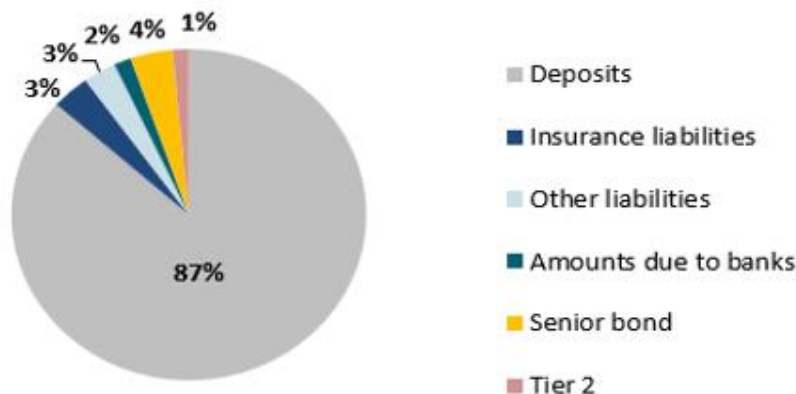

The Group’s Liquidity Risk Policy and limit structure are designed to avoid reaching a crisis point. However, in case a liquidity or a funding crisis arises, the Bank will address it, as analysed in the Liquidity Contingency Plan. A number of internal and regulatory ratios are in place to monitor liquidity.

Current State of Funding and Funding sources

As at 31 December 2025, the Group had available liquids of c. €16.3 billion compared to c.€14.8 billion at the end of 2024. The increase is primarily due to the increase in customer deposits by c.€1,668 million.

As presented in the chart below, as at 31 December 2025 the Group’s liabilities as per the Consolidated Balance Sheet in published financial statements were mainly composed of customer deposits amounting to 87% (2024: 87%).

Dec 2025

Dec 2024

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

19. Liquidity Requirements (continued)

The credit ratings of the Republic of Cyprus by S&P, Moody's and Fitch are at investment grade level as at 31 December 2025. Given this, the Cyprus Government Bonds remain eligible collateral for Euro system monetary operations.

The ECB pool as at 31 December 2025 contained the ACCs and the retained issue of the Bank's covered bond. The ACCs scheme was terminated by ECB on 30 March 2026.

Impediments for the prompt transfer of funds between the parent entity and its subsidiaries

Following the deleveraging of the Bank and the disposal of all its foreign units, the Group's main operations comprise the BOC banking unit. The rest of the other local units (the insurance companies, JCC and CISCO) are immaterial in size and they manage their liquidity independently.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

20. Credit Risk Mitigation Techniques

20.1 Information on Credit Risk Mitigation Techniques

The Group has implemented various methods in order to achieve effective mitigation of credit risk. Some of the most important methods implemented are listed below:

- Identifying the activities / sectors of the economy where the Bank is not willing to finance or may finance under strict conditions.
- Setting of sanctioning limits for all line/Department Managers and the various Sanctioning/ Approving Authorities of the Bank (including the Credit Committee 3). Automation of the credit scoring process/ sanctioning limit decision reduces significantly the risk of a credit application being approved by an incorrect approving authority.
- Setting of thresholds relating to Loan to Value (LTV) Ratios as well as guidelines for taking collaterals especially mortgages on residential and commercial properties.
- Issuing circulars and guidelines concerning the granting of credit which are in line with the regulatory directives.

20.2 Disclosure of the use of credit risk mitigation techniques

On- and off-balance sheet netting

In most jurisdictions in which the Group operates, credit risk exposures can be reduced by applying netting and set-off. Netting is applied on derivative exposures.

ISDA agreements allow for netting of credit risk exposure to a counterparty resulting from derivative transactions against obligations to the counterparty in the event of default and therefore produce a lower net credit exposure. These agreements may also reduce settlement exposure (e.g. for FX transactions) by allowing payments on the same day in the same currency to be set-off against one another. The Bank has signed variation margin agreements in line with EMIR margining requirements and to this effect the netted positions are calculated on a daily basis, and the threshold is set at 0%. Furthermore, CSA which forms part of ISDA, the collateral is passed between the parties in order to mitigate the market contingent counterparty risk inherent in their open positions.

Guarantees and credit derivatives used as credit protection for the purposes of reducing capital requirements

The main type of guarantees counterparties recognised as credit risk mitigants in calculating RWA and capital requirements are:

- a. Government: Guarantees issued by sovereigns are usually governed by the respective law of the country that issues the guarantee, and they should be signed by an authorised representative of the government issuing the guarantee.
- b. Bank: They include guarantees issued by local and foreign banks. Bank guarantees are accepted in line with the various Group limits set by the MLR and which are based on each bank's credit worthiness.
- c. Qualifying Multilateral Development Banks: Explicit guarantees through government/EU support programs for products that satisfy strict minimum requirements under the support programs.

The Group does not have any credit derivatives.

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

20.2 Disclosure of the use of credit risk mitigation techniques (continued)

EU CR3 – CRM techniques overview: Disclosure of the use of credit risk mitigation techniques

31 December 2025	Exposures unsecured – carrying amount	Exposures secured - carrying amount	Of which secured by collateral	Of which secured by financial guarantees	Of which secured by credit derivatives
	€ million	€ million	€ million	€ million	€ million
Total loans and advances to customers	10,123	10,689	10,617	72	-
Total debt securities	5,080	-	-	-	-
Total exposures	15,203	10,689	10,617	72	-
Of which non-performing exposures	3	53	52	1	-
<i>Of which defaulted</i>	3	53			

31 December 2024	Exposures unsecured – carrying amount	Exposures secured - carrying amount	Of which secured by collateral	Of which secured by financial guarantees	Of which secured by credit derivatives
	€ million	€ million	€ million	€ million	€ million
Total loans and advances to customers ¹	9,597	9,848	9,769	79	-
Total debt securities	4,192	-	-	-	-
Total exposures	13,789	9,848	9,769	79	-
Of which non-performing exposures	3	104	103	1	-
<i>Of which defaulted</i>	3	104			

¹ Amounts disclosed exclude loans and advances to customers classified as held for sale

The increase in the investment portfolio as at 31 December 2025 is consistent with the strategy of the Group to grow the fixed income portfolio.

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

20.3 Main Types of Collateral Accepted

The purpose of collateral is to secure the Bank's claims towards a customer when granting a credit facility and it acts as a credit risk mitigant in the case of customer default.

The Bank applies the following criteria in determining the appropriate level and type of collaterals:

- a. The type, size and complexity of the exposure;
- b. The value of the collateral(s) in relation to the size of the exposure;
- c. Any limitations of the collateral;
- d. Eligibility for capital purposes;
- e. Complexity, cost and time to realise in the case of borrower default;

As a principle, the financed asset should be obtained as collateral. The use of alternative property as collateral is acceptable if the following apply: (a) the reason for not obtaining the financed property as collateral is recorded and justified in the application (b) an official valuation is performed for both properties and (c) the title deeds of both properties are submitted. When the collateral is in the name of a third party, the personal/corporate guarantee of the third party is usually obtained. When collateral is obtained, the type, size and duration/maturity of the collateral should be taken into consideration in relation to the facility. Collaterals cover facilities as per agreement with the customer and Bank approval.

Collaterals are classified into two categories:

- a. Own (belonging to the borrower).
- b. Third Party (belonging to third party, not being the borrower).

Collaterals which may be accepted by the Bank to secure credit facilities include, among others, mortgages on immovable property, cash, government, bank, corporate and personal guarantees, assignments of sales contracts, fixed and floating charges on assets, assignment of life/general insurance policies, assignment of receivables and pledge on marketable securities.

20.3.1 Collateral Valuation Policy

It is essential that collaterals offered to the Bank as security are valued at the point of credit origination and also monitored at regular intervals. This ensures that the value of the collateral is still adequate to cover the facilities granted by the Bank and that they can be taken into account for capital adequacy purposes.

20.3.1.1 Mortgages on immovable property (Legal Charge on Property)

Mortgaged property is valued by approved independent valuers based on the standards, policies and procedures set by the Bank's Premises & Valuations Department.

Valuation Values & Other Information

The valuation report presents the following values:

- a. Market Value (MV) of the property is based on the assumption that there is a willing buyer / seller within a logical time period and that an arm's length transaction after a logical marketing period can take place, and where the parties involved had each acted knowledgeably, prudently and without compulsion.
- b. Forced Sale Value (FSV) of a property is calculated at a percentage lower than the market value to estimate the sale price that would be expected on a quick disposal (if required), i.e. the value expected to be reached through a forced sale.
- c. Insurance values: the report includes both the insurance replacement value ("new for old") and insurance current value of the property to be used as guidelines for insurance purposes by the Bank (properties should be adequately and properly insured as per the Bank's guidelines).

BANK OF CYPRUS HOLDINGS GROUP
Pillar 3 Disclosures 2025

20.3.1.1 Mortgages (Legal Charge on Property) (continued)

- d. Environmental, health and safety issues: any serious issues such as physical risks are provided in the valuation report. These factors should be taken into account, and appropriate actions should be taken.
- e. Any other issues that should be brought to the attention of the Bank e.g., issues that affect the marketability of the property and an additional haircut may be adopted on the values provided.

Immovable property collateral should be valued, according to applicable European and international standards, which include the European Valuation Standards (Blue Book) and the Royal Institute of Chartered Surveyors (RICS) standards (Red Book).

External Valuers/Monitoring & Control of Valuations

The selection of an external valuer is based on specific criteria and is the exclusive responsibility of the Premises and Valuations Department, without customer or any other Bank unit / department involvement or intervention. External valuers must be independent of the credit evaluation, approval and granting process. They must not have any conflict of interest regarding the result of the valuation or any interest in the property.

External valuers should not come into contact with customers regarding the valuation, unless this is absolutely necessary in order to complete the valuation (e.g. for buildings where an internal inspection is required or to collect any documents/information relevant to the valuation).

Valuation Frequency/Monitoring

The number and frequency of valuations is described in detail in the Bank's Valuation Policy and is aligned with the regulatory framework and relevant guidelines. This takes into account factors such as the lending amount, the property value, Loan-to-Value thresholds and date of last available valuation.

For the purpose of monitoring and indexing property values the relevant Property price indices (P.P.I's) issued by the Central Bank are used. Residential properties (including land) are monitored against the residential P.P.I. while commercial properties (including land) against the commercial P.P.I. The monitoring rules of the Bank are aligned with the CRR requirements on the monitoring of immovable property collateral.

Pillar 3 Disclosures 2025

Appendix V - Specific References to CRR Articles

CRR ref.	High-level summary	Compliance reference
General Provisions		
6	General Principles	Section 4
13	Application of disclosure requirements on a consolidated basis	Section 4
Disclosure requirements and policies		
431 (1)	Requirement to publish Pillar III disclosures.	Section 2.2
431 (2)	Disclosure of operational risk information.	Section 3.2.4
431 (3)	Institution must have a policy covering frequency of disclosures. Their verification, comprehensiveness and overall appropriateness.	The Group has a dedicated Pillar III policy
431 (4)	All quantitative disclosures shall be accompanied by qualitative narrative	All qualitative narrative is contained within the Report
431 (5)	Explanation of ratings decisions to SMEs upon request.	Not applicable to the Group
Non-material, proprietary or confidential information		
432	Non-material, proprietary or confidential information – EBA Guidelines on materiality, proprietary, confidentiality and on disclosure frequency	The Group discloses all minimum requirements set by CRR and no information has been omitted based on materiality, proprietary or confidential
Frequency and scope of disclosure		
433	Disclosures must be published once a year at a minimum, in conjunction with the date of publication of the financial statements and more frequently if necessary.	Section 2.2
Means of disclosures		
434 (1)	To include disclosures in one appropriate medium or provide clear cross-references to other media.	All applicable disclosures are contained within the Report
434 (2)	Equivalent disclosures made under other requirements (i.e., accounting) can be used to satisfy Pillar III if appropriate.	Cross-references to accounting and other disclosures are indicated in the Report
Disclosure of risk management objectives and policies		
435 (1) (a)	Strategies and processes to manage risks for each separate category of risk.	Sections 3.1 and 3.2
435 (1) (b)	Information on the risk governance structure for each type of risk	
435 (1) (c)	Disclosure on the scope and nature of risk disclosure and/or measurement systems.	
435 (1) (d)	The policies for hedging and mitigating risk, and the strategies and processes for monitoring the continuing effectiveness of hedges and mitigants.	
435 (1) (e)	Declaration approved by the Board on adequacy of risk management arrangements.	Sections 2.2 Pillar III Regulatory Framework, Attestation section Section 3.1.3 Effectiveness of the Risk Management Framework
435 (1) (f)	Concise risk statement approved by the Board.	Section 1 Executive Summary, Risk Profile section
435 (2)	Information, once a year at a minimum, on governance arrangements.	Section 3.3
435 (2) (a)	Number of directorships held by members of the Board.	Section 3.3.2
435 (2) (b)	Recruitment policy of Board members, their experience and expertise.	Section 3.3.1
435 (2) (c)	Policy on diversity of Board members, its objectives and results against targets.	Section 3.3.3
435 (2) (d)	Disclosure of whether a dedicated risk committee is in place, and number of meetings in the year.	Section 3.3.4
435 (2) (e)	Description of information flow on risk to Board.	Section 3.3.5
Disclosure of the scope of application		
436 (a)	Name of institution.	Section 2.1
436 (b)	Difference on the basis of consolidation for accounting and prudential purposes, naming entities that are:	Section 4.1, and Appendix II

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

CRR ref.	High-level summary	Compliance reference
436 (c)	Breakdown of assets and liabilities of the consolidated financial statements prepared in accordance with the requirements on regulatory consolidation	Section 4.1.1
436 (d)	A reconciliation identifying the main sources of differences between the carrying value amounts in the financial statements under the regulatory scope of consolidation	Section 4.1.2
436 (e)	Exposures from the trading book and the non-trading book that are adjusted in accordance with Article 34 and Article 105, a breakdown of the amounts of the constituent elements of an institution's prudent valuation adjustment	Not applicable to the Group
436 (f)	Impediments to transfer of funds between parent and subsidiaries.	Section 19
436 (g)	Capital shortfalls in any subsidiaries outside of scope of consolidation and their names (if any).	Section 2.2
436 (h)	Use of articles on derogations from (a) prudential requirements or (b) liquidity requirements for individual subsidiaries / entities.	Not applicable to the Group
Disclosure of own funds		
437	Requirements regarding capital resources table.	Sections 4.1, 5.1 to 5.3
437 (a)	A full reconciliation of Common Equity Tier 1 items, Additional Tier 1 items, Tier 2 items and the filters and deductions applied to own funds	Sections 4.1 and 5.1
437 (b)	A description of the main features of the Common Equity Tier 1 and Additional Tier 1 instruments and Tier 2 instruments issued by the institution	Appendix III
437 (c)	The full terms and conditions of all Common Equity Tier 1, Additional Tier 1 and Tier 2 instruments;	Section 5.3
437 (d)	A separate disclosure of the nature and amounts of the following: (i) each prudential filter applied pursuant to Articles 32 to 35; (ii) items deducted pursuant to Articles 36, 56 and 66; (iii) items not deducted pursuant to Articles 47, 48, 56, 66 and 79;	Section 5.1
437 (e)	Description of all restrictions applied to the calculation of own funds in accordance with this Regulation and the instruments, prudential filters and deductions to which those restrictions apply	Sections 5.1 to 5.3
437 (f)	Comprehensive explanation of the basis on which capital ratios are calculated where those capital ratios are calculated by using elements of own funds determined on a basis other than the basis laid down in this Regulation.	Not applicable to the Group
437a	Disclosure of own funds and eligible liabilities	Not applicable to the Group
Disclosure of own funds requirements and risk-weighted exposure amounts		
438 (a)	Summary of institution's approach to assessing adequacy of capital levels.	Section 6.1
438 (b)	The amount of the additional own funds requirements based on the supervisory review process	Sections 14 and 3.1.16
438 (c)	Result of ICAAP on demand from competent authority.	Section 3.1.16
438 (d)	The total risk-weighted exposure amount and the corresponding total own funds requirement determined in accordance with Article 92, to be broken down by the different risk categories.	Section 6.1
438 (e)	The on- and off-balance-sheet exposures, the risk-weighted exposure amounts and associated expected losses for each category of specialised lending	Not applicable to the Group
438 (f)	The exposure value and the risk-weighted exposure amount of own funds instruments held in any insurance undertaking, reinsurance undertaking or insurance holding company that the institutions do not deduct from their own funds	Section 6.2
438 (g)	The supplementary own funds requirement and the capital adequacy ratio of the financial conglomerate	Not applicable for the Group
438 (h)	The variations in the risk-weighted exposure amounts of the current disclosure period compared to the immediately preceding disclosure period that result from the use of internal models, including an outline of the key drivers explaining those variations.	Not applicable to the Group
Disclosure of exposure to Counterparty Credit Risk (CCR)		
439 (a)	Description of methodology to assign internal capital and credit limits for counterparty credit exposures.	Section 7

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

CRR ref.	High-level summary	Compliance reference
439 (b)	Discussion of policies for securing collateral and establishing credit reserves.	Section 7
439 (c)	Discussion of policies as regards wrong-way risk exposures.	Section 7
439 (d)	Disclosure of collateral to be provided (outflows) in the event of a ratings downgrade.	Section 7
439 (e)	The amount of segregated and unsegregated collateral received and posted per type of collateral,	Section 7
439 (f)	For derivative transactions, the exposure values before and after the effect of the credit risk mitigation as determined under the methods set out in Sections 3 to 6 of Chapter 6 of Title II of Part Three, whichever method is applicable, and the associated risk exposure amounts broken down by applicable method.	Section 7
439 (g)	For securities financing transactions, the exposure values before and after the effect of the credit risk mitigation.	Section 7
439 (h)	The exposure values after credit risk mitigation effects and the associated risk exposures for credit valuation adjustment capital charge.	Section 7
439 (i)	The exposure value to central counterparties and the associated risk exposures.	Section 7
439 (j)	The notional amounts and fair value of credit derivative transactions; credit derivative transactions shall be broken down by product type; within each product type, credit derivative transactions shall be broken down further by credit protection bought and credit protection sold	Not applicable to the Group
439 (k)	The estimate of alpha where applicable	Section 7
439 (l)	Separately, the disclosures included in point (e) of Article 444 and point (g) of Article 452;	Section 7
439 (m)	For institutions using the methods set out in Sections 4 to 5 of Chapter 6 of Title II Part Three, the size of their on- and off-balance-sheet derivative business as calculated in accordance with Article 273a (1) or (2), as applicable.	Section 7
Disclosure of countercyclical capital buffers		
440 (a)	Geographical distributions of credit exposures	Section 8
440 (b)	Amount of the institution specific countercyclical buffer	Section 8
Disclosure of indicators of global systemic importance		
441	Indicators of global systemic importance	Not applicable to the Group
Disclosure of exposures to credit risk and dilution risk		
442 (a)	Definitions for accounting purposes of 'past due' and 'impaired'.	Section 9.1
442 (b)	Approaches for calculating credit risk adjustments.	Section 9.3
442 (c)	Information on the amount and quality of performing, non-performing and forbore exposures for loans, debt securities and off-balance-sheet exposures, including their related accumulated impairment, provisions and negative fair value changes due to credit risk and amounts of collateral and financial guarantees received	Sections 9.2 and 9.4
442 (d)	An ageing analysis of accounting past due exposures;	Section 9.2
442 (e)	Distribution of exposures by geographical area and industry	Section 9.2
442 (f)	Any changes in the gross amount of defaulted on- and off-balance-sheet exposures, including, as a minimum, information on the opening and closing balances of those exposures, the gross amount of any of those exposures reverted to non-defaulted status or subject to a write-off;	Section 9.2
442 (g)	The breakdown of loans and debt securities by residual maturity	Section 9.1.1
Disclosure of encumbered and unencumbered assets		
443	Disclosures on unencumbered assets.	Section 10
Disclosure of the use of the Standardised Approach		
444 (a)	Names of the nominated ECAIs used in the calculation of Standardised Approach RWAs, and reasons for any changes.	Section 11
444 (b)	Exposure classes associated with each ECAI.	Section 11
444 (c)	Description of the process used to transfer the issuer and issue credit assessments onto items in the Banking book.	Section 11
444 (d)	Mapping of external rating to credit quality steps.	Section 11
444 (e)	Exposure values pre-credit risk mitigation and post-credit risk mitigation, by credit quality step.	Section 11

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

CRR ref.	High-level summary	Compliance reference
Disclosure of exposures to market risk under the standardised approach		
445	Institutions calculating their own funds requirements in accordance with points (b) and (c) of Article 92(3) shall disclose those requirements separately for each risk referred to in those points.	Section 12
445a	Disclosure of CVA risk	Section 11
Disclosure of operational risk		
446	Disclosure of the scope of approaches used to calculate operational risk, discussion of advanced methodology and external factors considered.	Section 13
Disclosure of Key Metrics		
447	Disclosure of Key Metrics	Section 14
Disclosure of exposures to interest rate risk on positions not held in the trading book		
448 (1) (a)	The changes in the economic value of equity calculated under the six supervisory shock scenarios	Section 15.2
448 (1) (b)	The changes in the net interest income calculated under the two supervisory shock scenarios	Section 15.2
448 (1) (c)	Description of key modelling and parametric assumptions	Not applicable to the Group
448 (1) (d)	An explanation of the significance of the risk measures	Section 15.1
448 (1) (e)	The description of how institutions define, measure, mitigate and control the interest rate risk of their non- trading book activities for the purposes of the competent authorities' review.	Sections 15.1 and 15.2
448 (1) (f)	The description of the overall risk management and mitigation strategies for those risks	Section 15.1
448 (1) (g)	Average and longest repricing maturity assigned to non-maturity deposits	Section 15.1
448 (2)	By way of derogation from paragraph 1 of this Article, the requirements set out in points (c) and (e)(i) to (e) (iv) of paragraph 1 of this Article shall not apply to institutions that use the standardised methodology or the simplified standardised methodology referred to in Article 84(1) of Directive 2013/36/EU	Not applicable to the Group
Disclosure of exposures to securitisation positions		
449	Exposure to securitisation positions	Not applicable to the Group
449a	Disclosure of environmental, social and governance risks (ESG risks)	Section 16
449b	Disclosure of aggregate exposure to shadow banking entities	Section 9.6
Disclosure of remuneration policy		
450	Remuneration policy.	Section 17
Disclosure of the leverage ratio		
451 (1) (a)	Leverage ratio and how the institution applies Article 499(2) and (3)	Section 18
451 (1) (b)	Analysis of total exposure measure, including reconciliation to financial statements, and derecognised fiduciary items.	Section 18
451 (1) (c)	Where applicable, the amount of exposures calculated in accordance with Articles 429(8) and 429a (1) and the adjusted leverage ratio calculated in accordance with Article 429a (7)	Section 18.2
451 (1) (d)	Description of the risk management process to mitigate excessive leverage.	Section 18
451 (1) (e)	Factors that had an impact on the leverage ratio during the year	Section 18
451 (2)	Public development credit institutions as defined in Article 429a (2) shall disclose the leverage ratio without the adjustment to the total exposure measure determined in accordance with point (d) of the first subparagraph of Article 429a (1).	The Group follows the implementation standards. Section 18.2
451 (3)	In addition to points (a) and (b) of paragraph 1 of this Article, large institutions shall disclose the leverage ratio and the breakdown of the total exposure measure referred to in Article 429(4) based on averages calculated in accordance with the implementing act referred to in Article 430(7).	Section 18.2
451a (1)	Institutions that are subject to Part Six shall disclose information on their liquidity coverage ratio, net stable funding ratio and liquidity risk management in accordance with this Article	Section 19
451a (2)	Disclose liquidity coverage ratio as calculated in accordance with the delegated act referred to in Article 460(1)	Section 19
451a (3)	Disclose stable funding ratio as calculated in accordance with Title IV of Part Six	Section 19

BANK OF CYPRUS HOLDINGS GROUP

Pillar 3 Disclosures 2025

CRR ref.	High-level summary	Compliance reference
451 (4)	Disclose the arrangements, systems, processes and strategies put in place to identify, measure, manage and monitor their liquidity risk in accordance with Article 86 of Directive 2013/36/EU	Sections 19 and 3.2.3
Disclosure of the use of the IRB Approach to credit risk		
452	Use of the IRB Approach to credit risk	Not applicable to the Group
Disclosure of the use of credit risk mitigation techniques		
453 (a)	Policies and processes, and an indication of the extent to which the Bank makes use of on-balance sheet and off-balance sheet netting.	Section 20.1
453 (b)	Policies and processes for collateral valuation and management.	Section 20.3
453 (c)	Description of types of collateral used by the Bank.	Section 20.3
453 (d)	Types of guarantor and credit derivative counterparty, and their creditworthiness.	Section 20.3
453 (e)	Information about market or credit risk concentrations within the credit mitigation taken.	Sections 3.2.1.4 and 11
453 (f)	For exposures under either the Standardised or the Foundation IRB approach, disclosure of the exposure covered by eligible financial collateral and other eligible collateral	Section 20.3
453 (g)	The corresponding conversion factor and the incidence of credit risk mitigation techniques with and without substitution effect.	Section 11
453 (h)	For institutions calculating risk-weighted exposure amounts under the Standardised Approach, the on- and off-balance-sheet exposure value by exposure class before and after the application of conversion factors and any associated credit risk mitigation	Section 11
453 (i)	For institutions calculating risk-weighted exposure amounts under the Standardised Approach, the risk-weighted exposure amount and the ratio between that risk-weighted exposure amount and the exposure value after applying the corresponding conversion factor and the credit risk mitigation associated with the exposure; the disclosure set out in this point shall be made separately for each exposure class	Section 11
453 (j)	For institutions calculating risk-weighted exposure amounts under the IRB Approach, the risk-weighted exposure amount before and after recognition of the credit risk mitigation impact of credit derivatives; where institutions have received permission to use own LGDs and conversion factors for the calculation of risk-weighted exposure amounts, they shall make the disclosure set out in this point separately for the exposure classes subject to that permission	Not applicable to the Group
Disclosure of the use of the Advanced Measurement Approaches to operational risk		
454	Description of the use of insurance or other risk transfer mechanisms for the purpose of mitigating operational risk.	Not applicable to the Group
Use of internal models for market risk		
455	Use of Internal Market Risk Models	Not applicable to the Group
